Here, though the word *Distributed* in the first of the three conditions decidedly means universal, in the third, as suggested by the words 'something more,' a modification in the way of import is suggested, one that leads to the view suggested by the editor, to whose doctrine the following extract is a preliminary:

By *distributed* is here meant universally spoken of. I do not use this term in the present work, because I do not see why, in any deducible meaning of the word *distributed*, it can be applied to universal as distinguished from particular. - *De Morgan, Formal Logic*, ch. vii.

2. It is submitted that if *Distributed* is to be connected with its etymology, especially with the element *dis*, its meaning must be sought in the middle term of the numerical definite syllogism (or its approximations), and in the syllogism of identity. Thus, if

More than half Y is X,  
and  
More than half Y is Z,  
Some X must be Z,  
vice versa, Some Z must be X.

So also in

Y is X,  
The same Y is Z,  
Some Z is X.

That syllogisms of this kind are wholly ignored by most writers, and but inadequately recognized by others, is well known, an inference from two particular premises being held to be impossible. Without going farther into the question of the rightness or wrongness of this view, it is submitted that it is in a logic wherein the preceding forms are recognized, and in that only, that the connection of the word under notice with its derivation is intelligible; add to which that in a logic like the present, where it keeps its place as a term, but without being any longer appropriate, it is, of course, vague and obscure.

Speaking roughly, *distributed* means Universal. . . . Speaking more closely, it means 'Universal in one premise; it being a rule in the ordinary logic that no conclusion is possible unless one premise be, either negatively or affirmatively, universal. Assuredly there is no etymological connexion between the two words. . . . Let it mean 'related to more than one class,' and the power of the prefix *dis*, at least, becomes intelligible. For all the purposes of logic this is not enough; inasmuch as the particular character of the relation (all-important in the structure of the syllogism) is not, at present, given. It is enough, however, to give import to the syllable *dis*, in

affirmative propositions this relation is connective on both sides. Lo, the middle term forms part of both the others. In negative propositions this relation is connective on one side, disjunctive on the other. In—

All men are mortal,

All heroes are men,

the middle term men forms a part of the class called mortal, by being connected with it in the way that certain contents are connected with the case that contains them; whilst it also stands in connexion with the class of heroes in the way that cases are connected with their contents. In—

No man is perfect,

Heroes are men,

the same double relation occurs. The class man, however, though part of the class hero, is no part of the class perfect, but, on the contrary, expressly excluded from it. Now this expression of exclusion constitutes a relation—disjunctive indeed, but still a relation; and this is all that is wanted to eleven import to the prefix *dis-* in *distracted*. Wherever there is *distractedness* there is inference, no matter whether the *distracted* term be universal or not. If the ordinary rules for the structure of the syllogism tell us the contrary to this, they only tell the truth, so far as certain assumptions on which they rest are legitimate. These limit us to the use of three terms expressive of quantity. All, Some, and Some; and it is quite true that, with this limitation, universality and distributivity coincide. Say that

Some Y is X,

Some Z is Y,

and the question will arise whether the Y that is X is also the Y that is Z. That Some Y belongs to both classes is clear; whether, however, it be the same Y is doubtful. Yet unless it be so, no conclusion can be drawn. And it may easily be different. Hence, as long as we use the word *Some*, we have no assurance that there is any *distributivity* of the middle term. Instead, however, of *Some* write *All*, and it is obvious that some Y must be both X and Z; and when such is the case—

Some X must be Z, and

Some Z must be X.

Universality, then, of the middle term in one premiss is, by no means, the direct condition that gives us an inference, but only a secondary one. The direct condition is the *distributivity*. Of this, the universality of the middle term is only a sign, and it is the only sign we have, because All and Some are the only words we have to choose from. If others were allowed, the appearance which the two words (*distracted* and *universal*) have of being synonymous would disappear. And so they do when we abandon the limitations imposed upon us by the words All and Some. . . . In each of these formulae there is *distributivity* without universality, i.e. there is *distributivity* with a quality other than that of universality as its criterion. —Dr. R. G. Latham, *Transactions of the Philological Society*, December 18, 1857.

[Here, with a few unimportant exceptions, ends the long list of the words compounded with *Dis-*. Like *co-* and *con-*, this prefix is of Latin, rather than of English, origin; and, like *co-* and *con-*, it is only used correctly when the word which it precedes is Latin also. The rule thus suggested is, however, often violated, a hybrid compound being the result.

The notion conveyed by *Dis-* is that of *separation, difference, dispersion*, and, more remotely connected with the original idea, *change*. Hence it sometimes does a little more than convert a word into its opposite, as in *Displeasure* contrasted with

# DISW

Pleasure. The other words which take a similar place in composition, with which it most closely coincides, are *mis-* and *trans-*, though when each keeps its power, the difference is sufficiently clear; compare *Displace* and *Dispose* with *Misplace* and *Transpose*. In many cases, however, it is used improperly, either as an equivalent to one of these elements, or to express a difference too slight to have become generally recognized, in which case the word fails to take root in our language. In others it is superfluous; the meaning (as in *Disspread*, *Dissonder*) being sufficiently conveyed by the simple term. Hence, as may be seen in the preceding entries, many of its compounds are either *rare* or *obsolete*.]

In this, as in many other points in Political Economy, men are prone to confound cause and effect. **Diverse**. *v. n.* *Divert*; turn off or aside. *Rare*.  
The red-cross knight *divers'd*; but forth rode Britomart. Spenser, *Fairy Queen*, iii. 3, 61.

**Diversely**. *adv.* [That *diversely* is the true derivative from *diverse* is clear. Less clear, however, is the double question: (1) as to what *Diverse* is in the way of accent (i.e. whether *diverse* or *diver'se*), and (2) as to the word *Divers*, an adjective with an adverb (*diversly*) to match.

1) In Richardson the accentuation is *diverse*. He also gives *cōverse*. That this last is the commoner pronunciation is beyond doubt; and so is the fact of *converse* and *diverse* being words of similar form and origin: so much so, that, at the first view, the analogy of one ought to regulate the sound of the other. But *cōverse*, unlike the word under notice, has a verb in frequent use (*converse*), from which it has to be distinguished; *Diverse* (verb) being rare. Still, as it is somewhat more than a merely possible form, and as the current rule is in favour of the noun taking its accent on the first syllable, the analogy of *cōverse* is a just one—as far, at least, as it goes. Opposed to it, however, is that of *reversé*, where noun and verb are not only accented alike, but accented on the last syllable. The editor would keep these accentuations; adding that where they appear the *s* should be sounded as the *-ee* in *pence*, and not as the *s* in *penis* (which, to the ear, is *z*).

2) This distinguishes the words under notice from *Divers* (sounded *diverz*), which, with some of the older writers at least, is, apparently, the root of the adverb *Diversly*. In the 'sundry times and *divers* places' of the Prayerbook, it is submitted, not only that the reading is always this, but that a change to *divers* would impair the beauty of the sentence to which it belongs. Whether the pronunciation has grown out of the spelling, or the spelling represents the original pronunciation, is another question. The editor thinks that the form is catchphrase. Where there is a final *-a* there is generally the sign of a plural number; and in most cases this *s* is sounded as *z*; and that *divers* is limited to the plural is clear. We may say a *different* way, and a *diverse* way, but not a *divers* way. The difference between *diversely* derived from *diverse* sounded *diverse*, but with the *e* omitted (*diversly*), and *diversly* direct from *divers*, is, in many cases, difficult to determine; nor is it important. Pope's *diversly* is as likely to be the derivative of *diverse* (that being his spelling and pronunciation) as the *diversly* (from *divers*) of the older writers. In the present work the two forms are entered separately.]

ment did not see that it assumed the very point in  
dispute, the impossibility of arriving at a minimum  
of thickness; for if there is a minimum, its upper  
and under surface will arise be one; it will be  
itself a surface, and no . . . The argument

Speak to me. *Shakespeare, Hamlet*, i. 1.

4. Thus far the power of *do*, as an active or transitive verb, is clear. In the following instances it takes the character of an intransitive or neuter one. Preceded by *have*, and followed by *with*, it means *finish*; in which case the noun is governed, not by the verb, but by the preposition; the verb being left without a case. In an ordinary word this would make it neuter at once; yet there is a notable difference between 'I have dealt with such a person,' and 'I have done with such a person.' In the former, *deal* means 'have acted as a dealer,' which is a very vague term. In the latter, *do* is by no means equivalent to 'be a doer.' This is because *do* is a word which conveys not only the special notion of *action*, but of some object acted on; so that 'I have done with them' means 'done what I had to do.'

At any rate, it makes the doctrine that *done* is an active verb with its case understood a probable one. The word, then, if treated as one having a neuter character, is equivalent. Again, the notion of *end, finish, or conclude*, is conveyed by the form of the construction (that of the past participle) rather than by the meaning of the verb *do* itself, which has simply its first sense.

To speak of an action as past, with the implication that it will not be reverted to (and this is always conveyed by the construction), is to pronounce it finished.

No men would make use of disuniting parties to destroy one body, unless they were sure to master them when they had done with them.—*Bishop Stillingfleet*.

I have done with Chaucer, when I have answered some objections.—*Dryden*.

Having done with such amusements, we give up what we cannot disown. *Pope*.

5. In the following, the departure from a strict active sense, and the approach to a neuter, is clearer.

No man who hath to do with the king, will think himself safe, unless you be his good angel, and guide him. *Id.*

6. The doubts involved in the next construction require a reference to *Do*, from *drog*; the sense being *fare*, be in regard to sickness or health.

Good woman, how dost thou?—The better that it pleases your good worship to ask.—*Shakespeare, Merry Wives of Windsor*, i. 4.

The editor remarks that in entering these

last three senses as active, he merely follows Johnson and Todd.

### 7. Construction of *do* with another verb.

Johnson writes:  
 'To *do* is used for any verb to save the repetition of the word; as, "I shall come, but if I *do* not, go away;" that is, if I come not.'

Then quoting—

Thus painters Capids paint, thus poets *do*,  
 A naked god, blind, young, with arrows two.

*Sir P. Sidney.*  
 If any thing in the world deserve our serious study and consideration, those principles of religion *do*.—*Archbishop Tillotson.*

Take all things which relax the reins; for what *do*es so, prevents too vigorous a motion through the arteries.—*Arbutnot.*

Here *do* comports itself as a verb much as *thing* and *one* comport themselves as substantives and pronouns; *thing* being a name for almost any object which the class of substantives includes, and *one* serving for almost any object which comes under the class of pronouns. In like manner *do* is a term denoting an action, verb being the name of the class to which such terms belong. Such being the case, it can stand in the verb's place.

8. By this the construction of *do* followed by another verb, such as *I do* or *did love*, was probably suggested; though the details both of its history and logical import are obscure. That the verb is in the infinitive mood is evident from the instances presented by those languages wherein the infinitive has an inflexion, as *thalen winken* *did wink* in German. That the construction, then, is, in the main, the same as that of *shall*, *will*, *may*, *must*, and *let*, is certain; the difference, however, is important. *Do*, instead of meaning something as different from the verb which follows it as *shall*, *will*, &c., are from *call*, *speak*, and the other verbs with which they may be connected, means the same; i.e. it represents the verb much as it did in the extracts under 7. It is often, however, emphatic. Johnson calls it a verb of 'vehement command or earnest request,' as, 'Help me, *do*;' 'Make haste, *do*.' Adding—

If thou hast lost thy land, *do* not also lose thy constancy; and if thou must die a little sooner, yet *do* not die immediately.—*Jeremy Taylor, Rule and Exercises of Holy Living.*

Loose me. —I will free thee.—  
*Do*, and I'll be thy slave. —*Drayden, King Arthur.*

From 'Help me, *do*,' to 'Do help me,' as long as there is the conveyance of an emphasis, the transition is not violent; and the use of *do* so often coincides with an emphasis of some kind that the construction has been called the emphatic, and that, in many cases, with good reason. It generally shows itself to be this by conveying a statement which answers an implied doubt.

'I did love him, but scorn him now.'  
 'I *do* not know the man.'

As if it had been either said or suggested that 'the man was *not* loved at one time,' or that 'he *was* known.'

9. Still, it is admitted that this is not always the case.

The Turks *do* acknowledge God the Father, creator of heaven and earth, being the first person in the Trinity, though they deny the rest.—*Johnson, Advertisement touching a Holy War.*

The extract being preceded with the specific statement that here it is expletive; though it would not be so if the Turkish acknowledgement of a God had been denied. In considering this, we must take our examples from prose only. In verse

the additional syllable may be inserted for the sake of the metre.

10. In interrogations, whatever may have been the origin of the construction, the emphatic element is generally at its minimum. We rarely say 'Know you him?' almost always, 'Do you know him?'

11. The same applies (even more generally) to negatives. It is in very few cases (such as *I dare not*, *I cannot*, and words of a peculiar kind) that we make a negation without using the circumlocution with *do*, rather than the simple verb: 'I *do* not know' being infinitely commoner than 'I know not.'

And this leads us to an apparent anomaly. The combinations just given (*dare not*, *know not*) are examples of a rule which in English is absolute and without exception, viz. that the negative particle *not* always follows, and never precedes, its verb; *I not know* being an impossible form. Insert, however, *do* (*I do not know*), and the case is altered. This is because *do* is the verb upon which the negation turns.

The nature of the past form *did*.—Of the two *ds* in this word, one belongs to the root, and is the *d* in *do*, the other is the sign of a tense. Which is which? Contrary to the general rule and, until lately, the general explanation, it is the *first d* which gives the tense, the *second* which represents the original verb; a view originally suggested by the participle *done*, and confirmed by a reference to the conjugation in the Mesogothic; which shows that such preterites as are formed by changing the vowel (*swim*, *swam*; *speak*, *spoke*) originated in a reduplication, like *verru, veredi*, &c., in Greek and Latin; and, so doing, coincided with the Perfect of the classical languages rather than with the Aorist. Except, however, in the Mesogothic, where there are numerous words in which it is preserved (*sai-salt*, *lai-lo*, from *salta*, *lain*), the reduplication has been lost; *did* being one of the few words in which it has survived. See also Hight = called.

*Done up.* Ruined.

The young Duke had also announced to his relatives, and to some of his particular friends, that he intended to travel for some time, and he well knew that their charitable experience would understand the rest. They understood everything. The Marquess' party daily increased, and 'The Universe' and the 'New World' announced, that the young Duke was 'done up.'—*Barclay the younger, The young Duke.*

*Do. r. n.* [from A.S. *dugan*.—see second extract.] Succeed; fulfill a purpose.

You would do well to prefer a bill against all kings and parliaments since the conquest; and, if that won't *do*, challenge the crown.—*Collier, Essay on Duelling.*

[In the phrase This will *do*.—This will answer the purpose, the word *do* is a wholly different from the word *do*=act. In the first case it is equivalent to the Latin *valere*, in the second to the Latin *facere*. Of the first, the Anglo-Saxon inflexion is *deah, dagaþ, dohþe, dohþet*, &c. Of the second it is *do, doh, doþe, &c.* In the present Danish they write *dagaþ*, but say *dagaþ*; as *dagaþ* *det* *meget* is it worth anything pronounced *dagaþ* *det* *meget*! This accounts for the ejection of the *g*. The Anglo-Saxon form *deah* does the same. In Robert of Bourne the preterite is *deah*. . . . We cannot, however (although we ought), say that *do*ed well enough, though a Frenchman says *le dagaþe* *me*.—*Sir. R. G. Latham, English Language, Spelling, &c.* ch. xxx.

Thus far there is no ambiguity. The connection, however, of the notions conveyed by *suit*, *be adequate to*, *thrive*, *fare*, *comport one's self*, and *act*, creates difficulties. In

Come, 'tis no matter; we shall do without him.  
*Adrian.*  
*do* may be rendered by *act*, *succeed*, or *get on*. The same applies to *do*, used when

## DOCI

{DO  
DOCI}

speaking of a person's health; upon which Wedgwood has the following observation.

It is often said that *do* in the inquiry after a person's health is properly the Dutch word, *Dutch doegen, doegen*, German *fragen*, to be able as good for, to avail, to thrive; but this is a mistake. To *do* is to act, or often to serve as the medium of active exertion. We ask how a thing does, meaning, how does it perform the office expected of it, and the word is used in a very similar sense in the inquiry, How do you *do*? How do you get on? How do you perform the office of life? It is a simple translation of the Old French, *Comment se fait-il vous?*

'Thus it is dit par grand danger,  
 Sire, comment se fait-il vous?  
 Dame, la n, dit le Secretains.'

(Fabliaux et Contes, t. 215.)  
 'David demanded of him how Job *did*, and how the people *did*, and how the war prospered.' In the *Livre des Rois*: E David enquist come Job *did*, et il peuples, comment il se faisoient del siege.—and how they got on with the siege.—*Wedgwood, Dictionary of English Etymology.*

That the foregoing doctrine applies to many cases is beyond doubt. Whether it applies to all is another question. In the very common phrase, 'How do you *do*?' it certainly cases the construction to suppose it to mean 'How do you *fare*?' As it is, the editor has noticed the word under both entries.

In the following extract the construction is obscure; inasmuch as it is doubtful whether the word in *-ing* (*asserting*) is to be taken as a participle with a gerundial construction, or as a substantive, i.e. a verbal abstract.

We have not yet *done with* asserting to propositions at first hearing, and understanding their terms.—*Locke.*

The omission of *with* introduces another modification.

You may rumble a whole day, and every moment discover something new; but when you have *done*, you will have but a confused notion of the place.—*Spectator.*

Here the full construction would be '*done* rumbling'; the ambiguity being, as in the foregoing instance, with regard to the import of *-ing*. Here, however, as in all the previous ones, *finished* may be written instead of *done*.

B. they are docketed, and entered on the docket of that term: so that upon any occasion you may soon find out a judgement by searching these dockets, if you know the attorney's name. It appears by the Report of the Committee, 26 Feb. 1800, that the docket rolls or docket of records at Westminster, commence as follows: Those of the chief protonotary about the time of Edward VI., those of the second protonotary about the 1st of Henry VIII., and those of the third protonotary in the 2nd of Elizabeth. Evidence*.

dance she has led me: she *dodged* with me above  
thirty years.—*Addison*.

The chaffering with dissenters, and *dodging*  
about this or t'other ceremony, is but like open-  
ing a few wickets, and leaving them a-jar, by  
which no more than one can get in at a time.  
—*Steele*.

It was an excellent though a harmless *dodge*, sir.

**Dodo. s.** [corruption of *Doulers*, and Dutch  
rather than Portuguese, as may be seen in  
the last extract. As the island, on its disco-  
very, was uninhabited, the notion of its  
being a native term is out of the ques-  
tion.] Bird of remarkable configuration,  
extinct within the last century, a native  
of the Mauritius, and, according to  
the latest views as to its affinities, as given  
in an elaborate monograph by Strickland,  
more akin to the Columbidae, dove or  
pigeon family, than to any other.

The *dodo* is a bird the Dutch call Walghvogel or  
Dad Eersen; her body is round and fat, which oc-  
casionally her slow pace; or that, her corpulence.  
*Sir T. Herbert, Relation of some Years' Travels  
into Africa and the Great Asia*, p. 322.

The Dutch sailors called them Walghvogel. . . In  
1602, Willem sailed from Batavia. . . He makes re-  
peated mention of *dod-mans*. . . It is not easy to  
determine the date when the synonymous words  
*Dodman*, from which our name *Dodo* is derived, and  
Dodo, first entered the language. . . The earliest use . . .  
may be from 1611. Verhaell's voyage was pub-  
lished here, however, it occurs under the corrupt  
form of *Doddersten*. There is little doubt that the name  
is derived from *dodder*, which, in the Dutch lan-  
guage, means slurred. . . *Dodder* not improbably a  
cant word among Dutch sailors analogous to our  
lubber. . . Sir Thomas Herbert was the first to use  
. . . *Dodo*. He tells us that *dodo* is a Portuguese word,  
and, in fact, we find that *dodo*, in the last named  
language, means foolish or simple. . . But none of the  
Portuguese voyagers seem to have mentioned the  
*Dodo*, or even visited Mauritius. . . The derivation  
of the word *Dodo* is even still more obscure.—  
*Strickland, The Dodo and its Kindred*.

**Doe. s.** Female of a buck.

That tort'rst both the *dóer* and the *dóer*. *Daniel*.

schief; yet it is but a private act, and the *dóer* of  
it may chance to pay his head for his presumption.  
—*South, Sermons*.

done, let not the principal *doers* themselves be for-

Polity*.

Beware of *dogs*, beware of evil workers.—*Philips  
pneum.* II. 2.

[*Dolly*.] Probably only a modification of the Dutch *dolce*, a towel, although commonly said to be derived from the name of a dealer by whom they were introduced.

The stores are very low, sir, some *dolly* petticoats and mantuaes we have, and half a dozen pairs of broad shoes. (Dryden, *Kind Keeper*).

The use of *dolly*, in the sense of a small napkin at dessert, was probably imported with the name from Holland. Dutch, *dolce*, *dolce*, napkin. German, *serviet*, a towel; Swiss, *dachet*, a napkin.—*Wedgwood, Dictionary of English Etymology*.

When they will not give a *dolt* to relieve a lame beggar, they will lay out ten to see a dead Indian.—*Shakespeare, Twelfth Night, ii. 2.*

In Anna's was a soldier, poor and old,  
Had dearly earn'd a little purse of gold;  
Tir'd with a tedious march, one luckless night,  
He slept, poor dog! and lost it to a *dolt*.  
—*Pope*.  
'And so, I suppose, this Miss Wyndham, his daughter, will have nothing at all?' 'Not a *dolt*,' said he, starting and setting himself with his own feet, and the four legs of his chair, on the floor again.—*Emilia Wyndham, ch. xvii.*

Taken to wife.

They might hope to change  
Torment with ease, and a sweet recompense  
Dole, with delight. *Milton, Paradise Lost, iv. 892.*

**Dole**, *s.* [N.Fr.] Boundary: (this sense is yet used in some parts of England; a *dole-stour* in Norfolk is a landmark).

Cursed be he which translateth the bounds and *dols* of his neighbour.—*Injunctions of Queen Elizabeth, 1539, B. iii. 1539.*

Accursed be he, saith Almighty God by Moses, who removeth his neighbour's *dols* and marks.—*Deuteronomy, ii. 16. Ecclesiastical for Rogation Week*.

[*Dole*, *dole*, slips of pasture left between furrows of ploughed lands. (Killey).] 'Cursed be he that translateth the bounds and *dols* of his neighbour.' (Injunction to Elizabeth in Brandy's Popular Antiquities.) A *dole-meadow* is a meadow in which the shares of different proprietors are marked by *dols* or landmarks. Now the simplest division of property would be a strip of turf left unploughed. (Hilf Deutsch, *dole*, a small ditch with the sod turned up beside it for a landmark; *antidole*, *s.* to mark the division of properties with a ridge and furrow. (Bremsches Wörterbuch.) The word is probably at bottom identical with Welsh *twl*, a pit, *twl-ann-dol*, a pit, ditch; then use the ditch and bank are made by flinging on the one side the earth taken up from the other) applied both to ridge and furrow, and subsequently appropriated to either as accidental circumstances might determine. We find the same duplicity of meaning in *dole*; and *mole*, the term by which we designate the ditch of a castle, signifies in Italian the mound on which the castle is built.—*Wedgwood, Dictionary of English Etymology*.

**Dole**, *v. a.* Distribute as a *dole*; deal out.

He *dols* out his morality in periodic apothegms.  
—*Lamb, Letter to Coleridge*.

If the exceeding glory of heaven cannot counter-  
vail the *dolesomeness* of the grave, what dost I be-  
lieving?—*Bishop Hall, Meditations, Of Death. (Ord 188.)*

**Doligote**, *s.* This is entered in the Law  
Dictionaries, Tomline and Jacob, with little

more than the notice that it is the A.S. *doly* = wound, maim, scar, or similar bodily injury, and *hote* = penalty, fine, recompense for injury; the term being apparently Anglo-Saxon rather than English; or, at least, obsolete or rare in modern law. Dog-bolt is, probably, a corruption of this, and, at the same time, a proof showing how early the true meaning of the word was lost. If this derivation be true, a 'dog-bolt' lawyer was an action-seeking pettifogger, who first provoked an assault and then sued for damages.

**Dolichocephalic.** *adj.* [Gr. *δολύκεφαλος* = long, *κεφαλή* = head; as a new term it might conveniently be spelt with a *k*, -*cephalic*.] Long-headed; (term used in *Ethnology* to denote a head of the African type, i.e. one with its diameter from side to side notably shorter than its diameter from front to back; the opposite to *brachycephalic*.)

To him Huetzel we owe the terms brachycephalic and dolichocephalic. — *Huetzel, On a Systematic Mode of Craniometry.*

**Dolichocephalism.** *s.* Condition, or form, indicated by Dolichocephalic.

(For example see next entry.)

**Dolichocephalous.** *adj.* Same as Dolichocephalic.

In the sciences of observation, 'it is the averages which afford the best evidence; they alone have an absolute value, and lead to positive results.' Now we find that the twenty-five skulls from long barrows have an average relative breadth of 71, which, according to the view here adopted, is all but absolutely dolichocephalous; whilst the twenty-five skulls from the round barrows have an average relative breadth of 81, which even exceeds the brachycephalous standard. The two classes differ nearly as much in their relative breadth as do a series of the skulls of Hindoo or negroes from those of Europeans or Americans. Surely, if *dolichocephalous* and *brachycephalous* have ever as characters, a race, then, they have it in this instance. By mixing the skulls of the one category with those of the other, it is possible to modify the averages to almost any extent, in proportion to the amount of admixture, and in this way to mask and confuse the actual results. Thus, if the two classes of skulls be in equal numbers, as in the table before us, the relative breadth would be 76, or almost exactly that of the oval or orthocephalic type; and so the *dolichocephalism* of the one, and the *brachycephalism* of the other, would be equally lost sight of in such a method of analysis. — *Dr. Thurnham, On British and Danish Skulls, Memoirs, etc., Anthropological Society of London, p. 177: 1863.*

**Dollite.** *s.* Term of contempt for one who professes much and performs little. Great talkers are commonly *dollites*. — *Rich Richardson, Choice Observations upon the Old Testament, p. 28: 1635.*

Ten thousand *dollars* for our general use.

**Dollmaker.** *s.* Maker of dolls.

(For example see extract under Doll.)

**Dolmen.** *s.* In *Archæology*. Breton name for a chambered variety of cromlech.

This occipital flatness was characteristic of the skulls of ancient Gauls. It exists in many contained in the Galerie Anthropologique, at the Jardin des Plantes, and is quite obvious in some of those derived from the excavation of the *dolmens* at Meudon, near Paris. . . . It ought not to be omitted to be mentioned here, that the late learned and excellent Swedish craniologist, Professor A. A. Retzius, designated this and the other brachycephalic skulls derived from the Meudon *dolmens*, *Basques*, *Arnaïs*, *Basak*, *Budolf*, *Kreyser*, *Nilsen*, and others had agreed in an erudite manner, that all Western European in the oldest period was inhabited by a so-called Tursanian race, who had brachycephalic skulls, of which the Finns and the Basques are the only representatives. On the discovery of many crania of this form among the osseous relics of the *dolmens*, at Meudon, [he] remarked this . . . to be fully proved, and he subsequently treated it as an established fact and boldly asserted that these were the skulls

of Basques, i.e. of the principal race now supposed to be represented by the Basques. — *B. Davis, On the Crania of the Ancient Britons, Natural History Review, no. 7, p. 283.*

**Dolomite.** *s.* In *Geology*. Magnesian limestone.

The great geological feature of the island is, however, the profusion of caves, and the various new formations arising from its disintegration. In the mountains, with the exception of occasional beds of *dolomite*, no more recent formations overlie it; from the period of its first upheaval, the gneiss has undergone no second submergence, and the soil which covers it in these lofty altitudes is formed almost entirely by its decay. Rubies, both crystalline and amorphous, are also found in a particular stratum of *dolomite*; of Ballastate and Madula, in which there is a peculiar copper-coloured mica with metallic lustre. — *Sir J. K. Tennant, Ceylon, pt. i. ch. l.*

**Doloriferous.** *adj.* Producing pain. Whether or not wine may be regarded in such *doloriferous* effects in the joints. — *Whitaker, Blood of the Grapes, p. 74.*

**Dolorific.** *adj.* Causing grief or pain.

This, by the softness and rarity of the fluid, is insensible, and not *dolorific*. — *Arbutnot, On the Effects of Air on human Bodies.*

**Dolorous.** *adj.* 1. Sorrowful; doleful; dismal; gloomy; unpressing sorrow.

We are taught by his example, that the presence of *dolorous* and dreadful objects, even in minds most perfect, may, as clouds, overcast all reasonable joy. — *Hooker, Ecclesiastical Polity.*

2. Painful. How doth thine own weight torment thee, whilst thy whole body rests upon this forced and *dolorous* hold, till thy matted feet bear their part in a no less afflictive supportation! — *Bishop Hall, Contemplations, The Crucifixion.*

3. Pain; pang. A mind sad and bent upon somewhat that is good, doth avert the *dolours* of death. — *Bacon.*

**Dolphin.** *s.* Cetaceous animal so called.

Though the old genus *Delphinus* has now been broken down into no less than nine subdivisions, and there are many species in them, yet in the genus of *dolphin* proper the number of species amount to nearly twenty. . . . The general features which distinguish the [common] dolphin are few and simple. Their snout is considerably elongated, broad at the base, round at the extremity. . . . It used to be held that the common *dolphin* was an inhabitant of every sea throughout the world. . . . A very different opinion is now gaining ground. . . . the *dolphin* with 'its many dying colours,' mentioned in many books and sung by modern poets, is not this, but quite a different animal, . . . the beautifully coloured *Coryphæna Hippurys*, the Dorado of the Portuguese; and it would be well if its popular name were altogether dropped. — *Hamilton, Whales, in Naturalist's Library.*

**Dolt.** *s.* Heavy stupid fellow; blockhead; thickskull; loggerhead.

Let *dolt* in haste come after his erect To those high powers which idly sit above. — *Sir P. Sidney.*

Thou hast not half that power to do me harm, As I have to be hurt: oh, dull; oh, *dolt*! As ignorant as dirt! — *Shakspeare, Othello, v. 2.*

Damneth, the most arrant *doltish* clown, that ever was without the privilege of a hauberk. — *Sir P. Sidney.*

If I have since felt lassitude and weariness at the common-place suppositions of these white-waist-coated wise-acres, relieved only by a sort of indignation at the *doltish* stupidity of their fancies and calculations, I doubt very much whether I was ever so much worried in after-life by their elaborated nonsense as I was by Tom Hickson's conversation on the day to which I now refer. — *Theodore Hook, Gilbert Gurney, vol. ii. ch. l.*

**Doltishness.** *s.* Attribute suggested by Doltish; folly; stupidity.

We have nothing but scurrility, unworthy of any cluste ear; or some extreme show of *doltishness*, indeed, fit to lift up a loud laughter, and nothing else. — *Sir P. Sidney, Defence of Poetry.*

**Dome.** *s.* [see last extract.]

1. Building; house; fabric.

Best be he call'd among stout men, Who to his God this column rais'd: Though lightning strike the *dome* again, The man who built it shall be prais'd. — *Prior.*

2. Hemispherical arch; cupola.

And urns, and *domes*, and cells, and grottoes. — *Shakspeare.*

[It is doubtful how the term *dome* came to be applied to a cupola or vaulted roof. A cathedral is in Italian *duomo*, in German *dom*, and a *dome* may be so called because it was the ornament of a cathedral church. A church in general was called *domus Dei*, the house of God, and probably the name was given to a cathedral church par excellence. On the other hand we find that the Greek *doma* was used for a roof. 'Dome' in Oriental languages signifies ipsum dictum quod apud Latinos testium, in Ebraica enim est, Egypto non habent in testis cubitum sed *domus*, que domus vel Solaria, vel Alceia vocant, atque, plana tecta quo transiens trahitur sustentantur'. (M. Jerome in Hieronymo). — *Wadsworth, Dictionary of English Etymology.*]

**Domesbook.** *s.* See Domesday.

**Domesday.** *s.* Element in the triple compound Domesday-book; a *proper*, rather than a *common*, term, but one requiring notice. One of its derivations is *domus Dei*, from being kept in an enclosure so called, i.e. *God's house*; and, if this be true, the present spelling is preferable, even on etymological grounds, to *Domesday*. But this origin is unsatisfactory; it being nearly certain that the *dome* is the ordinary *doom* = judgement. If so, the present spelling rests upon the word being a *proper*, rather than a *common*, term—*Domesday* being the original spelling. The meaning of *-day* is more doubtful. A *domesday* roll was probably a title-deed shown on certain court-days.

*Domesbook*, liber iudicialis, [was] a book composed under the direction of Alfred, for the general use of the whole kingdom, containing the local customs of the several provinces of the kingdom. This book is said to have been extant as late as the reign of Edward IV., but in now lost. . . . *Domesday* or *Domesday-book* [is] a most ancient record, made in the time of William I., and now remaining in the Ex-

chequer, consisting of two volumes, a greater and a less. . . There is also a third book, which differs from the others more in form than in matter. . . And there is a fourth book, kept in the Exchequer, which is called *Domestick*, and, though a very large volume, is only an abridgement of the others. Likewise a fifth book is kept in the Remembran office in the Exchequer, which has the name of *Domestick*, and which is the very same with the fourth before mentioned. Our ancestors had many *domesticks*. . . The addition of *-day* to this book was made with any reference to the final day of judgment. . . There is an ancient roll in Chester Castle called *Domestick* roll. At York, Worcester, and other cathedrals, these registers or cartularies are called *Domestick* books.—*Toutin, Law This January*. (Granger.)

We learn from the Saxon Chronicle, that in the 10th year of king William's reign, an invasion was apprehended from Denmark. . . As soon as the danger was over, the king held a great council to enquire into the state of the nation; the immediate consequence of which was the compiling of the great survey called *Domestick* Book; which was finished the next year; and in the latter end of that very year the king was attended by all his nobility at Sarum, where all the principal landholders submitted their lands to the yoke of military tenure, became the king's vassals, and did homage and fealty to his person.—*Sir W. Blackstone, Commentaries*.

Such they were, who might presume to have done much for the king and honour of the state; Having the chiefest notions undergone, Both foreign and *domestic* of late. *Daniel*. *Domestic* evils, for that we think we can master them at all times, are often permitted to run on forward, till it be too late to reveal them.—*Hooker, Ecclesiastical Polity*, dedication.

The necessities of man had at the first no other helps and supplies than *domestic*; such as that which the prophet implyeth, saying, Can a mother forget her child?—*Id.*

In this their *domestic* celebration of the Passover, they divided supper into two courses.—*Id.*

**Domestically. adv.** In a domestic manner; relatively to the domestic character or affairs; privately; not openly.

Is it not a miracle, that so many of your private Ignorants, and monks feeding here in England daintily, arrayed gallantly, lodging softly, should be very *domestically* and privily conversant with ladies, dames, matrons, maids of all sorts, and yet none of all these be searched?—*Sheldon, Miracles of Antichrist*, p. 134: 1610.

He was glad . . . to return to Sheene, where he lived *domestically* as usual, till the death of Sir W. Temple.—*Lord Orrery, On Swift*, let. 2.

**Domestickity. s.** Domestic character.

A judge may be recessed on the score of greatly and an intimate acquaintance or friendship with the adverse party; for a moderate familiarity and acquaintance is not sufficient hereunto; and great familiarity is included under the notion of friendship and *domestickity*, as living together in the same house, and the like.—*Ayliffe, Parergon Juris Criminalis*, (Orel MS.)

It is the *domestickity* of esprit which makes it so palatable.—*Saturday Review*, 8 pt. 3, 1841.

**Domicial. adj.** Having the character of a dome. *Rare*.

At Fontenay, near Caen, a remarkable chambered tumulus was excavated in 1829, which corresponds

It contained ten *domicial* chambers, arranged in pairs opposite to each other, and formed of horizontal dry-wallings. They had a diameter and height of from ten to fifteen feet. *Dr. Trenchard, On the two principal Forms of ancient British and Gaulish Monks, Memoirs*, &c. Anthropological Society, vol. i.

**Domicile. s.** House; place where a person has his home.

This famous *domicile* was brought with these apparitions in one night from Nazareth over seas and lands by mighty angels; and can, if honoured with a visit, with an offering, or with a vow, cure in a moment all diseases. *Brevel, Saint and Samuel at Kadur*, p. 368.

The choice of the situation for this *domicile*, the art of making it convenient, of hiding its entrance, and securing it against more powerful animals, are all so many marks of superior skill and industry.—*Goldsmith, Animated Nature*, il. 313. (Orel MS.)

*Domicile* (is) the place where a man has his home. Personal property follows the person of the owner, and, on his decease, must be distributed according to the law of the country in which he was domiciled at the time of his death, and not according to the law of the country where such property is situated. The residence of a party for forty days constitutes a *domicile* as to jurisdiction in Scotland. *Toutin, Law Dictionary*. (Granger.)

**Domicile. v. a.** Connect anyone with a country by residence.

After they have lain a little while, they grow as drowsy as dormice, unless they are roused.—*Collier, Essay on Thought*.

[*Dormouse*.—The termination *mouse* is probably an instance of false etymology, the real origin being a French *dormice*, which cannot it is true be cited from the dictionaries, but is rendered probable by the name by which the animal is known in *Langue d'oïl*, *radormiceira*. In the same dialect *dormiceira*, a slumberer, sleepy head, equivalent to *dormouse* (*mouse*, a mouse, is feminine) in ordinary French. The dormouse is called a *slipper* in Suffolk.—*Wedgwood, Dictionary of English Etymology*.]

**Dorn. s.** [German = thorn.] Thornbuck.

The coat is stored both with shellfish, newellies and shellfish, and fat, as turkeys, dorns, and holly-but.—*Carew*.

**Dornick. s.** Cloth from Dornick (Tournay): (the extract from Ure suggests another origin; all, however, that it gives as a fact is that the manufacture was Scotch).

Three yards of Dornick for a player's coat, 5 Henry VIII.—*Lyness, Customs of London*, l. 230.

I have got them painted with your arms, With a fair dornick carpet of my own Laid down for the more state.

*Beaumont and Fletcher, Two Noble Kinsmen*.

**Dornick** is a species of flannel linen of stout fabric which derives its name from a town in Scotland where it was first manufactured for tablecloths. It is the most simple in pattern of all the varieties of the diaper or damask style, and therefore the goods are usually of a coarse quality for common household wear. . . . Figure 1128 is a representation of the most simple species of tablecloth, which is merely an imitation of chequerwork; and is known in Scotland, where the manufacture is practised, by the name of Dornick.—*Ure, Dictionary of Arts, Manufactures, and Mines, Dornick and Textile Fabrics*.

**Dorp. s.** [Dutch or German, rather than English; the English form being Thorp.] Small village.

Amsterdam . . . being from a mean fishing-dorp come, in a short revolution of time, by a monstrous increase of commerce and navigation, to be one of the greatest marts in Europe.—*Hornell, Familiar Letters* (dat. 1619), l. 1, 7.

What should they do, beset with dangers round, No neighbouring dorp, no lodging to be found, But blacky plains, and bare unwholesome ground?—*Dryden, Hind and Panther*.

**Dorrer. s.** Drone.

There is a great number of gentlemen which cannot be content to live idle themselves, like dorrers, of that which others have laboured for.—*Robinson, Translation of Sir T. More's Utopia*, b. l. 1531.

**Dorse. s.** Canopy. Obsolete.

Imprimis, a dorse and redone of crymyn velvet, with flowers of gold, in length two yards three quarters.—*Will of Sir R. Sutton, Life by Churton*, p. 321.

**Dorsal.** *adj.* [Lat. *dorsalis*, from *dorsum* = '4. back.] Belonging to the back.

The first dorsal fin is black.—*Pennant*.  
When Blumenbach pointed out to Cuvier that the tadpoles of the Surinam toad (*Rana pipra*) have tails, this great anatomist was disposed at first to deem the specimen a monstrosity, because he could not comprehend for what purpose these strange beings, so curiously lodged in the dorsal cells of their mother, should have the swimming tail of the common tadpole.—*Lutwidge, Lectures*, lect. ii. (Ord 318.)

**Dossier.** *s.* [? Lat. *dorsum*; ? Fr. *dossier*.—see Dossier.] Pannier; basket or bag, or pair of such, hanging from the back of a beast of burthen, one on each side, for the reception of things of small bulk; packsaddle.

I may meet her  
Riding from market one day, 'twist her *dossers*.  
*Beaumont and Fletcher, Little Thief*.

**Dorsum.** *s.* [Lat. = back.] Ridge of a hill.  
I know not if it had any connection with a similar ridge, which creeping through the deep south-east valley beneath the trench of the great escarpment on the brow of Catharine hill near Winchester, suddenly rises into a massive *dorsum*.—*T. Warren, History of the Parish of Kiddington*, p. 68.

**Dorture.** *s.* [Fr. *dortoir*; Lat. *dormitura* = sleepingplace, from *dormio* = sleep.] Dormitory.

He led us to a gallery like a *dorture*, where he showed us along the one side seventeen cells, very neat.—*Bacon*.

To a friar that begs, or to a monk in his *dortor*.—*Jeremy Taylor, Dissuasive against Popery*, ch. ii. § 2.

**Dory.** *s.* [see last extract; the derivation from *juniore* being the true one.] Fish (Zeus Faber) so called.

Between the floating rib extends an aponeurosis, the remains or homologous of the primitive fibrous investment of the abdomen in the lancelet and lamprey. In the salmon and *dory* the ribs continue to be attached to some of the parapophyses after they are bent down to form the lateral canal and spine in the tail; and we derive the same striking evidence of the true nature of these inferior arches from the skeleton of the lunny, the *dory*, and some other fishes.—*Owen, Lectures on Comparative Anatomy*, lect. iii.

The *dory* or *doree* contends with the haddock for the honour of bearing the marks of St. Peter's fingers, each being supposed to have been the fish out of whose mouth the apostle took the tribute money; lying on its sides, in proof of its identity, the marks of his finger and thumb. Another origin for the spots on the side of the *dory* has also been assigned. St. Christopher, in wading through an arm of the sea, bearing our Saviour, whence his name Christopherus, is reported to have caught a *dory*, and to have left those impressions on his sides to be transmitted to all posterity as an eternal memorial of the fact. The name of *doree* was therefore said to have been derived from the French *dorée*, 'worshipped.' Our common appellation is also said to be of foreign origin, and even with a second reference to St. Peter. The fishermen of the Adriatic call this fish *il janiore*, 'the caterpillar,' in allusion to the supposed keys of the gates of heaven, of which the apostle is pictured to be the bearer; and in several countries of Europe the *dory* is called St. Peter's fish. The real origin of the English name for this fish may be questioned; but it is probably derived from the French *doree*, or *janeu doree*, in reference to its peculiar golden colour. At what time the epithet John became prefixed to the simple name of this fish, it might be difficult to ascertain; its name of *doree* is at least as old as Merrett, who in his *Pinnax Rerum Naturalium Britannicarum*, 1686, speaks of it as a *doree* or a *dory*.—*Yerrell, British Fishes*.

**Dose.** *s.* [Fr.; Gr. *dosis* = giving, or thing or quantity given.]

1. So much of any medicine as is taken at one time.

The too virgious *dose* too severely wrought,  
And added fury to the strength it brought.  
*Dryden, Virgils Eclog.*

In a vehement pain of the head he prescribed the juice of the thymus in warm water, without mentioning the *dose*.—*Arbuthnot*.

2. Anything nauseous.

If you can tell an ignoramus in power and place, that he has a wit and understanding above all the world, I dare undertake that as fulsome a *dose* as you give him, he shall readily take it down.—*South*.

3. As much of anything as falls to a man's lot. *Ludicrous*.

We pity or laugh at those fituous extravagants, while yet ourselves have a considerable *dose* of what makes them so.—*Grassille*.

2. Give physic or anything nauseous to any man. *Ludicrous*.

He may cast him upon a bold, self-opinioned physician, worse than his distemper; who shall *dose*, and bleed, and kill him 'secundum artem!'—*South, Sermons*, i. 298.

**Dosis.** *s.* Dose, of which it is an imperfectly Anglicized form.

**Dot.** *s.* Small point or spot.

Our English chemists have not generally adopted the notation of oxygen by *dot*; but have employed commas or full stops and symbols (., or .+), to denote various degrees of union, and numerical indices. Thus the double sulphate of copper and potash is Cu<sub>2</sub>SO<sub>4</sub> + KO<sub>2</sub>SO<sub>4</sub>.—*Wheatell, Novum Organum renovatum*.

**Dot.** *v. a.* Mark with specks; spot.

Many thousands of square miles which are now rich corn land and meadow, intersected by green hedgerows, and *dot*ted with villages and pleasant country seats, would appear as moors overgrown with furze, or fens abandoned to wild ducks.—*Macaulay, History of England*, ch. iii.

**Dotage.** *s.* Condition of one who dotes.

1. Loss of understanding; imbecility of mind; deliriousness.

The soul in all hath one intelligence;  
Though too much moisture in an infant's brain,  
And too much dross in an old man's sense,  
Cannot the prints of outward things retain:  
Then doth the soul want work, and idle sit,  
And this we childishness and *dotage* call.

*Sir J. Davies, Immortality of the Soul*.  
No less are they out of the way in philosophy, peering their heads with the sapless *dotages* of old Paris and Salamanca.—*Milton, Apology for Smeaton*.

I hold, that perfect joy makes all our parts  
As joyful as our hearts:  
Our senses tell us, if we please not them,  
Our love is but a *dotage*, or a dream.

*Sir J. Suckling*.  
No plea was to be admitted to release from imprisonment; not the duty of the husband to the young wife, of the young wife to her husband; not that of the parents for the care of their children, nor of children for the care of their parents; infirmity, age, *dotage*, nothing excused, nothing mitigated the sentence.—*Milman, History of Latin Christianity*, b. xi. ch. i.

2. Excessive fondness.

If on your head my fury does not turn,  
Thank that fond *dotage* which so much you scorn.

Or risk my patron's subjects, or my own.

*Garth, Translation from Ovid*.  
**Dotard.** *s.* One whose age has impaired his intellects; man in his second childhood.

Else never should thy judgement be so frail.

*Spenser, Faerie Queene*.  
I am come to insult thee for an old fantastick *dotard*, as thou art, in over defending the women.—*Tutler*, no. 366.

When the Christian religion then had taken foot in the empire, what sumptuous monuments were erected by that pious Constantine (in whom our nation claimed a just interest) let historians speak; no stones were too precious, no metal was too costly for that happy use; and so powerful influence had that example upon Christian kings and princes, that each strove who should exceed other in the cost and splendour of those holy fairicks, the riches of their *dotation*, the price of their sacred vessels.—*Bishop Hall, Remains*, p. 223.

**Dote.** *v. n.* [?] ]

1. Have the intellect impaired by age or passion; be delirious.

2. One fondly, weakly, and excessively in love.

**Dotard. s.** Standing tree in a state of decay.  
For great trees, we see almost all overgrown trees  
in church-yards, or near ancient buildings, and the  
like, are pollards and dotards, and not trees at their  
full height.—*Bacon.*

In China they speak of a tree called magual,  
which affords not only good drink, being pierced,  
but all things else that belong to the subsistence of  
man. . . . It bears huge nuts, which have excellent

they make tents; and the dotard trees serve for  
string.—*Lowell, Familiar Letters, ii, 54.*

gestures.—*Bacon.*

On ascending from this cerry to the moor-ground  
above, I happened to come upon a dotterel (Chara-  
drius Morinellus), which flew from among stones,  
pretending to be crippled, and hovered around,  
sometimes humping on the ground, and sometimes  
flying to short distances. I should for two of my  
companions, who had gone ahead towards the sum-  
mit of the mountain, and who returned accordingly.  
Although it was evident the bird had a nest or  
young ones, as it kept near, and on being pursued

lame so as to be easily caught, we failed to discover  
its charge.—*Macgillivray, Natural History of Des*  
*Side and Braemar.*

are by nature most compatible: valour with anger,

**Dragsman.** s. [taken, probably, through the medium of some language of the Mediterranean, from the Turkish, into which it

was introduced from the Arabic (*Truzhe-man*), the oldest example of the word being found in the Chaldee.] Interpreter in the Turkish administration; interpreter in the East in general. See also Druggerman.

The consul's dragsman, a grand-looking Israelite, prepared to go on the expedition.—*W. L. Russell, The Crimean War*, ch. iv.

**Dragon.** s. [Fr.; from Lat. *draco*, -onis.]

1. Kind of winged serpent.

I go along,  
Like to a lonely dragon, that his fen  
Makes fear'd and talk'd of more than seen.  
*Shakespeare, Coriolanus*, iv. 1.

And you, ye dragons of the seely race,  
Whom glittering gold and shining armours grace;  
In other nations harmless are you found,  
Their curst and cruel and profectious own'd.  
On spiny volumes there a dragon rides;  
Here, from our strict embrace, a stream he glides.  
*Pope*.

2. Fierce violent man or woman.

Procy (I know) is indeed the same as ever: kind in act and thought; impetuous in temper; eager to command; a tyrant over her Michael: a dragon amongst all the ladies of the regiment; a mother to all the young men, whom she tends in their sickness, defends in all their scrapes, and with whom Lady Procy is immensely popular.—*Thackeray, Vanity Fair*, ch. xliii.

**Dragon-beam, or Dragon-piece.** s. [Lat. *trigon*.] See extract.

A dragon beam, or piece, in carpentry is a short beam or piece of timber lying diagonally with the wall-plates at the angles of a roof for receiving the heel or foot of the hip rafter. It is fixed at right angles with another piece called the angle-tie, which is supported by each returning wall-plate, on which it is cocked down.—*Owitt, Encyclopædia of Architecture*.

**Dragon-water.** s. [two words.] Old medicinal wash or mixture so called.

Or dragon water may do good upon him.

**Drâgonet.** s.

1. Little dragon.

Or in his womb might lurk some hidden nest  
Of many dragonets, his fruitful seed.  
*Spenser, Faerie Queen*.

The dragon lay dead, for the foot of the veriest babe to trample on. But—like as was rather feared than realised from that slain monster in Spenser—from the womb of those crushed errors young dragonets would creep, exceeding the prowess of so tender a Saint George as myself to vanquish.—*Lamb, Essays of Elia, Witches and other Night Fears*.

2. Fish so called. See extract.

The common dragonet (*Callionymus lyra*), so called from its brilliant gemlike colours, was first described as a British fish by Dr. Tyson; . . . the second term, that of *dragonet*, was deduced by Pennant from the trivial name attached to the second species, *draconula*; that name, in its turn, having probably been given, with a double reference to its speckled appearance, and also to the large winglike ventral and pectoral fins which induced *Bacon, Nona*, and others, to consider these species as allied to the flying fishes. When examining books to obtain local and provincial names for the various fishes to be included in this work, I find that I made the mistake of transferring the name of Gaudle to the Great Weaver, instead of to the gemmous dragonet. The prevailing colour of this last-named fish is a golden yellow; it is called the Yellow Skulpin in Cornwall. The word *Dragonet* is so called probably from the dingy hue of its colours as compared with those of its generic companion.—*Farrill, British Fishes*.

**Dragonfly.** s. Large native neuropterous insect of the genus *Eshna*.

The body of the cantharides is bright coloured; and it may be, that the delicate coloured dragonflies may have likewise some corrosive quality.—*Bacon, Natural and Experimental History*.

Of the neuropterous sort, of the dragon-flies are pre-eminently beautiful; one species, with rich brown-coloured spots upon its many wings, is to be seen near every pool. Another, which darts above the mountain streams in Ceylon, and amongst the hills descending towards Kandy, gleams in the sun as if each of its green enamelled wings had been adorned from an emerald.—*Sir J. E. Tennent, Ceylon*, pt. ii. ch. vi.

**Dragonish.** adj. Having the form of a dragon; dragonlike.

Sometimes we see a cloud that's dragonish;  
A vapour sometimes like a hear or lion.  
*Shakespeare, Antony and Cleopatra*, iv. 12.

He fights dragonlike, and does achieve as soon  
As draw his sword.  
*Shakespeare, Coriolanus*, (v. 7.

**Dragonsblood.** s. See extracts.

**Dragonsblood** is a resin, so named as to seem to have been imagined an animal production.—*Sir J. Hill*.

Take dragonsblood, beat it in a mortar, and put it in a cloth with aqua vitæ, and strain them together.—*Præpar.*

*Dragon's blood* is a resinous substance which comes to us in small balls of the size of a pigeon's egg, sometimes in rods like the finger, sometimes in irregular cakes. . . . *Dragon's-blood* is chiefly used for tinging spirit and turpentine varnishes, for preparing gold lacquer, for tooth tinctures and powders, for staining marble, &c.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

The natural secretion of the fruit of the Calamus Draco constitutes the best dragon or dragon's blood, a dark-coloured, gummy, insipid resin; a second and inferior kind is produced from the fruit from which the natural secretion has been removed by heat, and bruising; the third and most inferior kind appears to be the refuse of the last process. It is doubtful whether this article is procured from the plant by incisions as has been supposed. . . . Resinous matters have been yielded in abundance by some species [of Liliaceæ]. . . . Of these the most celebrated is *dragon's blood*, a tonic, astringent resin, sometimes employed in diarrhoea and passive hæmorrhages: it is yielded in part by the *Dracena Draco* from the surface of the leaves, and from the cracks in its trunk; this, however, is scarcely known to modern druggists, who sell the astringent resin of *Pterocarpus*. . . . The *Dalbergia monetaria* of Annam yields a resin very similar to *dragon's blood*.—*Lindley, Vegetable Kingdom, Palmæaceæ, Liliaceæ, and Fabaceæ*.

**Drâgon-tree.** s. Tree producing the Dragonsblood.

Two or three hundred years are estimated to form the extreme length of life in a date palm and many others. But when, as in the *drâgon-tree*, the degree to which the stem will grow in diameter is indefinite, the age seems, as in exegesis, to be indefinite also. Thus a famous specimen of the *Dracena Draco*, of Orata, in Teneriffe, was an object of great antiquity so long ago as A. D. 1402, and is still alive.—*Lindley, Vegetable Kingdom*, p. 90.

**Drâgon.** s. Soldier so called, originally mounted on horseback and armed with a dragon [Fr.] or kind of carbine.

Two regiments of drâgons suffered much in the late action.—*Tait*.

I am persuaded that this most inhuman and barbarous persecution of the innocent French heretics, (as they miscall them,) will make all sober papists abhor the Pope and his party, who use such unchristian and antichristian means to make proselytes, and endeavour to bring men to the catholic faith (as they pretend) by dragons, and impositions; not by demonstrations and reasons out of Scripture.—*Bishop Barlow, Remains*, p. 295.

**Drâgon.** v. a. Persecute by abandoning a place to the rage of soldiers.

In politics I hear you're staunch,  
Directly bent against the French;  
Deny to have your free-born son  
Dragon'd into a wretched slave.  
*Prior*.

Lewis the Fourteenth is justly censured for trying to dragon his subjects to heaven. But it was reserved for James to torture and murder for the difference between two roads to hell.—*Maurice, Critical and Historical Essays, Sir James Mackintosh's History of the Revolution*.

**Drâgonade.** s. Abandonment of a place to the rage of soldiers.

It was supported by the authority of a great king, and the terror of ill usage, and a dragonade in conclusion.—*Bishop Burnet, History of his own Time*, an. 1698.

mured at the increased burthens to which they were

for enterprises in which the nation had no concern.  
—*Dug, History of modern Europe*, b. ii. ch. vii.

drink, raiseth your character.—*Swift.*

## 4. Spirits; distilled liquors.

**Druma. s.** [Gr.] Poem accommodated to  
action; in which the action is not  
related, but represented: (preceded by *the*,  
it means dramatic literature, dramatic re-  
presentation, and the like).

Many rules of imitating nature Aristotle drew  
from Homer, which he fitted to the *druma*; furnish-  
ing himself also with observations from the theatre,  
when it flourished under Aeschylus, Euripides, and  
Sophocles.—*Dryden.*

Ho (Lycurgus) was the author of a reformation—  
the precise nature of which is not sufficiently ascer-  
tained to be stated here—for the better management  
of the comic *druma*. But he conferred a more last-  
ing benefit on his country, and on all posterity, by  
another measure designed to honour and preserve  
the memory and the works of the three great tragic  
poets in whom Athens was indebted for so large a  
part of her literary fame. The *drumas* of Sophocles  
and Euripides, if not of Aeschylus, were still fre-  
quently exhibited: they were acknowledged as the  
most perfect models of dramatic poetry; but this  
did not prevent them from undergoing a fate simi-  
lar to that which has so often befallen the works of  
our early dramatists: they were frequently interpo-  
lated and mutilated by the actors.—*Thirlwall, History*  
*of Greece*, ch. lvi.

figures unskillful *dramatists* draw of the characters  
of men, that youth are bewildered and prejudiced in  
their sense of the world. *Tatler*, no. 191.

*Drama*.)

ingly as he might afford.—*Bacon.*

**Draps. v. a.** [from Fr. *draper*.] Chiefly in  
*Painting and Sculpture*. Invest with *dra-*  
*péry*.

Both have the same extraordinary acquirements  
and qualifications of body as well as of mind; both  
have the same spirit of daring and revolt against  
commonplace—a spirit rakish and reckless in the  
one, but carefully controlled and artistically *draped*  
in the other.—*Saturday Review*, August 5, 1865.

**Draps. v. a.** [from Fr. *draper*.] Jeer; ga-  
telize.

applied, in *Medicine*, to strong and quick  
purgatives).

*Draught* in masonry [is] a part of the surface of the stone down to the breadth of the chisel on the margin of the stone, according to the curve or straight line to which the surface is to be brought. When the draughts are framed round the different sides of the stone, the intermediate part is wrought to the surface by applying at right angle or temple. In very large stones when the substance needs much reduction, it is usual to make several intermediate parallel draughts, and thus the intermediate parts may be hewn down nearly by the eye, without much application of the straight edge or temple.—*Gwilt, Encyclopedia of Architecture.*

18. Game so called, in which sense the word is plural. The singular form is used with board, giving draughtboard as the checkered tablet on which the game is played; the original seems to have been draught = move at chess.

ing, Water-table, and Hoodmould, [is] a projecting  
tablet or moulding over the heads of doorways,  
windows, archways, niches, &c., in Norman and  
Gothic architecture. This member is manifestly  
derived from the upper or outer moulding of the  
Roman arch. . . . It cannot have been intended to  
throw off rain, for it is used quite as much in inter-  
nal as in external work. Hence such terms as  
*Dripstone*, &c., convey an erroneous idea. The term  
Label is borrowed from heraldry, and therefore, in  
strictness, is only applicable to the straight form which  
is used in perpendicular work, which resembles the  
heraldic label. The ancient English term for this  
member was *Hoodmould*, which is perfectly descrip-  
tive. This, as Mr. Wilson informs us, is still in use  
in Yorkshire, where many old masonic terms re-  
main.—*Glossary of Architecture*, in voce.

As he was observed to pour into each cask a small bottle of transparent liquor, it occurred to me, that this could be no other than the spirit of sea-salt.—*Sir W. Forster, On the Muriatic Acid, p. 7: 1790*.

‘Providence, sir,’ continued the alderman, ‘blessed my efforts, and increased my means;—from a retail dealer in drillets, I became a merchant;—a wholesale trafficker;—exactly like our good friend Hull;—in every thing, from barrels of gunpowder down to a pickled herring. With the name of legion club. *Swift*.

A man of wealth is *dubbed* a man of worth;  
Venus shall give him form, and Amos birth. *Pope*.

[The origin of the expression of *dubbing* a knight has been much canvassed, and it has been plausibly explained from the accolade or blow on the neck with

which marked the conclusion of the ceremony. I believe, *dubba*, to strike; French, *dubler*, *duber*, to beat, swing, canvass thoroughly. (Cotgrave.) But the accolade was never anything but a slight tap, and it is very unlikely that it should have been designated by a term signifying a sound beating. Nor have we far to seek for the real origin.

The principal part of the ceremony of *dubbing* a knight consisted in investing him with the habiliments of his order, putting on his arms, buckling on and his spurs. Now in all the Romance languages is found a verb corresponding to it:

English *dub*, signifying to arrange, dress, prepare, fit for some special purpose. Provençal, *adobar*, to arrange, prepare, dress victuals. French, *douber*, to rig or trim a ship; *adoubier*, to dress, set fitly together, arm at all points. (Cotgrave.)  
‘La dame s'est moult tost armée  
Et com chivalier *adoubée*.’  
(Fab. et Contes, iv. 291.)

Catalonian, *adobar*, to repair, dress leather, dress or manure land; Spanish, *adobar*, to dress or make anything up, cook meat, pickle pork, tan hides; *adobar*, dressing of any kind, as paint for the bar, pickle, or sauce, ingredients for dressing leather; English, to *dub* cloth, to dress it with tawels; to *dub* a cock, to prepare it for fighting by cutting off its comb and wattles; *dubbing*, a dressing of flour and water used by weavers, a mixture of tallow for dressing leather. The origin is preserved in Sclavonic. Bohemian, *dub*, an oak, oak bark, tan; *de-biti*, to tan; Lithuanian, *dubas*, tan; *dobai*, *dobai*, tanners' lie. From the images of tanning leather the term seems to have been extended to any kind of dressing.—*Wetwood, Dictionary of English Etymology, in voce*.

The last verse of Susan was to get rid of, at all events. It threw a kind of *dubiety* upon Susan's moral conduct. Susan is a servant maid. I see her trundling her mop, and contemplating the whirling phenomenon through blurred optics, but to term her 'a poor outcast' seems as much as to say that poor Susan was no better than she should be, which I trust was not what you meant to express. *Lamb, Letter to Wordsworth*.

**Ducal. adj.** Pertaining to a duke.

Every English sovereign had, from time immemorial, considered the lands to which he had succeeded in virtue of his office as his private property. Every family that had been great in England, from the De Vere down to the Hydes, had been enriched by royal deeds of gift. Charles the Second had carved *ducal* estates for his bastards out of his hereditary domain. —*Addison, Freeholder*.

Ducking was a very ancient punishment. A post was fixed in a pond, upon the former was placed a transverse beam, turning on a swivel, with a chair at one end of it. In this the seducing woman was placed, and the end turned to the pond, and let down into the water. In 1718, during the mayoralty at Bristol of Edmund Mountjoy, the *duckingstool* was used as a cure for seducing in one particular inveterate instance; but the husband of the lady whose evil spirit was so laid, when the year of civic supremacy had expired, brought his action of battery.—*Fosbroke, Encyclopædia of Antiquities*.

The challenging and fighting with a man is called *duelling*.—*Locke.*

Be search'd like *duellists* before they fight.

*Dryden.*

You imagine, perhaps, that a contempt for your own life gives you a right to take that of another; but where, sir, is the difference between a *duellist* who hazards a life of no value, and the murderer who acts with greater security? 2. One who professes to study the rules of honour.

He fights as you always prick-song, keeps time, distance, and proportion . . . the very butcher of a silk

button, a *duellist*, a *duellist*; a gentleman of the very first house—of the first and second cause! Ah! the immortal pseudo! the punto reverso!—*Shakespeare, Romeo and Juliet*, ii. 4.

His bought arms Mung not lik'd; for his first day

They are first fed and nourished with the milk of a strange *dug*.—*Sir W. Raleigh, History of the World.*

**Dugong.** *s.* [?] Herbivorous cetaceous animal so called (Malicore Dugong).

The third and most interesting group of this order is that of Manatus, composed of such Cetacea as are herbivorous; that is, deriving their nourishment alone from vegetables. From this circumstance, they have been vulgarly called sea cows or sea horses, but they are better known by the name of Manatinus, or dugongs. So closely do they resemble the wals, and more especially the walrus, that Linnaeus classed them in the same genus, and all naturalists admit their affinity. They are large animals, but much inferior to the whales; . . . they are provided with webbed feet of claws at their extremities, which they use with tolerable dexterity in creeping and carrying their young ones.—*Strawson, Natural History and Classification of Quadrupeds*, § 180.

One of the most remarkable animals on the coast is the *dugong*, a phytophagous cetacean, numbers of which are attracted to the inlets from the bay of Calcutta to Adam's Bridge, by the still water and the abundance of marine algae in these parts of the gulf. The rude approach to the human outline observed in the shape of the head of this creature, and the attitude of the mother while suckling her young, holding it to her breast with one flipper, while swimming with the other, holding the heads of both above water, and when disturbed, suddenly diving and displaying her fish-like tail,—these, together with her habitual demonstrations of strong maternal affection, probably gave rise to the fable of the 'mermaid,' and thus that earliest invention of mythical physiology may be traced to the Arab women and the Greeks, who had watched the movements of the *dugong* in the waters of Manar. Megasthenes records the existence of a creature in the ocean, near Taprobane, with the aspect of a woman; and *Ellen*, adopting and enlarging on his information, peoples the seas of Ceylon with fishes having the heads of Hens, panthers, and rams, and, stranger still, cetaceans in the form of satyrs. Statements such as these must have had their origin in the hairs which are set round the mouth of the *dugong*, somewhat resembling a beard, which *Ellen* and Megasthenes both particularise from their resemblance to the hair of a woman.—*Sir J. E. Tennent, Ceylon*, pt. ix. ch. vii. p. 555.

And, in conclusion, *dumbly*, have broke off,  
Not paying me a welcome. *Shakespeare, Midsummer-Night's Dream, v. 1.*

**Dumbness, s.** Attribute suggested by *Dumb*.

1. Incapacity to speak.

[The term] *dumbness* or aphonia . . . is generally applied to persons who are either born deaf or become so in early infancy. . . . The consequence of this is that the organs of speech are never called into due action. . . . *Dumbness* may also arise from injury to the lingual nerves, or from great general or local debility. . . . It is remarkable that the loss of the tongue does not necessarily occasion *dumbness*; this has happened from disease, and among barbarous nations the tongue was occasionally extirpated; yet cases are on record showing that even under such circumstances speech was in some degree retained.—*Brande, Dictionary of Science, Literature, and Art.*

2. Omission of speech; muteness.

There was speech in their *dumbness*, language in their very gesture; they look'd as they had heard of a world manac'd, or one destroyed.—*Shakespeare, Winter's Tale, v. 2.*

**Dummy, s.** One who is dumb; at the game of whist, when played by three persons instead of four, the exposition of the fourth hand is considered equivalent to a player, and is called *dummy*, the partner having the direction of it; hence the term is applied generally to objects of which the personal character is little more than nominal.

And now he propos'd that we should play double *dummy*.—*Diary, Italian Group.*

The Minerva . . . was a vessel of war belonging to the Dutch government, which had been chased by English cruisers into the neutral port of Bergen. There she had been purchased by a certain Lord of Kniphausen, who appears to have been some sort of continental sovereign, and who is always spoken of by Karl Stowell with much respect as an 'august person.' She sailed from Bergen to this potentate's private port of the river Jade, and on her way she was captured by an English man-of-war. The Lord of Kniphausen claimed that she should be given up to him, but the 'august person' claimed in vain. . . . The Minerva was condemned . . . because the circumstances of the transfer were such as to raise the presumption that she would resume at the earliest opportunity the character of a Dutch man-of-war. The 'august person' was merely a *dummy* netting for the Dutch government.—*Saturday Review, September 3, 1864.*

**Dumpy, s.** [See last extract.]

1. Narrow; melancholy; malice.

2. Melancholy tune or air; elegy.

If thou wert not some blockish and senseless dolt,  
thou wouldst never laugh when I sung a heavy mist  
Lydian tune, or a note to a *dump* or doleful ditty.—*Holland, Translation of Pontarch's Morals, p. 61.*

The life which I live at this age is not a dead, *dumpleish*, and sour life; but cheerful, lively, and pleasant.—*Lord Herbert of Chesham, Memoirs.*

**Dumpleishly, adv.** In a *dumpleish*, moping, melancholy manner.

And for dispositions; how do we see one so ragingly furious as if he had newly torn off his chains, and escaped; another so stupidly senseless, that you may thrust pins into him up to the head,

and he startles not at it: one so *dumpleishly* sad, as if he would freeze to death in melancholy, and hated any contentment but in sorrow.—*Bishop Hall, Select Thoughts, III. 723.*

**Dumpleishness, s.** Attribute suggested by *Dumpleish*; sadness; melancholy.

How many worthy Christians are there in the world who wear a part with us in this just blame; who have yielded over themselves to a disconsolate heartlessness, and a sad dejection of spirit; partly through a natural disposition inclining to *dumpleishness*, and partly through the prevalence of temptation. *Bishop Hall, Christ Mystical.*

He had need to be more than man, that can contentedly make himself contemptible, to follow Christ; to have his religion judged hypocrisy; his Christian prudence, craft and policy; his godly simplicity, silliness; his zeal, madness; his contempt of the world, ignorance; his godly sorrow, *dumpleishness*.—*Jaimes, Sin Stigmatised, p. 704.*

**Dun, adj.** [from A.S. *dun*.]

1. Colour partaking of brown and black.

We are not to expect a strong and full white, such as is that of paper; but some dusky obscurity, such as might arise from a mixture of light and darkness, or from white and black, that is, a grey, or *dun*, or russet brown.—*Sir I. Newton, Opticks.*

The colour of his skin was not quite black, but very tawny; and yet not an ugly, yellow, nauseous tawny, as the Brazilians and Virginians, and other natives of America are, but of a bright kind of a *dun* olive colour, that had in it something very agreeable, though not very easy to describe.—*De Foe, Life and Adventures of Robinson Crusoe.*

2. Dark; gloomy.

Come, thick night!  
And pall thee in the dunn'd smoke of hell. *Shakespeare, Macbeth, I. 5.*

He then survey'd  
Hell, and the gulph between, and Satan there  
Coasting the wall of heav'n on this side,  
In the *dun* air sublime. *Milton, Paradise Lost, III. 60.*

**Dun, v. a.** [from A.S. *dunan* = cry out, clamour.] Claim a debt with vehemence and importunity.

Without a suit before the tribune, pay. *Dryden, Juvenal's Satires.*

**Dunbird, s.** See Pochard.

**Dunce, s.** [see extracts from Todd, Wedgwood, &c.] Dullard; dolt; thickskull; stupid, indocile animal.

Remember ye not within this twenty years and far less, and yet dureth unto this day, the old barking currus *Dunce's* disciples, and like draffle called scottists, the children of darkness ragod in every pulpit against Greek, Latin, and Hebrew.—*Tyndal (Ed.).*

We have set *Dunce* in Bourne, and have utterly banished him Oxford for ever, with all his blind gloom. . . . And the second time we came to New College after we had declared your injunctions, we found all the great quadrant court full of the leaves of *Dunce*,

the wind blowing them into every corner. And there we found one Mr. Greenfield, a gentleman of Buckinghamshire, gathering up part of the same book leaves, as he said, thorough to make him sewers or bladders to keep the deer within his wood, thereby to have the better cry with his hounds.—*Strype, Ecclesiastical Annals*, l. 333. (Crab.)

**Dunce** at the best; in streets but scarce allow'd. To tickle, on thy straw, the stupid crowd. *Dryden*. Was Epiphanius so great a dunce to imagine a thing, indifferent in itself, should be directly opposite to the law of God?—*Bishop Stillingfleet*.

I never knew this town without dunces of figure, who had credit enough to give rise to some new word.—*Swift*.

[A] **Dunce**, stupid, Dr. Johnson says. *Minsheu* derives it from *dunus*, thick; Skinner from the Spanish, *tonfo*, stupid. None of these will be received. *Ben Jonson* offers the Swedish, *dunser*, a heavy-footed man. In the margin of Mr. Horne Tooke's copy of Johnson's dictionary are these words: 'Perhaps a word of reproach first used by the Thomists, from *Dunce* Scotus, their antagonist; but we must first find out when this word began to be used.' I had made a similar remark, many years since; and am enabled to strengthen it, by what Mr. Tooke had not met with, an example in point: 'They hate even to death all them that preach the pure words of God, vocal of all the dregges of Dunnon learning and man's traditions.' Confutation of Nicholas Shaxton, 1546, sig. F. iii. See also A. Wood, *Pastor Conventus*, 1601, vol. i. col. 673. 'The cardinal would write that the said Winter should study the *Dunces*' logic questions, meaning, I suppose, the logic questions of John *Dunce*.—*Swift*.

Observe, my English gentleman, that blowers have a wonderful prerogative in the feminine sex; for, if she be a bad woman, there is no more proper plaster to mend her than this; but if (which is a rare chance) she be good, to *dust* her often hath in it a singular, unknown, and, as it were, an inscrutable virtue to make her much better and to reduce her, if possible, to perfection. —*Pasenger of Beauvais: 1612. (Nares by H. and W.)*

**Duster. s.**

1. That which frees from dust: (either by *wiping*, as with a cloth; or by *sweeping*, as with a brush).

A *duster* made of a fox-tail fastened to a staff.—*Colgrave, in v. Viacomperard.*

Otho, as often as Galba supped with him, used to  
give every soldier upon duty an aureus.—*Arbuthnot,  
Tables of ancient Coins, Weights, and Measures.*

## 6. Tax; impost; custom; toll.

All the winks make their way through several  
duties and taxes, before they reach the port.—*Ad-  
dison.*

Canada . . . has by her high import duties raised  
up against herself a protected manufacturing in-  
terest. These duties . . . are now said to be imposed  
only with a view to revenue. . . . The duties have  
been high enough to divert Canadian capital from  
its natural investment in the opening up, improv-  
ing, and settling a vast territory hitherto very  
sparsely inhabited, and to turn it into the prema-  
ture creation of manufactures. This result has  
of course been produced, not by the effect of the high  
duties in raising a revenue, but by their effect in  
keeping out foreign manufactured goods. . . . If the  
Canadian duties were low in amount, there would  
be imported into Canada not only enough of better  
and cheaper goods than she now obtains for her own  
consumption, but for the consumption of a very  
considerable portion of the United States. The  
Canadian high duties are a great protection to the  
United States against that vast and systematic  
smuggling across the frontier which the American  
tariff encourages. . . . She must at length become  
alive to the fact that high duties do not raise large  
revenue merely because those who impose them  
declare that they are imposed with that purpose,  
and that if the wealth of states and individuals  
must arise from trade and commerce, the first care  
of the state ought to be to leave trade and com-  
merce unobstructed.—*Times, August 11, 1905.*

## Dutyable. adj. Liable to duty, or duties, in the commercial sense of the term.

Throng numberless.

A dwarf behind his steam-engine may move  
mountains; but no dwarf will bear them down with a  
pleasure; and he must be a Titan that hurles them  
aboard with his arms.—*Carlyle, Miscellaneous Es-  
says, Burns.*

## Applied to undersized objects in general.

a delicate plantation of trees, all well-grown,  
792

# DWEL

fair, and smooth, one dwarf was knotty and crooked,  
and the rest had it in derision.—*Sir R. L'Estrange.*

## Used adjectively, or as the first element in a compound.

Saw off the stock in a smooth place; and for dwarf  
trees, graft them within four fingers of the ground.  
—*Mortimer, Husbandry.*  
Great is this mystery of podliness,  
Exceeding man's dwarf wit.  
*Fitzgibbon, Blessed Birthday, p. 23: 1694.*

## Dwarf. v. a. [for final f see ELF.] Hinder from growing to the natural bulk; lessen; make little.

It is reported that a good strong canvas, spread  
over a tree, grafted low, soon after it putteth forth,  
will dwarf it, and make it spread.—*Bacon, Natural  
and Experimental History.*

into a race of beauties that seems almost another  
species.—*Addison.*

Thus it was, that the national character of the  
Scotch was, in the seventeenth century, dwarfed and  
mutilated.—*Buckle, History of Civilization in  
England, vol. ii. ch. v.*

## Dwarf. v. n. Become dwarfish or stunted in growth.

As it grew, it dwarfed.—*Buckle, History of Civil-  
ization in England, vol. ii. ch. ii.*

*Dryden.*

We should have lost oaks and cedars, and the  
other tall and lofty sons of the forest, and have  
found nothing but dwarfish shrubs, and creeping  
moss, and despicable mushrooms.—*Bentley.*

## Dwarfishness. s. Attribute suggested by Dwarfish; minuteness of stature; little- ness.

So when our blessed Saviour tells us we cannot  
by our taking thought add to our real stature one  
cubit; he doth not hereby deny the possibility or  
lawfulness of setting ourselves higher than naturally  
we are, either by the heels of our shoes, or by pat-  
terns or seats, and the like inventions, which seek to  
give an advantage of proberity and comeliness to  
our stature; which, if shrunk to a dwarfishness, and  
epitomized to a decimo-sexta, makes the persons of  
men and women subject to be as little in the eyes  
and esteem of others, as they are in their own inches  
or size.—*Jeremy Taylor, Artificial Handooms, p.*

## Dwarfing. s. Diminutive dwarf.

When the dwarfing did pervade me.  
*Spenser, The Bards, (Trench.)*

## Dwarfy. adj. Below the common size of men.

Though I am squint-eyed, lame, bald, dwarfy, &c.  
yet these deformities are toys.—*Waterhouse, Apology  
for Learning, p. 45: 1653.*

## Dwell. v. n. [Danish, *drale*—tarry; in A.S. *drelium*=deceive.—Wedgwood connects the two meanings balk, hinder, delay.]

And clapt his iron wings, as victor he did dwell.  
*Spenser, Faerie Queene, l. 11. 31.*

### 2. Inhabit; live in a place; reside; have a habitation.

Here dwell no frowns nor anger; from these gates  
Sorrow flies far.  
*Milton, Comus, 608.*

### 3. Live in any form of habitation.

Abraham sojourn'd in the land of promise as in a  
strange country, dwelling in tabernacles.—*Hebrews,  
xl. 9.*

### 4. Be in any state or condition.

'Tis safer to be that which we destroy,  
Than by destruction dwell in doubtful joy.  
*Shakespeare, Macbeth, iii. 2.*

### 5. Be suspended with attention; hang upon with care or fondness.

He in great passion all this while did dwell;  
More busy his quick eyes, her face to view,  
Than his dull ears, to hear what she did tell.  
*Spenser.*

Such was that face, on which I dwell with joy,  
Ere Greece assembled stunn'd the tides to Troy.  
*Pope.*

### 6. Continue long speaking.

He preach'd the joys of heaven, and pains of hell,  
And warn'd the sinner with becoming zeal;  
But on eternal mercy lov'd to dwell.  
*Dryden, Good Person.*

of space and duration.—*Locke.*

# DWIN

Those, who defend our negotiators, dwell upon  
their seal and patience.—*Swift.*

## Dwell. v. a. Inhabit. Rare.

I saw and heard; for we sometimes  
Who dwell this wild, constrain'd by want, come forth  
To town or village nigh.  
*Milton, Paradise Regain'd, l. 330.*

## Dweller. s. One who dwells; inhabitant; one who lives in any place.

The houses being kept up, did of necessity enforce  
a dweller; and the proportion of land for occupation  
being kept up, did of necessity enforce that dweller  
not to be beggar or cottager, but a man of some sub-  
stance.—*Bacon, History of the Reign of Henry VII.*

Their cries soon waken all the dwellers near;  
Now murmuring noises rise in every street.—*Dryden.*

## Dwelling. s.

### 1. Habitation; place of residence; abode.

His dwelling is low in a valley green.  
*Spenser, Faerie Queene.*

Haar shall be a dwelling for dragons, and a de-  
solation for ever.—*Jeremiah, xlix. 38.*

If he have several dwellings, let him sort them so,  
that what he wanteth in the one he may find in the  
other.—*Bacon.*

The living few, and frequent funerals then,  
Proclaim'd thy wrath on this forsaken place  
And now these few, who are return'd again,  
Thy marching judgments to their dwellings trace.  
*Dryden.*

### 2. State of life; mode of living.

Thy dwelling shall be with the beasts of the field,  
—*Isaiah, lv. 23.*

## Dwellinghouse. s. House in which one lives.

A person ought always to be cited at the place of  
his dwellinghouse, which he has in respect of his  
habitation and usual residence; and not at the  
house which he has in respect of his estate, or the  
place of his birth.—*Ayliffe, Parergon Juris Canonici.*

## Dwellingplace. s. Place of residence.

People do often change their dwelling-places, and  
some must die, whilst other some do grow up into  
strength.—*Spenser, View of the State of Ireland.*

## Dwindle. v. n. [A.S. *dwinan*.]

### 1. Shrink; lose bulk; grow little.

Proper names, when familiarized in English,  
*dwindle* to monosyllables; whereas in other lan-  
guages they receive a softer turn, by the addition of  
a new syllable.—*Addison.*

A contemporary writer, who was evidently well  
acquainted with Ireland, asserted that the authors  
of the report had valued the forfeited property in  
Carlow at six times the real market price, and that  
the two million six hundred thousand pounds, of  
which they talked, would be found to shrink to  
about half a million, which, as the exchanges then  
stood between Dublin and London, would have  
devalued to four hundred thousand pounds by the  
time that it reached the English Exchequer.—*Mac-  
aulay, History of England, ch. xxv.*

During the following summer and autumn, the  
coins went on dwindling, and the cry of distress  
from every county in the realm became louder and  
more piercing.—*Idiot, ch. xxi.*

From which mode of presenting the facts it will  
become manifest not only that, as we all know, hy-  
pothesis must precede induction; but further, that  
every hypothesis is an induction in the incipient  
stage: capable of being developed into one if there  
are facts for it to assimilate; fated to *dwindle* away  
if there are none.—*Herbert Spencer, Principles of  
Psychology.*

### 2. Degenerate; sink.

If there have been such a gradual diminution of  
the generative faculty of the earth, that it hath  
*dwindled* from nobler animals to puny mice and  
insects, why was there not the like decay in the  
production of vegetables?—*Bentley.*

Religious societies, though begun with excellent  
intentions, are said to have *dwindled* into factious  
clubs.—*Swift.*

He found the expected council was *dwindling* into  
a conventicle.—*Bishop Atterbury.*

### 3. Wear away; lose health; grow feeble.

Wear ye' nights, nine times nine,  
Shall he *dwindle*, peak, and pine.  
*Shakespeare, Macbeth, l. 3.*

We see, that some small part of the fact being  
injured by a wrench or a blow, the whole log or  
thigh thereby loses its strength and nourishment,  
and *dwindles* away.—*Locke.*

In the following extracts, the construction  
seems to be that of 'is gone,' &c., where  
the use of the copula gives the construction  
the appearance of being that of an active  
verb.

'Tis now *dwindled* down to a light frothy stuff.—  
*Norris.*

Under Greenville, there were only five hundred  
foot, and three hundred horse, left; the rest were  
*dwindled* away.—*Lord Clarendon, History of the  
Grand Rebellion.*

**Dwindled.** *part. adj.* Shrunk; fallen away. Setting up one foot parallel to the other; filling out the leanness of their *dwindled* legs, and the like.—*Jeremy Taylor, Artificial Happiness, p. 44.*  
**Dwindling.** *part. adj.* Shrinking; losing bulk.

Physicians, with their milky cheer,  
The love-sick maid and *dwindling* bean repair. *Gay.*  
**Dyad.** *s.* [Gr. *δυάς*, *δυάδα*.] Two units treated as one; pair; couple. *Rare.*

A point answers to a monad, and a line to a *dyad*, and a superficies to a triad.—*Cutworth, Intellectual System, p. 376.*

**Dye.** *v. a.* [A.S. *deagan*.] Tinge; stain; colour.

Moses speaks of a raiment *dye'd* blue, and purple, and scarlet, and of sheepskins *dye'd* red. . . . Tyre, however, was the nation of antiquity which made *dyeing* its chief occupation and the staple of its commerce. . . . Homer marks no less the value than the antiquity of this *dye* by describing his heroes as arrayed in purple robes. . . . *Dyeing* is little cultivated in ancient Greece. . . . *Dyeing* baths are copper basins heated directly by a furnace, or by means of steam conducted by a pipe from a boiler at a certain distance from the bath. . . . Those *dye-baths* . . . whose colouring matter is of the nature of extractive or gummy, form a *fluid* combination with stuffs. Thus the yellow, fawn, and brown dyes, which contain tannin and extractive, become oxygenated by contact of air, and insoluble in water; by which means they can impart a durable dye.—*Ure, Dictionary of Arts, Manufactures, and Mines, Dyeing.*

**Dye.** *s.* Colour effected by, or material used for, dyeing.

(For example see extract under preceding entry.)

**Dyebath.** *s.* Bath, vat, or cistern for dyeing. (For example see extract under Dye.)

**Dyédrag.** *s.* Drug for dyeing. (For example see extract under Dyestuff.)

**Dyehouse.** *s.* House or establishment for dyeing. (For example see extract under Dyestuff.)

**Dyeing.** *verbal abs.* Act of one who dyes; process for obtaining a dyer's colour.

Archil is, in general, a very useful ingredient in *dyeing*; but as it is rich in colour, and communicates an alluring bloom, *dyes* are often tempted to abuse it, and to exceed the proportions that can add to the beauty without, at the same time, in a dangerous manner, affecting the permanence of the colours. . . . The lichen must be of the third year's growth to yield an abundant *dye*; and that which grows near the sea is the best. . . . Since more solid *dyes* of the same shade have been invented, the archil has gone much into disuse.—*Ure, Dictionary of Arts, Manufactures, and Mines, Archil.*

I conceive much light would be given to the philosophy of *dyeing*, by careful experiments of the weight added by each dye or salt, in *dyeing* of every colour.—*Sir W. Petty, Sprat's History of the Royal Society, p. 305.*

**Dyeing.** *part. adj.* Fit or liable to be used as dyes; constituting or forming part of a dye.

Some *dyeing* ingredients or drugs, by the coarseness of their bodies, make the thread of the dyed stuff seem coarser.—*Sir W. Petty, Sprat's History of the Royal Society, p. 303.*

**Dyer.** *s.* One who dyes. See Dye.

Verdigrise is used by Italian *dyers* in their yellow and greenish colours.—*Sir W. Petty, Sprat's History of the Royal Society, p. 293.*

**Dyestuff.** *s.* Raw material for dyeing.

This invaluable blue *dyestuff*, for which no tolerable substitute has been found, was known to the ancients as a pigment under the name of Indicum, whence its present denomination. . . . Its general use in the *dye-houses* of both England and France was kept back by absurd laws founded upon an opinion that it was a fugitive *dye-drug*, and even prejudicial to the fibre of wool. The plants which afford this *dye-drug* grow in the East and West Indies, in the middle regions of America, in Africa, and Europe. They are all species of the genera Indigofera, Isatis, and Nerium.—*Ure, Dictionary of Arts, Manufactures, and Mines, Indigo.*

**Dying.** *verbal abs.* Act of that which dies; passage from life to death: (common with day in a construction either *adjectival*, or that of the *first element* in a *compound*. This word has, even by high authorities, been treated as a participle or participial adjective. In such expressions as 'a *dying* man,' this is really the case, but not in the construction under notice).

And this for law I will maintain  
'Till my *dying* day, sir,  
That whatsoever king shall reign,  
'I'll be the vicar of Bray, sir. *Old Song.*

**Dyingly.** *adv.* In a dying manner; solemnly as if dying. *Rare.*

I can *dyingly*, and boldly, say,  
I know not your dissonance.

*Beaumont and Fletcher, Loe's Pilgrimage.*

**Dyke.** *s.* [the use of *y* in the spelling of this word is Dutch, and, as many of the great English drains were made under the direction of Dutch engineers, the word, in some cases, has been introduced under this form. As such, it is generally a proper, rather than a common, name. For the original English form, derived, along with *ditch*, from the A.S. *dic*, is most properly spelt with *i*; any instances to the contrary having arisen out of a confusion between the two concurrent forms.] In the following extract it means the embankment rather than the depression.

Then the whole Greek army poured into the town by the moles or *dykes* which they had thrown across from the main land to the shore of Motza, and the place was taken by storm.—*Arnold, History of Rome, ch. xxi.*

**Dynámic.** *adj.* [Gr. *δυναμική* = invested with power, acting as a power or force, *ἐνρπτική*.] Having the character of a force.

Magnetism, as was proved by the important discovery of Faraday, will produce electricity, but with this peculiarity, that in itself it is static; and therefore, to produce a *dynamic* force, motion must be superadded to it; it is, in fact, directive, not motive, altering the direction of other forces, but not, in strictness, initiating them.—*Grove, Correlation of Physical Forces.*

**Dynamical.** *adj.* Same as Dynamic: (of which it is the *commoner*, though not the more *correct*, form).

That relation between object and subject which is established the act of three distinct aspects, according as there is some species of activity on the part of the object; on the part of the subject; or on the part of both. If, while the subject is passive, the object is working an effect upon it, . . . there results in the subject, a perception of what is usually termed a secondary property of body; but what may be better termed a *dynamical* property. If the subject is directly acting upon the object by grasping, thrusting, pulling, or any other mechanical process; and the object is reacting, as it must, to an equivalent extent; the subject perceives those variously modified kinds of resistance which have been classed as the *secundo-prinary* properties; but which I prefer to class as *statico-dynamical*. And if the subject alone is active . . . then the property perceived is of the kind commonly known as *primary*, but here named *statical*. . . . Beginning with these contingent attributes as contemplated in themselves, let us, in the first place, consider the property of classing them as *dynamical*. The most familiar ones are obviously manifestations of certain forms of force. Of sound, we know, not only that it becomes sensible to us solely through vibrations of the membrane tympani—not only that these vibrations are caused by waves in the air; but we know that the body whence they proceed must be thrown into a vibratory state by some mechanical force: that it must propagate undulations through surrounding matter—and that in this purely *dynamical* action consists the production of sound. Respecting heat, . . . its multiplied phenomena are resolved into *dynamical* ones.—*Herbert Spencer, Principles of Psychology, ch. x. § 49.*

**Dynamics.** *s.* [for the final *s*, see Chromatics.] Doctrine or study of force or forces; that part of mechanics which deals with forces in action, as opposed to forces in equilibrium.

The treatise of Galileo, *Della Scienza Meccanica*, . . . is chiefly confined to statics, or the doctrine of equilibrium; it was in his dialogues on motion, *Della Nuova Scienza*, published in 1686, that he developed his great principles of the science of *dynamics*, the moving force of bodies. . . . Still less was known of the principles of *dynamics* than of those of statics, till Galileo came to investigate them. The acceleration of falling bodies, whether perpendicularly or on inclined planes, was evident; but in what *ratio* this took place, no one had succeeded in determining, though many had offered conjectures. He showed that the velocity acquired was proportional to the time from the commencement of falling.—*Hutton, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries, pt. iii. ch. viii. § 38, 39.*

It appears from our history, that certain truths concerning the equilibrium of bodies were established by Archimedes—that, after a long interval of inactivity, his principles were extended and pursued further in modern times;—and that to these

doctrines concerning equilibrium and the forces which produce it, (which constitute the science *Statics*;) were added many other doctrines concerning the motions of bodies, considered also as produced by forces, and thus the science of *Dynamics* was produced. The assimilation of these sciences composes the province of *Mechanics*. Moreover, philosophers have laboured to make out the laws of the equilibrium of fluid as well as solid bodies; and hence has arisen the science of Hydrostatics. And the doctrines of Mechanics have been found to have a most remarkable bearing upon the motions of the heavenly bodies; with reference to which, indeed, they were at first principally studied. The explanation of these celestial facts by means of mechanical principles and their consequences, forms the science of physical astronomy. These are the principal examples of mechanical science; although some other portions of Physics, as Magnetism and Electro-dynamics, introduce mechanical doctrines very largely into their speculations.—*Whewell, History of Scientific Ideas, b. iii. ch. i.*

The empirical laws of society are of two kinds: some are uniformities of co-existence, some of succession. According as the science is occupied in ascertaining and verifying the former sort of uniformities or the latter, M. Comte gives it the title of Social Statics, or of Social Dynamics; conformably to the distinction in mechanics between the conditions of equilibrium and those of movement; or in biology, between the laws of organization and those of life. The first branch of the science ascertains the conditions of stability in the social union; the second, the laws of progress. Social Dynamics is the theory of society considered in a state of progressive movement; while Social Statics is the theory of the consensus already spoken of as existing among the different parts of the social organism.—*J. S. Mill, System of Logic.*

**Dynamometer.** *s.* [Gr. *δυναμική* = power, and *μετρον* = measure.] Instrument for measuring power: (its application various, e.g. to the muscular power of animals and the force of steam; its construction varying accordingly).

The experiments with the Rattler and Aleeto give more precise results. . . . The power exerted by the engines of both vessels was ascertained by the indicator. The thrust also upon the screw shaft was ascertained by the *dynamometer*, an instrument consisting of a combination of levers, like a weighing machine for carts, in which a small weight balances a heavy pressure. . . . In some cases the *dynamometer* consists of a single long lever, the end of which is pressed by a spiral spring, and in other cases there is a combination of levers, by which the same purposes are sub-served.—*Bourne, Treatise on the Screw Propeller, ch. iv.*

**Dynast.** *s.*

1. Ruler; governor.

The ancient family of Des Eves, *dynasts* or lords of the dition of Kessel. *J. Wood, Athene Oxonienses, ii. col. 110: ed. 1822.*

2. Dynasty; government: (if it be not a *misprint*).

It might give some account for the heroic times of those Egyptian *dynasts*, pretending antiquity many years further back into the chaos than the Moslem legend.—*Gregory, Posthumus, p. 112: 1853.*

**Dynastic.** *adj.* Relating to, or consisting of, a dynasty; resting on the power of royal or ruling individuals, as opposed to the general sense of the community.

Prussia, ever mindful of strengthening her *dynastic* alliances, was connected with Russia too closely to hesitate.—*S. Edwards, The Polish Captivity.*

**Dynasty.** *s.* [Gr. *δυναστεία*; Fr. *dynastie*.]

1. Government; sovereignty.

Some account him fabulous, because he carries up the Egyptian *dynasties* before the flood, yea, and long before the creation.—*Sir M. Hale, Origin of Mankind.*

2. Race or family of rulers; epoch constituted by their reigns.

This was the light put into the hands of the next *dynasty* of theologians, the schoolmen.—*Leaves, On the Parousia, p. 18.*

**Dys-** [Gr. *δυσ*, a syllable only found in composition, wherein it suggests a notion of *badness*, as opposed to *εὖ*, suggestive of *goodness*. See Eu-]

**Dyscrasy.** *s.* [Gr. *δυσκρασία*.] Unequal mixture of elements in the blood or nervous juice; distemperature, when some humour or quality abounds in the body.

I will somewhat write of two *dyscrasies* of the body.—*Sir T. Elyot, Castel of Helthe, b. 3: 1541.*  
It is but a disease and *dyscrasy* in the soul.—*Cutworth, Sermons, p. 81: 1673.*

In this pituitous *dysenteria* of blood, we must vomit off the pituita, and purge upon intermissions.—*Sir J. P. Floyer, Præternatural State of the animal Humours.*

**Dysenteria.** *adj.* Relating to, constituting, or constituted by, Dysentery.  
(For example see first extract under Dysentery.)

**Dysenterious.** *adj.* Dysenteric. *Rare.*  
All will be but as delicate meats dressed for a *dysenterious* person, that can relish nothing, can retain nothing, receive no strength from them, is but the worse for them.—*Gualter, p. 184. (Ord M.)*

**Dysentery.** *s.* [Gr. *δυσεντερία* = bad condition of the intestines, *εντερία*.] In *Medicine.* Disease so called; looseness, wherein very ill humours flow off by stool, and are also sometimes attended with blood.

*Dysentery* was at least as prevalent in ancient as it has been in modern times. It is noticed by Hippocrates, Celsus, and particularly by Aretæus and Galen. The ancients were even not far wrong in their opinions respecting the seat of this disease, which they referred to the internal coats of the intestines, but attributed it too generally to erosion and ulceration. . . . The forms of *dysentery* are extremely diversified. . . . Stibule *dysentery* presents various states and grades of severity, depending upon the nature of the cause, the state of the secretions, and the degree of inflammatory irritation or of spasmodic action of the bowels resulting therefrom. It may be preceded by constipation, or by diarrhæa; or the *dysenteric* symptoms may appear from the first, and be attended by chills or rigors. . . . In the dark mass, *dysentery* is perhaps the most prevalent and fatal disease; and in respect it generally takes the place of fever, being, in the language of Sydenham, a low fever turned in upon the bowels. . . . Of the influence of exhalations from animal bodies in a state of decomposition, in causing the low forms of *dysentery*, I could produce, if my limits would permit, numerous proofs. Of the agency of impure water in producing *dysentery*, proofs are likewise numerous. I have myself seen several instances, in a warm climate, where it was the cause of the disease being epidemic there. In temperate countries, waters containing decayed animal matters, or an excess of uncombined alkali, cause diarrhæa more frequently than *dysentery*, or the former passing into the latter. But in warm climates, especially where water is collected and preserved in tanks,

and in autumn, after warm summers, in colder countries, *dysentery* is the most common result. I have no doubt that the *dysenteric* epidemic in London, during several successive autumns after the Great Plague, was owing to the same causes.—*Copland, Dictionary of Practical Medicine.*

From what has been said, it will be apparent that, compared with continental India, the securities for health in Ceylon are greatly in favour of the island. As to the formidable diseases which are common to both, their occurrence in either is characterized by the same appalling manifestations; *dysentery* festens, with all its fearful concomitants, on the unwary and incautious, and cholera, with its dark horrors, sweeps mysteriously across neglected districts, exacting its hecatombs.—*Sir J. E. Tennant, Ceylon, pt. I. ch. ii.*

**Dyspepsia.** *s.* [Gr. *δυσπεψία*, from *πένω* = concoct, in the sense of digest.] Indigestion.

*Dyspepsia* or indigestion [is] impaired or studious appetite; slow and difficult digestion; sensations of discomfort referable to the stomach, and frequently costiveness. *Dyspepsia* or indigestion has been employed as the generic designation of several disorders ranged under it as species, by most modern writers, and particularly by Sauvages and Cullen. Young and Good have limited the meaning of the term, by considering some of those disorders as altogether distinct from it. Dr. Todd, however, in an able and comprehensive article on the subject, has applied this term to all the functional disorders of the alimentary canal. . . . The continued or chronic form of *dyspepsia* may take place gradually or slowly, or as a consequence of the foregoing. . . . In the lighter states of irritative *dyspepsia*, the appetite is often increased, occasionally excessive, in some instances impaired; thirst is generally present, and burning or heat of the soles of the feet and palms of the hands frequently occurs, particularly in warm or temperate weather. . . . *Dyspepsia* may terminate in a restoration of the healthy function of digestion; it may pass into more severe functional or structural disease of the stomach; it may superinduce disease of the liver, bowels, and other collaterals organs; it may give rise to affections of remote organs or parts; and, lastly, it may cause functional disorder of the heart. . . . But neglected *dyspepsia* is most frequently followed by inflammatory action, and its consequences, in the villous coat of the stomach. . . . In both sexes, cutaneous eruptions either originate in, or are perpetuated by, *dyspeptic* dis-

orders, and by the state of the circulating fluids and of the cutaneous exhalation consequent upon them.—*Copland, Dictionary of Practical Medicine.*

**Dyspeptic.** *adj.* Characteristic of, consisting in, or relating to, indigestion.  
(For example see extract under Dyspepsia.)

**Dyspeptic.** *s.* Dyspeptic person.  
Habitual *dyspepsia*, and those affected by hepatic obstructions, had better avoid a lengthened sojourn in Ceylon; but the tortures of rheumatism and gout, if they be not reduced, are certainly postponed for longer intervals than those conical to the same sufferers in England.—*Sir J. E. Tennant, Ceylon, pt. I. ch. ii.*

**Dysphagia.** *s.* [Gr. *δυσφαγία* = inability to eat, or difficulty in eating; from *φαγω* = eat.] In *Medicine.* Difficulty in swallowing.

Inability to swallow, *dysphagia*, is another of the hysterical vagaries relating to the parts about the throat.—*Watson, Lectures on the Principles and Practice of Physic, lect. xxxviii.*

**Dyspnea.** *s.* [Gr. *δυσπνοία*, *πνέω* = breathe.] Difficulty in breathing.

*Dyspnea*, difficulty of respiration, is one of the most prominent of these symptoms. . . . In *dyspnea*, the breathing is almost always most difficult when the patient is lying flat on his back. One reason for this is plain. In the supine horizontal posture the action of the diaphragm is obstructed by the weight and pressure of the adjacent abdominal viscera, and the erect position obviates this. Upright breathing, orthopnea, has come to be considered a distinct modification of *dyspnea*. The patient cannot lie down.—*Watson, Lectures on the Principles and Practice of Physic, lect. xxxviii.*

**Dysuria.** *s.* Difficulty in passing urine.  
Sometimes pain and difficulty in making water are added; there is *dysuria*, the irritation of the rectum being reflected upon the bladder through the lower portion of the spinal cord.—*Watson, Lectures on the Principles and Practice of Physic, lect. lxxiii.*

**Dysury.** *s.* [Gr. *δυσουρία*; from *ουρίω* = pass urine.] Difficulty in making urine.

It doth end in a dysuric pain of the hæmorrhoids, inflammations of any of the lower parts, diabetes, a continual pissing, or a hot *dysury*, difficulty of making water.—*Hareng.*

## E.

### E

**E** The fifth letter in the English alphabet.

Except that it began with *H* (i.e. was aspirated), the Hebrew name was the same as the English, viz. *He*. This became in Greek, 'Ε φάλαξ = bare or naked *F*, as distinguished from *Eta*, which, word for word, is Aitch, the name of the English aspirate; but upon which we may remark that it begins with A instead of H. Putting these together, we may treat E, when under notice as the name of a letter, as the Hebrew *He* divested of its initial aspirate; in which case it is in the same category with *Aitch* and *Zed*; these being English forms of *Eta* and *Zeta*, and, as such, exceptional to the general rule concerning the names of the elements of the English alphabet, which is that they are approximations to the several sounds they are intended to suggest, rather than actual names, i.e. that they are in the category of A B D, rather than in that of Aleph, Beth, Daleth, or Alpha, Beta, Delta. The remarkable point, however, in E, is that the two methods coincide; E being in respect to its form the sound of the ee in *feet*, the Hebrew *He*, minus H, or the Greek 'Ε φάλαξ minus the que''tying adjective, indifferently. In An-

glo-Saxon, when preceded by a vowel, it was often sounded as *y*.

devotion; they are speechless for the time that it  
continues, and prostrate and dead when it departs.

—*Id.*

knowledge, if not warily regulated, is often an  
hindrance to it. *Locke.*

humours of his subjects.—*Hawell, Vocal Farcical.*

Another's faults and his deformity.

*Dryden, Persius's Satires, sat. iv.*

#### Eaglesstone. s. Stone, within another, said to be found at the entrance of the holes in which the eagles make their nests, and affirmed to have a particular virtue in defending the eagle's nest from thunder. See *Græde*.

If you stop the hole of a hawk's bell, it will make  
no ring, but a flat noise or rattle; and so doth the  
eagles, or eaglesstone, which hath a little stone within  
it.—*Bacon, Natural and Experimental History.*

The eaglesstone contains, in a cavity within it,  
a small loose stone, which rattles when it is shaken;  
and every fossil, with a nucleus in it, has obtained  
the name. The sort of analogy that was supposed  
to be between a stone, thus containing another  
within it, or, as the fanciful writers express it, pregnant  
with another, and a woman big with child, led  
people to imagine that it must have great virtues  
and effects in accelerating or retarding delivery; so  
that, if tied to the arm of a woman with child, it  
prevents abortion; and if to the leg, it promotes delivery.  
It is pretended, that the eagles seek for  
these stones to lay in their nests, and that they cannot  
hatch their young without. On such tale and  
imaginary virtues was raised all the credit which  
this famous fossil possessed for many ages.—*Sir J. Hill, History of the Materia Medica.*

#### Eaglet. s. Young eagle.

This treason of his sons did the king express in an  
emblem, wherein was an eagle with three eaglets

of a concretion of the oily particles into a resin in  
the centre of the trunk: it is brought on by some  
disease, and in the time of the dry dies of it. Of all per-  
fumes it is the most grateful to the oriental nations.  
It is used against vertigo and paralysis.—*Lindley, Vegetable Kingdom, Fabacea.*

Mark what Jacob did.  
When Laban and himself were compromised,  
That all the earings which were streaked and pied  
Should fall as Jacob's hire; the ewes, being rank,  
In end of autumn turned to the rams;  
And when the work of generation was at end,  
The skillful shepherd pecked me certain wands,  
And, in the doing of the deed of kind,  
He stuck them up before the fubious ewes,  
Who, then conceiving, did in earing time  
Fall particoloured lambs, and these were Jacob's.

*Shakespeare, Merchant of Venice, i. 2.*

##### 2. Delicacy of sense in music; power of judging of harmony; musical ear, good ear for music, or simply good ear.

She has a delicate ear, and her voice is music.—*Richardson.*

The faculty by which the relations of sounds are  
apprehended is a musical ear in the largest acceptation  
of the term. In this signification the faculty is  
nearly universal among men; for all persons have  
musical ears sufficiently delicate to understand and  
to imitate the modulations corresponding to various  
emotions in speaking; which modulations depend  
upon the succession of acuter and graver tones.  
These are the relations now spoken of, and these are  
plainly perceived by persons who have very im-  
perfect musical ears, according to the common use of  
the phrase.—*Whitall, Noctua Organum rearsatum.*

##### 3. Prominence raised on a larger body for the sake of holding it.

#### Earache. s. See extract.

Earache is most frequently symptomatic of in-  
flammation of the ear, or of the presence of foreign  
bodies, or of insects in the meatus, or of some affec-  
tion within the head, or in the vicinity of the ear;  
and is occasionally consequent upon small-pox,  
scarlet fever, and erysipelas of the adjoining parts.  
More rarely it is idiopathic, or a purely nervous  
affection. The pain in this form is often very severe;  
does not gradually increase, in severity, but is sud-  
den, and occurs in paroxysms; it is neither attended  
with throbbing, nor fever, and is more or less ir-  
regular or intermittent. . . . The causes of earache are  
those of all other nervous affections. It is more  
common in females, in whom it is often connected  
with uterine derangement or with pregnancy. It is  
also often symptomatic of disorders of the prima  
via; or is associated with rheumatism and neuralgia;  
and is very commonly caused by currents of cold  
air, and the irritation of earwax or otherwise dis-  
eased teeth or gums.—*Copland, Dictionary of Practical Medicine.*

#### Earal. adj. Relating to, or constituted by, the ear; aural, auricular. *Barbarous.*

verbal, or worded men, that speak more than they  
really intend. *Hicet, Sermons, p. 51: 1628.*

#### Eardrum. s. Membrane so called, stretched across the ear like the parchment of a drum so as to receive the vibrations of the air when thrown into the state that produces sound; drum of the ear; in more technical language, Tympanum.

Valvula discovered some passages in the rim of  
the ear-drum; of mighty use, among others, to  
make discharges of bruises.—*Isidore, Physico-  
Theology.*

The tympanic adjunct to the organ of hearing  
makes its first appearance, simultaneously with the  
development of eyelids and lacrymal organs, in the  
batrachia, which have quitted their aquatic for an  
aerial existence. Beyond the vestibular foramen is  
continued a short but wide passage outward, or

'meatus' closed from the external air by a thin transparent vibratile membrane—the 'tympanum' or *ear-drum*. From the girdle plate closing the vestibular foramen a slender bony style is continued across the 'tympanic cavity' to a drum, to which it is attached by a capillary or spatulate cartilage, in which a small muscle is inserted. A wide vertical passage from the tympanic cavity to the nares preserves the equilibrium between the air in that cavity and the atmosphere outside; it is called 'eustachian tube.' This tube will be found to bear relation to the size and exposed condition of the *ear-drum*, and perhaps, also, to its form, which, in the frog and other air-breathing ovipara, is convex externally. . . . The *ear-drum* . . . is less conspicuous externally in all lands than in frogs: a small muscle acts on the cartilage connected with the *ear-drum*, and a second longer muscle is attached to the discoid piece closing the vestibular orifice. . . . All serpents have the internal organ of hearing, similar in the main to the above: the base of the stapes closing the foramen vestibuli, is connected, in most serpents, by a long slender bony style, through the medium of cartilage and ligamentous fibres to the skin, which shows no sign of *ear-drum* or external meatus. No air is admitted by an eustachian canal to the cellular substance traversed by the tympanic ossicle; and of this there is no trace in Tythlops and Rhinophis. In lacertians, the modification of part of the integument for the special reception of sonorous vibrations is resumed. In the lacertina, the *ear-drum* is partially protected by its oblique position and by a ridge or fold of the skin at the back part of its circumference. . . . In the chelonians the *ear-drum* is again masked by unmodified integument; in the turtle it is covered by the second scale counting upward from the articulation of the lower jaw. The membrane tympani is, however, distinctly formed, thicker and more opaque than in lachnids or the main, and convex outwardly. —*Owen, Anatomy of Vertebrates.*

**Earing.** verbal *abs.* Ploughing.

**Earing.** verbal *abs.* Coming into ear as corn.

There is yet a third [act] required for the earing and hardening of the corn.—*Hammond*, iv. 530. (Rich.)

**Earl.** s. [A.S. *eorl*.] Title of nobility: (in England denoting a rank between that of *marquis* and *viscount*).

Thanes and kinsmen,  
Henceforth be earls, the first that ever Scotland  
For such an honour nam'd.

*Shakespeare, Macbeth*, v. 7.  
Next to these spiritual lords are the earls and barons, or lay peerage of England. The former dignity was perhaps not so merely official as in the Saxon times, although the *earl* was entitled to the third penny of all emoluments arising from the administration of justice in the county-courts, and might, perhaps, command the militia of his county, if it was called forth. Every *earl* was also a baron, and held an honour or barony of the crown, for which he paid a higher relief than an ordinary baron, probably on account of the profits of his judicial office. I will not pretend to say whether titular earldoms, absolutely distinct from the lieutenancy of a county, were as ancient as the conquest, which Madox seems to think, or were considered as irregular so late as Henry II., according to Lord Lyttelton. In *Inquiescence* of Baronage, I find none of this description in the first Norman reigns, for even that of Clare was connected with the local earldom of Hereford.—*Hallam, View of the State of Europe during the middle Ages*, ch. viii. pt. 3.

The word *earl* (*eorl*) meant originally a man of noble birth, as opposed to the *ceorl*. It was not a title of office till the eleventh century, when it was used as synonymous to alderman, for a governor of a county or province. After the conquest, it superseded altogether the ancient title.—*Ibid.* ch. viii. pt. 3, note.

**Earl-marshal.** s. One who has chief care of military solemnities.

The marching troops through Athens take their way.

The great *earl-marshal* orders their array. *Dryden*.

**Earldom.** s. Sciguity; title and dignity of an earl.

The duke of Clarence having married the heir of the earl of Ulster, and by her having all the earldoms of Ulster, carefully went about the redressing evils.—*Spenser, View of the State of Ireland*.

Another director of the White party was Charles Montague. He was often when he had risen to power, honours, and riches, called an upstart by those who envied his success. That they should have called him so may seem strange; for few of the statesmen of his time could show such a pedigree as his. He sprang from a family as old as the Conquest: he was in the succession to an *earldom*; and he was, by the paternal side, cousin of three earls. But he was the younger son of a younger brother.—*Mac. lay, History of England*, ch. xx.

**Earless.** adj. Wanting, or deprived of, ears.

Rovers on high stood unabash'd Defies,  
And Tutelin flagrant from the scourge below. *Pope*

The windows of bright heav'n opened lay. *Spenser*.

From the river winding clearly  
Down to towered Camelot.

Not the world's mass of vanity could make me.

*Shakespeare, Othello*, iv. 2.

**Earnest.** s. [from N.Fr. *ernes*; Lat. *arrha*.] Money, or some token, given in hand to assure a bargain; pledge; handsel; first fruits; token of something of the same kind in futurity.

Earths are opaque, insipid, and, when dried, friable, or consisting of parts easy to separate, and soluble in water; not disposed to burn, flame, or take fire.—*Woodward.*

*b. In the newer sense.*  
Modern science has demonstrated that the substances called primitive earths, and which, prior to the great electro-chemical career of Sir H. Davy, were deemed to be elementary matter, are all compounds of certain metallic bases and oxygen, with the exception of silica, whose base, silicon being analogous to boron, has led that compound to be regarded as an acid; a title characteristic of the part it extensively performs in neutralizing alkaline bodies, in mineral nature, and in the processes of art. Four of the earths, when pure, possess decided alkaline properties, being more or less soluble in water, having (at least three of them) an acrid alkaline taste, changing the purple infusion of red cabbage to green, most readily saturating the acids, and affording thereby neutral-saline crystals. These four are barytes, strontia, lime (calcia), and magnesia. The earths proper are five in number; alumina, glucina, yttria, silicic acid, and thorina. These do not change the colour of infusion of cabbage or tincture of litmus, do not readily neutralize acidity, and are quite insoluble in water. The alkalies are soluble in water even when carbonated; a property which distinguishes them from the alkaline earths.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

6. In Hunting. Foxhole: (hence, 'run to earth': 'earth-stopper').  
Hamilton fired five o'clock in the morning of the thirteenth of February for the dead. (BARRY'S  
(KARIV)

**Earthnut. s.** See extracts, in the first of which it is the English umbelliferous plant *Bunium flexuosum*; in the second, the African *Arachis hypogaea*.

Where there are *earthnuts* in several patches, though the roots lie deep in the ground, and the stalks be dead, the weeds will by their want root only where they grow.—*Ray.*

The *earthnut*, . . . a singular plant, has frequently been confounded with others. . . Its common appellation, the *earthnut*, has led to the conclusion that it was a species of *nut*, such as is known in England under the name of *pisgall*, *hucknut*, and *groundnut*. This, as well as the earth chestnut, belongs to totally different genera. On the continent, and in the East Indies, a similar confusion had long existed by the appellation of the ground pistachio, which caused the fruit to be confounded with the nut of the tree *Pistacia vera*. Some resemblance, on the other hand, existing between these—as well as from their being eaten by different nations . . . and also for producing oil—rendered the true description still more difficult. Botanists, however, are now no longer at a loss. The *Arachis* nut partakes of the nature of the pea or bean of our own country . . . originally from Africa. It has been naturalized in Europe, and, with the climate of the south of France, may be turned to good account. *Simmonds, Commercial Products of the Vegetable Kingdom.*

**Earthquake. s.** Tremor or convulsion of the earth.

This subterranean heat or fire being in any part of the earth stop, by some accidental rent or obstruction in the passages through which it used to ascend, and being preternaturally assembled in greater quantity into one place, causes a great rarefaction and intumescence of the water of the abyss, putting it into very great commotions; and making the like effort upon the earth, expanded upon the face of the abyss, occasions that agitation and concussion which we call an *earthquake*.—*Woodward, Essay towards a Natural History of the Earth.*

The country, by reason of its vast caverns and subterraneous fires, has been unwisely torn by earthquakes, so that the whole face of it is quite changed.—*Addison, Travels in Italy.*

**Earthwork. s.** In Fortification. Outposts made of earth: (opposed to stone).  
The white tower . . . is blocked up with a double line of earthworks pierced for guns.—*W. H. Russell, The Crimean War, ch. xxxii.*

**Earthworm. s.**  
1. Common red worm of the genus *Lumbricus*.

Worms are found in snow commonly, like *earthworms*, and therefore it is not unlike that it may likewise put forth plants.—*Bacon, Natural and Experimental History.*

The first [order of the annelids] . . . comprises the leeches, which are provided with a suckorial disc at each extremity of the body, and have neither bristles nor tuberculate feet. The second order . . . includes the *earthworms*; these have neither tubercular feet, nor external gills, nor suckers, but are provided with short stiff bristles fulfilling the function of feet, and which, in fact, are the rudiments of such. . . In some *earthworms* the skin is red, from the colour of its contained or subjacent circulating fluids; in leeches it is variegated by a layer of pigment-cells; in most annelids the epidermis reflects iridescent tints, and in such it is readily detached from the cutis.—*Owen, Lectures on Comparative Anatomy, lect. xi.*

2. Used metaphorically. Mean person.  
Thy vain contempt, dull *earthworm*, cease:  
I won't for refuge fly. *Norris.*

**Earthy. adj.** Consisting of, connected with, or partaking of the nature of, the earth.

Him lord pronounce'd, be, O indignity!  
Subjected to his service angel-wings,  
And flaming ministers to watch and tend  
Their *earthy* clumps. *Milton, Paradise Lost, ix. 151.*  
These lamps are inflamed by the admission of new air, when the apophyses are opened, as we see in fat *earthy* vapours of divers sorts. *Bishop Wilkins, Mathematical Magic.*

All water, especially that of rain, is more or less stored with matter, light in comparison of the common mineral *earthy* matter.—*Woodward, Essay towards a Natural History of the Earth.*

*b. As opposed to heavenly.*

I'll call up other gods of form more fair.

And in an *earthy*, the dark-dungeon thine. *Id.*

*c. As opposed to spiritual.* Gross.  
Teach me, dear creature, how to think and speak;  
Lay open to my *earthy* gross conceit,  
Smother'd in errors, feeble, shallow, weak,  
787

The folded meaning of your words' deceit.

*Shakespeare, Comedy of Errors, iii. 2.*

**Barwax.** *s.* Cerumen or exudation which smears the inside of the ear.

The ear being to stand open, because there was some danger that insects might creep in thereat; therefore hath nature oriented or plastered over the sides of the hole with *ceruæ*, to entangle insects.—*Ray, Wisdom of God manifested in the Works of the Creation.*

**Barwig.** *s.* [A.S. *wigga* = worm, grub, caterpillar; some provincial forms, as *arrowwig*, &c., as well as the shape of the insect, suggest a connection with *arrow*. The French *perce-oreille* favours the common view; though it is possible that these are two concurrent forms.] Sheath-winged insect, imagined to creep into the ear.

Himself be on an *earwig* set;  
Yet scarce he on his back could get,  
Scott and high he did envenom.—*Dryden, Nymphidia.*  
*Foreign and snails seldom infest timber.—Mortimer, Husbandry.*

Doll never flew to cut her lace,  
Or throw cold water in her face,  
Because she heard a sudden drum,  
Or found an *earwig* in a plum.

*Swift.*

**Barwig.** *v. n.* Talk over privately; influence by whispered and covert statements or insinuations.

He was so sure to be *earwigged* in private that what he heard or said openly went for little.—*Maryat, Novels.*

**Barwitness.** *s.* One who attests, or can attest, anything as heard by himself.

All present were made *earwitnesses*, even of each particular branch of a common indictment.—*Hooker, Ecclesiastical Polity.*

The histories of mankind, written by eye or *earwitnesses*, are built upon this principle.—*Watts, Logic.*

**Ease.** *s.* [Fr. *aise*.] Absence of exertion or effort.

1. Quiet; rest; tranquillity.

But then we should not find it half so brave,  
To lead it to the wars and to the seas;  
To make it suffer watchings, hunger, cold,  
When it might feed with plenty and with ease.  
*Sir J. Davis, On the Immortality of the Soul.*

2. Indulgence; (the following extract gives the rare form of the plural).

Is it a small crime to wound yourself by anguish of heart, to deprive yourself of all the pleasures, or ease, or enjoyments of life?—*Sir W. Temple.*

3. Relaxation.

(generally with the sense of *corroding* or

Real Presence of Christ in the Sacrament*, § 3.

The Harmerle, in the 'Arabian Nights,' who  
amused himself by setting down his guest to an  
imaginary feast, and trying his skill in imitating, at

The admission of a into the spelling of this

authorities, can only be defended on the  
principle of distinguishing it from *eve* =

pare also *eum* and *eme*.

by the human species daily:—If every secret-his-  
tory, every clouded-down conversation, how trivial  
matter, has an interest for us, then might the con-

nesty itself into *eavedropping*. —*Carlyle, Miscel-

Milton, *L'Allegro*.

**Ebony.** *s.* Valuable cabinet wood so called; tree (of the genus *Diospyros*) from which it is procured.

*Ebony* is the most important of the trees which they are in the habit of felling, as well as the one involving the greatest amount of labour, from the hardness and weight of the timber, which is so dense and heavy, that, to permit of their moving it at all, they are obliged to cut it into very short logs. The densely black portion, which is an article of commerce, occupies the centre of the tree; and in order to reach it, the whittier wood that surrounds it is carefully cut away. The Arabs were so well aware of this peculiarity in *ebony* that Albryount, in his treatise on India, calls it the 'black marrow of a tree, directed of its outer integuments.'—*Sir J. E. Tennant, Ceylon*, pt. ix. ch. v.

**Ebriety.** *s.* [Lat. *ebrietas*; from *ebrius* = drunken.] Drunkenness.

When Noah planted the vine, his son attended, and sacrificed a sheep, an ape, and a sow. These animals were to symbolize the gradations of *ebriety*.—*T. Warton, History of English Poetry*, lib. lvi. *Discretion on the Grains Romanorum*.

I conceived and drew up the plan of a work, a drama, which was to be, to my mind, what the *Faust* was to Goethe's. My *Faust* was old Michael Scott; a much better and more likely original than Faust. When aqua fortis, or spirit of vitriol, poured upon filings of iron, dissolves the filings with a great heat and *ebullition*, is not the heat and *ebullition* effected by a violent motion of the parts; and does not the motion argue, that the acid parts of the liquor rush towards the parts of the metal with violence, and run forcibly into its pores, till they met between its outmost particles and the main mass of the metal?—*Sir J. Newton*.

A violent cold, as well as heat, may be produced by this *ebullition*; for if acid ammoniac, or any pure volatile alkali, dissolved in water, be mixed with an acid, an *ebullition*, with a greater degree of cold, will ensue.—*Arbuthnot, On the Nature and Choice of Aliments*.

The remaining circumstances relied upon,—as his [Lord Chatham's] squandering away the ample legacy of Sir William Pymont, and his impetuous proceedings in carrying on improvements at his Kentish villa, with no regard to expense, and even little attention to the period of the day or night when he required the work to be done,—may all be well accounted for by the known ardour of his disposition; and are truly to be reckoned among the natural *ebullitions* of the same vehement disposition of purpose which, exerted upon greater things, formed the leading feature of his commanding character.—*Lord Brougham, Historical Sketches of Sir John of the Reign of George III.*, Lord Chas. Jm.

**Ecarts.** *s.* (pronounced as a word of three syllables.) [Fr.] Game at cards so called.

All eyes were on a very pretty woman, with fifteen thousand a-year, and only twenty-three. The duke of Shropshire wished he was discomfited. Such a player of *ecarts* might double her income.—*Diary of the younger, The young Duke*, b. ii. ch. iv.

**Eccentric.** *adj.* [Gr. *ek* = out, *kentron* = centre.]

1. Deviating from the centre; having a different centre from some other circle.

Whence is it that planets move all one and the same way in orbits concentric, while comets move all manner of ways in orbits very *eccentric*?—*Sir I. Newton, Opticks*.

In the history of astronomy, we find that the in-equable motions of the sun, moon, and planets were, in a great measure, reduced to rule and system by the Greeks, by the aid of an hypothesis of circles, revolving, and carrying in their motion other circles which also revolved. This hypothesis introduced many technical terms, as Deferent, Epicycle, *Eccentric*.—*Whewell, Novum Organum renovatum*, p. 203.

2. Not terminating in the same point; not directed by the same principle.

Whatever affairs pass such a man's hands, he crooketh them to his own ends; which must needs be often *eccentric* to the ends of his master.—*Bacon, Essays*.

3. Irregular; anomalous; deviating from stated and constant methods.

A character of an *eccentric* virtue, is the more exact image of human life, because it is not wholly exempted from its frailties.—*Dryden*.

Then from whatever we can to sense produce, Common and plain, or wondrous and abstruse, From nature's constant or *eccentric* laws, The thoughtful soul this general inference draws, That an effect must presuppose a cause. *Prior*.

**Eccentric.** *s.*

1. That which deviates from a centre.

Astronomers, to solve the phenomena, framed to the concept *eccentric* and epicycles and a wonderful engine of orbits.—*Johnson*. (Rich.)

Thither his course he bends Through the calm firmament; but up or down, By centrick or *eccentric*, hard to tell.

Milton, *Paradise Lost*, lib. 37.

They build, unbuilt, contrive, To save appearances: they pierce the sphere With centrick, and *eccentric*, scribbled o'er, Cycle, and epicycle, orb in orb. *Ibid.* viii. 81.

2. Deviation.

Let the lot decide the main of the controversy, and reserving somewhat for the publick, somewhat for the strangers, somewhat for common calamities, somewhat, as it were, for the universal motion of the whole body, somewhat for *eccentric*.—*Hammond*, iv. 351. (Rich.)

**Eccentricity.** *s.*

1. Deviation from a centre; state of having a different centre from another circle.

In regard of *eccentricity*, and the epicycle wherein it moveth, the motion of the moon is unequal.—*Sir T. Browne*.

By reason of the sun's *eccentricity* to the earth, and obliquity to the equator, he appears to us to move unequally.—*Holler*.

The *eccentricity* of the earth is the distance between the focus and the centre of the earth's elliptical orbit.—*Harris*.

Excursive and irregular deviation from usual custom.

The duke at his return from his *eccentricity*, for so I account favourites abroad, met no good news.—*Sir H. Wotton*.

3. Deviation from established methods; particularity; irregularity.

Akenside was a young man, warm with every notion that by nature or accident had been connected with the sound of liberty; and, by an *eccentricity* which such dispositions do not easily avoid, a lover of contradiction, and no friend to any thing established.—*Johnson, Life of Akenside*.

**Echymosis.** *s.* [Gr. *ekchymōsis*.] Livid spots or blotches in the skin, made by extravasated blood; bruise with suffusion of blood; black eye; medical term, having *Echymotic* and other derivatives.

*Echymosis* may be defined an extravasation of the blood in or under the skin, the skin remaining whole.—*Wiseman, Surgery*.

**Ecclesiast.** *adj.* Ecclesiastic. *Rare*.

Thus we see that all our *ecclesiast* and political choices may consent and sort as well together without any rupture of the state as the Christians and freholders.—*Milton, Of Reformation in England*, b. xi. (Rich.)

**Ecclesiastes.** *s.* [Gr.] One of the canonical books of Holy Scripture.

The book is in the Hebrew denominated *Coheleth*, a word which signifies one who speaks in public; and which, indeed, is properly translated by the Greek word *Ecclesiastes*, or, the Preacher. . . . The Hebrew word has, however, a feminine termination in respect to wisdom, personified, as it were, in Solomon.—*Dr. Gray, Key to the Old Testament*.

**Ecclesiastic.** *adj.* [Lat. *ecclesiasticus*.]

Relating to the church.

A church of England man has a true veneration for the scheme established among us of *ecclesiastick* government.—*Swift*.

**Ecclesiastic.** *s.* Person dedicated to the ministries of religion.

The ambition of the *ecclesiastick* destroyed the purity of the church.—*T. Burnet, Theory of the Church*.

**Ecclesiastical.** *adj.* Same as Ecclesiastic.

Is discipline an *ecclesiastical* matter or civil? If an *ecclesiastical*, it must belong to the duty of the minister.—*Hooker, Ecclesiastical Polity*.

Clergymen, otherwise little fond of obscure terms, yet in their sermons are liberal of those which they find in *ecclesiastical* writers.—*Swift*.

**Ecclesiasticalism.** *s.* Church principles.

My religious convictions and views have remained from any tincture of *ecclesiasticalism*.—*Westminster Review*, January, 1860, p. 24.

**Ecclesiastical.** *s.* [Latin, from Greek.]

One of the books which form the Apocrypha. See extract.

The book of *Ecclesiastical*, according to some writers, is so called, because the ancients divided the books of the Old Testament volume into four parts; the first contained the Pentateuch; the second, the Prophets; the third, the Hagiographa; the fourth, the *ecclesiastical* or apocryphal books, as not being in the Jewish canon. Among the *ecclesiastical* books, this of Jesus the son of Sirach being most remarkable and useful, it was called *Ecclesiastical*, whilst the rest of the same class have lost their name. According to others, this title was given by the Latins to it, to denote its use in the church, being read for the sake of edification in the public religious assemblies. Or, lastly, because, like Solomon's *Ecclesiastes*, which it resembles in name as well as matter, it teaches and instructs such as attend to it by the admirable precepts which it delivers.—*Arndt, Compendium of Ecclesiastical*, pref.

**Ecclesiologist.** *s.* [Gr. *λόγος* = word, principle.] This word, suggesting as its congeners *Eccelesiology* and *Eccelesiological*, is the title of a periodical upon church architecture, published in 1850, when it was considered to be a new word. Earlier examples, however, are probably to be found, as well as the use of *Eccelesiology* in a more general sense, viz. the doctrine, system, or philosophy of the government and authority of churches.

**Eccoprotic.** *adj.* (sometimes used as a substantive.) [Gr. *ek*, and *protrōgō*.] Acting as a medicine which purges so as to bring away no more than the natural excrements lodged in the intestines. *Obsolete*.

The body ought to be maintained in its daily excretions by such means as are *eccoprotic*.—*Hurvey, On the Mucous*.

**Echidna.** *s.* [Gr. *ἐχίδνα* = viper.] Monotrematous animal so called. See extract.

The third principal division of the *Echidnata* contains but two genera, belonging to the Australian range, and which have long excited the attention of zoologists: these are *Echidna* and *Ornithorhynchus*: the first resembling a hedgehog, with the muzzle of an ant-eater, without the slightest vestige of a tooth; and the latter a mole, with the bill of a duck. . . . The *Echidna*, or spiny ant-eater, are of two species. Their mouth, or muzzle, more resembles that of a bird than of a quadruped, unless, indeed, it be compared to that of the American ant-eater; its form is narrow and lengthened, terminating in a very small mouth, hardly more than sufficient to admit the passage of a slender extensible tongue, which the animal uses, like the ant-eater of America and India, to draw into its mouth the ants upon which it feeds. Although this mouth is destitute of teeth, the palate is furnished with several rows of small spines, directed backwards. Their feet are short, and are each furnished with five very strong and lengthened toes, admirably adapted for digging. The whole of the body is covered with short, acute, and rather strong spines, somewhat similar to those of the hedgehog; but in one species these spines are intermixed with a quantity of thick and soft fur, more resembling that of the Brazilian porcupine.—

*Scorpaena*, *Natural History and Classification of Quadrupeds*, §§ 230, 231.

**Echinated**, also **Echinate**. *adj.* In *Zoology* and *Botany*. Bristled like a hedgehog; set with prickles.

An *echinated* pyrites in shape approaches the *echinated* crystalline balls.—*Woodward, On Fossils*.

**Echinoderm**. *s.* [Gr. *ἐχίνος*, *ἐπίμαρ* = skin.] Animal of the order *Radiata*, chiefly represented by the sea-urchins so called.

(For examples see extract under *Echinodermata*.)

**Echinodermal**. *adj.* Relating to the *Echinodermata*.

(For example see extract under *Echinodermata*.)

**Echinodermata**. *s.* Class in *Zoology* so called, of which the sea-urchins are the typical representatives.

The soft and gelatinous radiaries have often baffled the anatomist by the seeming simplicity and uniformity of their texture; the harder, spine-clad, or *echinodermat* species, perplex the most patient and persevering dissector by the extreme complexity and diversity of their constituent parts. This class of animals... includes species in which the form is most strictly or typically radiate... With a radiated filamentary system of nerves is combined not only a distinct abdominal cavity with an alimentary canal suspended therein by a vascular mesentery, and having a distinct anal outlet, but there are distinct vascular and chylous systems together with a large and well-defined respiratory organ. This organ, however, may be regarded as the exceptional condition of the radiated type of structure, and is found only in the highest and aberrant forms of the present class, which indicate the transition from the *echinodermata* to the annelids... In the next order the angles disappear, and the disc expands until a spheroid or globular form is obtained, which characterizes the *echinodermata* commonly called 'sea-urchins,' and known by the Greeks... These various *echinodermata* (holothurioides) seem to lead, by the concluding order *Sipunculoidea*, to the true worms, which stand on the lowest step of the articulate division of the animal kingdom. The name *echinodermata* has been applied to these diversified forms of the higher organized zoophytes of Cuvier, because in many of the species the integument is defended by spines; they, however, possess, and are associated together by another and more general tegumentary character, the skin is perforated in most of the species by minute foramina, through which a multitude of small tubes or hollow setaceous tentacles (tube-feet) can be protruded and retracted, and these constitute the common organs of adhesion and locomotion in the *echinodermata*.—*Owen, Lectures on Comparative Anatomy*, lect. 2.

**Echinus**. *s.*  
1. Radiated animal so called; sea-urchin; sea-hedgehog.

The calcareous pieces entering into the composition of the complex skeleton of the *echinus* are those of the shell, of the buccal apparatus called the 'larnax,' of the ambulacral tubes, and of the pedicellariæ. All the *echinus* are admirable for the regular and beautiful pattern in which, as in a tessellated pavement, the numerous calcareous pieces composing their globular crust are arranged; many of the species are formidable from the size and form of the spines with which the shell is beset. The component plates of the shell are divided into several series, called oral, anal, genital, ocular, ambulacral, and interambulacral plates. The proper shell is built up of the two latter kinds, which constitute a hollow spheroid, having a large aperture at each pole, where the first four kinds of plates are situated. The ambulacral plates are perforated for the passage of the tubular feet, the parallel rows of which intercept and overarch the spaces compared by Linnaeus to avenues or ambulacra; these plates likewise support spines. The interambulacral plates, which support a greater number of the spines, are characterized by more numerous tubercles, and are not perforated. Both kinds of plates are of a pentagonal form, and are arranged each kind in five alternate pairs of vertical rows. The plates of each pair are united together by a strong suture, and increase in size as they approach the equator of their living globe. These twenty series of ambulacral and interambulacral plates constitute the chief part of the spheroidal skeleton of the *echinus*.—*Owen, Lectures on Comparative Anatomy*, lect. 2.

2. In *Architecture*. Member or ornament taking its name from the roughness of the carving, resembling the prickly rind of a chestnut, and not unlike the thorny coat of a hedgehog.

The *echinus* is used by modern architects in cornices of the Ionic, Corinthian, and Composite orders; and generally set next to the abacus, being carved with anchors, darts, and ovals, or eggs.—*Harrie*.

**Echo**. *s.* [Gr. *ἠχώ*; Lat. *echo*.—Echo was supposed to have been once a nymph, who pined into a sound for love of Narcissus.] Return, or repercussion, of any sound; sound returned.

The pleasant myrtle may teach the unfortunate *echo* in these woods to round the renowned name of a goddess.—*Sir P. Sidney*.

The sound, filling great spaces in arched lines, cannot be guided; therefore there hath not been any means to make artificial echoes.—*Bacon, Natural and Experimental History*.

Babbling *echo* mocks the hounds, Replying shrilly to the well-tun'd horns, As if a double hunt were heard at once.

*Shakespeare, Titus Andronicus*, ii. 3.

Thy hounds shall make the welkin answer them, And fetch shrill echoes from their hollow earth.

*Id., Taming of the Shrew*, induct. sc. 2.

To you I mourn, nor to the deaf I sing; The woods shall answer, and the echo ring.

*Id., Echo*. v. 2. Resound; give the repercussion of a voice.

All the church *echo'd* As the paring *Shakespeare, Taming of the Shrew*, iii. 2.

**Echo**. v. 2. Send back a voice; return what has been uttered.

Our separatists do but *echo* the same note.—*Dr. H. More, Decay of Christian Piety*.

With peals of shouts the Tyrians praise the song; Those peals are *echo'd* by the Trojan throng.

*Dryden, Translation of the Æneid*.

**Echoed**. *part. adj.* Returned as an echo.

One great death deforms the dreary ground; The *echo'd* woe from distant rocks resound. *Prior*.

**Echoer**. *s.* One who echoes.

Those servile *echoers* of aught but truth, *Machins, Pursuits of Literature*.

**Echoing**. *part. adj.* Sounding as an echo.

Through rocks and caves the name of Della sounds;

Della each cave and *echoing* rock rebounds. *Pope*.

The cock's shrill claxon, or the *echoing* horn, No more shall rouse them from their lowly bed.

*Gray, Elegy*.

**Eclaircissement**. *s.* [Fr.] Explanation.

Well, then, by the world, a man can't speak civilly to a woman now, but presently she says, he makes love to her. Nay, madam, you shall say, with your pardon, since you have not yet understood him, till he has made an *éclaircissement* of his love to you.—*W. Sherry, The Country Wife*.

**Eclat**. *s.* [Fr.] Splendour; show; lustre.

Nothing more contributes to the variety, surprise, and *eclat* of Homer's battles, than that artificial manner of piling his heroes by each other.—*Pope, Essay on Homer*.

All people's eyes and inclinations began now to turn towards Cæsar, who, by the *eclat* of his victories, seemed to rival the fame of Pompey himself.

—*Middleton, Life of Cæsar*. (Ord M.)

**Eclat**. *adj.* [Gr. *ἐκλεκτικός* = selecting, showing selection, or resulting from it; *ἐκ* = out, *λέγω* = choose.—see *Elect*.] Selecting; choosing at will.

Cicero gives an account of the opinions of philosophers; but was of the *eclat* sect, and chose out of each such positions as came nearest truth.—*Watts, Improvement of the Mind*.

(For further examples see under next entry.)

**Eclat**. *s.* Selector: (with its chief special applications to certain philosophers, who, without attaching themselves to any particular sect, took from any what they judged good; to a sect in the Christian church, called also modern Platonists, as considering the doctrine of Plato conformable to the spirit and genius of the Christian; to a sect of physicians among the ancients).

He [Pericles] sticks to his own philosophy; he shifts not sides like Horace, who is sometimes Epicurean, sometimes Stoic, sometimes *Eclat*, as the present humour leads him.—*Dryden, Origin and Progress of Satire*.

But we need not struggle farther, wringing a significance out of these mysterious words; in delineating the genuine transcendentalist, or 'philosopher of the third stage,' properly speaking the philosopher. Norvalis ascends into regions whither few readers would follow him. It may be observed here that British philosophy, tracing it from Duns Scotus to Dupond Stewart, has now gone through the first and second of these stages, the scholastic and the *eclat*, and is in considerable honour. With our amiable Professor Stewart, than whom no man, not Cicero himself, has ever more entirely *eclat*, that second or *eclat* class may be considered as having

terminated; and now philosophy is at a standstill, or, rather there is now no philosophy visible in these islands. It remains to be seen whether we also are to have our 'third stage,' and how that new and highest 'class' will demean itself here. The French philosophers seem busy studying Kant, and writing of him; but we imagine Norvalis would pronounce them still only in the *eclat* stage. He says afterwards that all *eclat* are essentially and at bottom sceptics; the more comprehensive, the more sceptical.—*Carlyle, Critical and Miscellaneous Essays, Novalis*.

**Eclat**. *s.* Tendency to become eclectic.

But there is also an injurious mental habit, and a hazard of ulterior evils, connected with that sort of *eclat*, which a system of indiscriminate aid to different religious communions presupposes. It seems to imply, and at least it proposes us to believe, that the power of a revealed truth is in the abstract form of its propositions, just as, when we have accurately stated a formula of mathematics, we know that we virtually possess all its results; and as, when we reduce it to a narrower expression, we are still aware what classes of results we exclude, and how much we retain.—*Glendon, The State in its Relations with the Church*, ch. ii.

**Eclat**. *s.* [Gr. *ἐκλεγμα*, from *λέγω* = lick.]

Form of medicine made by the incorporation of oils with syrups, and which is to be taken upon a liquorice stick. *Obsolete*.

Confection, treacle, multiviride, *eclat*, or tincture.—*Burton, Anatomy of Melancholy*.

**Eclipse**. *s.* [Gr. *ἐκλείψω* = failing; from *λείπω* = leave, fail, full short of.]

1. Obscuration of the luminaries of heaven: (as that of the *sun* by the intervention of the moon, or of the *moon* by the interposition of the earth).

Silver'd in the moon's *eclipse*.

*Shakespeare, Macbeth*, iv. 1.

Planets, planet-struck, and *eclipse* Then suffer'd.—*Milton, Paradise Lost*, x. 913.

So, though the sun victorious be, And from a dark *eclipse* set free,

The influence, which we fondly fear, Afflicts our thoughts the following year.

*Watts*.

An *eclipse* of the moon is when the atmosphere of the earth, being between the sun and the moon, hinders the light of the sun from falling upon and being reflected by the moon: if the light of the sun is kept off from the whole body of the moon, it is a total *eclipse*; if from a part only, it is a partial one.—*Locke*.

2. Darkness; obscuration.

All the posterity of our first parents suffered a perpetual *eclipse* of spiritual life.—*Sir W. Mallock, History of the World*.

**Eclipse**. v. 2.

1. Darken a luminary.

Now if the earth were flat, the darken'd moon Would seem to all *eclips'd* as well as one.

*Cæsar, Manilius*.

2. Extinguish; put out.

Then here I take my leave of thee, fair son, Born to *eclipse* thy life this afternoon.

*Shakespeare, Henry VI. Part I. iv. 2.*

3. Cloud; obscure.

They had seen tokens of more than common error, howsoever now *eclips'd* with fortune.—*Sir J. Sidney*.

Let other mages write his prosperous fate, Of conquer'd nations tell, and kings restored: But mine shall sing of his *eclipse'd* estate,

Which, like the sun's, more wonders does afford.

*Dryden*.

He descended from his father, and *eclips'd* the glory of his divine majesty with a veil of flesh.

*Calaneo, Sermons*.

4. Disgrace.

She told the king, that her husband was *eclips'd* in Ireland by the no-countenance his majesty had showed towards him.—*Lord Clarendon, History of the Grand Rebellion*.

Another now hath to himself engross'd All power, and us *eclips'd*.

*Milton, Paradise Lost*, v. 775.

**Eclipse**. v. 2. ? Become dim (as the night does after looking at the sun). *Rare*.

Starry eyes, whereto my sight Did *eclipse* with much delight, Eyes that lighten, and do shine, Beams of love that are divine.

*R. Greene, Poems*.

**Eclipse**. *s.* See extracts.

All stars, that have their distance from the *eclipse* tick northwards not more than twenty-three degrees, and a half, may, in progression of time, have declination southward, and move beyond the equator.—*Sir T. Brereton, Vulgar Errors*, iv. 13.

The torriduous globe had the same size and position, in respect of the sun, that it now hath; its axis was not parallel to that of the *eclipse*, but in-

ellined in like manner as it is at present.—Woodward, *Essay towards a Natural History of the Earth*.

You must conceive an imaginary plane, which passing through the center of the sun, and the earth, extends itself on all sides as far as the firmament: this plane is called the *celiptick*, and in this the center of the earth is perpetually carried, without any deviation.—*Deville, Sermon*.

A great circle of the sphere, supposed to be drawn through the middle of the zodiac, and making an angle with the equinoctial, in the points of Aries and Libra, of 23° 30', which is the sun's greatest declination. This is by some called *via solis*, or the way of the sun, because the sun, in his annual motion, never deviates from this line. It is this line which is drawn on the globe, and not the zodiac. But in the new astronomy the *celiptick* is that path among the fixed stars, which the earth appears to describe to an eye placed in the sun, as in its annual motion it runs round the sun from west to east. If you suppose this circle to be divided into twelve equal parts, they will be the twelve signs, each of which is denoted or distinguished by some asterism or constellation.—*Harris*.

**Used adjectively.**

The earth's rotation makes the night and day;  
The sun revolving through the *celiptick* way,  
Effects the various seasons of the year.

*Sir R. Blackmore, Creation.*

**Eclogue.** *s.* [Lat. *ecloga*, title equivalent to Bucolic or Pastoral in Virgil; a word of doubtful origin, and, as being a term applied to certain poems rather than to a general class, a proper rather than a common name.] Bucolic poem; bucolic; idyl; pastoral poem; pastoral.

What exulting praises Basil... the *eclogue* any man may guess, that knows how is better than spectacles to make every thing seem great.—*Sir P. Sidney*.

It is not sufficient that the sentences be brief, the whole *eclogue* should be so too.—*Pope*.

**Economie.** *adj.* Pertaining to the regulation of a household.

Her quickening power in every living part,  
Both as a nurse, or as a mother serve;  
And doth employ her *economic* art,  
And luscious care her household to preserve.

*Sir J. Denck, On the Immortality of the Soul.*

**Economical.** *adj.*

1. Same as Economic. *Rare*.

In *economical* affairs, having proposed the government of a family, we consider the proper means to effect it. *Watts*.

2. Frugal: (this being the *commoner* meaning, indeed the only one in which the word is, at present, in ordinary use. In few words is the difference between the form in *-ic* and the form in *-ical* more clearly marked than in this. *Economic*—frugal, is nearly as rare as *Economical*—pertaining to the regulation of a household; *Political* and *Political* give a like amount of difference).

Some are so plainly *economical*, as even to desire that the seat be well watered, and well fuelled.—*Sir H. Woot, on Elements of Architecture*.

3. Regulative.

Part of the power given unto Christ as man being merely *economical*, shewing at a certain end, shall then cease and terminate when that end for which 'twas given shall be accomplished.—*Grege, Cosmogony Sacred*, 152. (Ord M.S.)

**Economics.** *s.* Doctrine of economy. See Chromatics.

A prince leaving his business wholly to his ministers, is as dangerous an error in politics, as a master's committing all to his servants is in *economics*.—*Sir R. L'Estrange*.

**Economist.** *s.* Manager, generally of a saving character.

After which, by the addition of a few years, and a superior understanding, she became, and continued all her life, a most prudent *economist*.—*Swift, Character of Stella*. (Ord M.S.)

Very few people are good *economists* of their fortune, and still fewer of their time; and yet, of the two, the latter is the most precious.—*Lord Chesterfield, Letters*, let. 516. (Ord M.S.)  
He was ostentatious, haughty and bold, squandered and threw away, without prising the economist or censuring the spendthrift.—*Johnson*.

**Economization.** *s.* Result of the practice of economy.

Though the loss of heat does not therefore increase only as the square of the dimensions, it certainly increases at a smaller rate than the cubes. And to the extent that augmentation of mass results in a

greater retention of heat, it effects an *economization* of force. This advantage is not, however, so important as at first appears.—*Herbert Spencer, Inductions of Biology*.

**Economize.** *v. n.* Act, live, or manage with economy.

It was too late to *economize*, even if the necessity of doing so had become evident.—*Emilia Wyndham*.

**Economize.** *v. a.* Save; husband; make the most of.

In order to *economize* time and facilitate labour, care is taken to associate on one side of the motive machine the hammer, the anvil, and the reducing cylinders; and on the other side to place the several systems of cylinders for drawing out the iron into bars.—*Err, Dictionary of Arts, Manufactures, and Mines, Iron*.

**Economy.** *s.* [Gr. *oikonomia*, from *oikos* = house, family, &c., and *nomos* = law, distribution, regulation. The use of the *e* instead of *o*, which in the present spelling of this word is nearly universal, is no innovation, but an orthography recognized by Johnson himself, who writes: 'This word is written from its derivation *economy*, but *o* being no diphthong in English, it is placed here' (i.e. under E) 'with the authorities for different orthography.']

1. Management of a family; government of a household.

By St. Paul's *economy* the heir differs nothing from a servant, while he is in his minority; so a servant should differ nothing from a child in the substantial part.—*Jeremy Taylor, Rule and Exercises of Holy Living*.

2. Frugality; discretion of expense; laudable parsimony.

Particular sums are not laid out to the greatest advantage: in his *economy*, but are sometimes suffered to run waste, while he is only careful of the main. *Dryden, State of Innocence*, prologue.

I have no other notion of *economy*, than that it is the parent of liberty and ease.—*Swift, Letter to Lord Bolingbroke*.

3. Disposition of things; regulation.

All the divine and infinitely wise ways of *economy* that God could use towards a rational creature, oblige mankind to that course of living which is most agreeable to our nature.—*Hammond*.

Applied to literary compositions.

In the Greek poets, as also in Plautus, we shall see the *economy* and disposition of poems better observed than in Terence.—*B. Jonson, Discourses*.

If this *economy* must be observed in the minutest parts of an epic poem, what soul, though sent into the world with great advantages of nature, cultivated with the liberal arts and sciences, can be sufficient to inform the body of so great a work?—*Dryden, Induction to Virgil's Æneid*.

4. System of motions; distribution of everything active or passive to its proper place; principle of regulation in any establishment or system, as in political and domestic economy.

These the strainers add,  
That, by a constant separation made,  
They may a due *economy* maintain,  
Exclude the noxious parts, the good retain.  
*Sir R. Blackmore, Creation*.

5. Principle.

But Eutyches did not merely insist upon a phrase; he appealed for his doctrine to the Fathers generally. 'I have read the blessed Cyril, and the holy Fathers, and the holy Athanasius; he says at Constantinople, "that they said, "Of two natures before the union," but that "after the union" they said "but one." It is also undeniable that, though the word "nature" is applied to our Lord's manhood by St. Ambrose, St. Gregory Nazianzen, and others, yet on the whole it is for whatever reason avoided by the previous Fathers; certainly by St. Athanasius, who uses the words "manhood," "flesh," "the man," "economy," where a later writer would have used "nature;" and the same is true of St. Hilary. In like manner, the Athanasian Creed, written, as it is supposed, some twenty years before the date of Eutyches, does not contain the word "nature." Much might be said on the plausibility of the defence, which Eutyches might have made for his doctrine from the history and documents of the Church before his time.—*Newman, Development of Christian Doctrine*, ch. v. sect. 2.

**Ephrastic.** *adj.* [Gr. *εφραστειν* = defensive; from *εφάπνο* or *εφάρτω* = ward off.] In *Medicine*. Having the power to repel, or ward off. *Rare*, Prophylactic being the *commoner* word.

Procure the blood a free course, ventilation, and

transpiration, by suitable purges and *ephrastic* medicines.—*Harsper*.

**Ecstasis.** *s.* [Latin from Greek.] Same as Ecstasy, only less English.

Let all this be a transportation and *ecstasis*.—*Gregorie, Posthumus*. (Ord M.S.)

**Ecstasy.** *s.* [Gr. *εκστασις*; from *εκ* = out, and *στασις* = standing, state, condition.]

1. Any passion by which the thoughts are absorbed, and in which the mind is for a time lost.

Follow them swiftly,  
And hinder them from what this *ecstasy*  
May now provoke them to.

*Shakespeare, Tempest*, iii. 3.  
Whether what we call *ecstasy* be not dreaming with our eyes open, I leave to be examined.—*Locke*.

2. Excessive joy; rapture.

O, love, be moderate! Alas, thy *ecstasy*!  
*Shakespeare, Merchant of Venice*, iii. 2.  
The religious pleasure of a well disposed mind moves gently, and therefore constantly; it does not affect by rapture and *ecstasy*; but in like the pleasure of health, still and sober.—*South, Sermons*.  
Each delighted, and delighting, gives  
The pleasing *ecstasy* which each receives. *Prior*.  
A pleasure, which no language can express:  
An *ecstasy*, that mothers only feel,  
Plays round my heart. *Philips, Distress Mother*.

3. Enthusiasm; excessive elevation of the mind.

He lov'd me well, and oft would beg me sing:  
Which when I did, he on the tender grass  
Would sit, and hearken even to *ecstasy*.  
*Milton, Comus*, 623.

4. Excessive grief or anxiety.

Sighs and groans, and shrieks that rend the air,  
Are made, not mark'd; where violent sorrows seem  
A modern *ecstasy*. *Shakespeare, Macbeth*, iv. 3.

5. In *Medicine*. Trance.

Catalepsy and *ecstasy*, although treated of by some writers as distinct affections, generally present very nearly the same pathological conditions, morbid relations, and complications, for which reasons I shall consider them... as varieties of the same species of disease.—*Copland, Dictionary of Practical Medicine*, Catalepsy.

**Ecstasy.** *v. a.* Fill with rapture or enthusiasm. *Rare*.

The complex ideas of substances are *ectypes*, copies, but not perfect ones; not adequate.—*Locke*.

**Ecumenic.** *adj.* [Gr. *οικουμενικος*, relating to the *oikoumenē*; this being the passive participle, in the feminine gender (the word *γῆ* = earth being understood), of *οικισ* = inhabit.] Respecting, relating to, or representing, the whole inhabited world; universal: (its chief special application being in *Theology*, to councils of a certain amount of generality).

Let... the suppression of heresy be the first paramount absorbing subject of debate. All precedent was in the Pope's favour; it had ever been the first act of *ecumenic* councils, from that of Nicea, to

guard the faith and to condemn heresy. So, too, the Council of Constance, commencing at this point, might be held a continuation, hardly more than a prorogation, of the Council of Pisa. And this to the Pope was life or death. For if the Council of Pisa was thus even tacitly recognized, his title among the three claimants to the Papacy, his absolute title, resting on the solemn decree of that council, was irretrievable.—*Milman, History of Latin Christianity*, b. xiii. ch. vii.

**Ecumenical, adj.** Same as Ecumenic.

Thus they were properly placed, as executive officers, under the control both of the legislature, on the part of the State; and of Scripture, of the ecclesiastical decrees, and of the national clergy, on the part of the Church; the clergy forming the ordinary tribunal to judge of heresy upon any questions which might arise within the kingdom; and the decrees of the councils being those common laws of Christendom, which it is the function of Catholic consent to recognize.—*Gladstone, The State in its Relations with the Church*, ch. vii.

Eutyches was supported by the Imperial Court, and by Dioscorus the Patriarch of Constantinople; the proceedings therefore at Constantinople were not allowed to settle the question. A general council was summoned for the ensuing summer at Ephesus, where the third ecumenical council had been held twenty years before against Nestorius. It was attended by sixty metropolitans, ten from each of the great divisions of the East; the whole number of bishops assembled amounted to one hundred and thirty-five. Dioscorus was appointed President by the Emperor, and the object of the assembly was said to be the settlement of a question of faith which had arisen between Flavian and Eutyches.—*Newman, Development of Christian Doctrine*, ch. v. sect. 3.

**Edacity, s.** [Fr. *édacité*; Lat. *edacitas*, -*atis*, from *edo*=eat.] Tendency to eat largely; habit of eating largely; gluttony; voracity; ravenousness; greediness; rapacity.

In lopping and felling, save *edder* and stake, Thine hedges, as needeth, to mend or to make.

*Tusser, Hundred Points of Good Husbandry.*

**Eddish, s.** See extract.

Commonly explained in the sense of aftermath, which gives too confined a signification. The meaning is pasture or the edible growth of either grass or cornfield, and the word is probably a corruption of *edage*, as *rubbish of rubbish*.

Keep for stock is tolerably plentiful, and the fine spring weather will soon create a good *eddish* in the pastures.—(Times, April 20, 1857.)

That after the flax is pulled you get more feed that autumn than from the aftermath of seeds sown with wheat the second year; that the immense *edage* obtained from weeds the same year they are sown and after the flax is pulled, should be added to the value of the flax.—(Kewcott, Feb. 1, 1852.)—*Woodward, Dictionary of English Etymology*.

**Eddy, s.** [see last extract.] Whirlpool; circular motion in water (or air).

My prides are as a bulrush upon a stream: if they sink not, 'tis because they are born up by the strength of the current, which supports their lightness; but they are carried round again, and return on the *eddy* where they first began.—*Dryden*.

The wild waves madder'd him, and suck'd him in, And smiling *eddies* dimpled on the main.—*Id.*

So, where our wide Numidian wastes extend, Sudden th' impetuous hurricanes descend, Wheel through the air, in circling *eddies* play, Tear up the sands, and sweep whole plains away.

*Addison, Cato.*

Used either *adjectivally*, or as the *first element* in a compound.

And chaff with *eddy* winds is whirl'd around, And dancing leaves are lifted from the ground.—*Dryden*.

[**Eddy**—Commonly referred to an Anglo-Saxon *ed-eat*, back-water (not preserved in the extant remains of the language), from *ed*, equivalent to the Latin *re* in composition, and *eo*, water. But this plausible derivation is opposed by numerous Norse forms given by Asen, *ed, ida, edo, uide, edja, bik-ida, bik-oudu, bring-sanda*, an eddy, back-water, which leave little doubt that the word is simply the Old Norse *eda*, a whirlpool, from *gida*, to boll, to rush; Anglo-Saxon *gih*, wave, flood, rush of water; *ghian*, to fluctuate, to overflow.—*Wedgwood, Dictionary of English Etymology*.]

**Eddy, v. n.** Whirl as an eddy.

No doubt preaching, in the proper sense of the word, is more effective than reading. . . . But . . . I prefer going to church to a pastor who reads his discourse: for I never yet heard more than one preacher without book, who did not forget his argument in three minutes' time; and fall into vague and unprofitable declamation, and, generally, very coarse declamation too. These preachers never progress; they *eddy* round and round. Multitude of mind follows their ministry.—*Cideridge, Table Talk*.

**Edema, s.** [Gr. *oîma*=swelling.—scarcely naturalized; indeed, often combined as a generic term with another Latin word indicative of the specific character of the ailment to which it applies, e.g. *edema nodosum*. Few words beginning with *e* are so rarely spelt as here, i.e. with *e*. The derivatives, however, are truly Anglicized.] In Medicine. Swelling.

**Edematous, adj.** Same as edematous. *Rare*.

It is primarily generated out of the effusion of melancholic blood, or secondarily out of the dregs and remainder of a phlegmonous or *edematick* tumour.—*Harvey, Discourses on Consumptions*.

**Edematous, adj.** Having the character of edema.

**Edematous, adj.** Same as preceding.

**Edentulous, adj.** [Lat. *e*=without, *dens*, *dentis*=tooth.] Toothless.

The jaws of birds are always *edentulous* and sheathed with horn, of diverse configurations, adapted to their different modes of life and kinds of food.—*Owen, Lectures on the Comparative Anatomy of Vertebrate Animals*, introd. lect.

Some of the fungus kind, gathered for *edible* mushrooms, have produced a difficulty of breathing.—*Arbuthnot, On the Nature and Choice of Aliments*. The *edible* veneration decks the board.—*Prover*.

**Edible, s.** Edible object.

John Williams became, 1611-12, one of the proctors of the University of Cambridge, in which office he gave so noble and generous entertainment, as well in scholastic exercises as in *edible* and potables, to the Spanish ambassador, . . . that when they took their leave of him the Chancellor, with the approbation of the ambassador, told him that he had behaved so well that he was fit to serve a king.—*Wood, Fanti Quoniam*, 161.

**Edict, s.** [Lat. *edictum*=(thing spoken out or proclaimed; *dicto*=say.) Proclamation, command, or prohibition; law promulgated.

When an absolute monarch commandeth his subjects that which seemeth good in his own discretion, hath not his *edict* the force of a law?—*Hooker, Ecclesiastical Polity*.

The great King of kings Hath in the table of his law commanded That thou shalt do no murder: wilt you then spurn at his *edict*, and fulfil a man's?

*Shakespeare, Richard III. l. 4.*  
Severe decrees may keep our tongues in awe,  
But to our thoughts what *edict* can give law?

*Dryden.*  
The ministers are always preaching, and the governors putting out *edicts*, against gaming and dice playing.—*Addison*.

**Edificant. adj.** Building; constructing.  
*Rare.*

And as his pen was often militant,  
Nor less triumphant; so *edificant*  
It also was, like those bless'd builders, who  
Stood on their guard, and stoutly builded too.  
*Danvers, Verses on Gulliver, p. 73: 1635.*

**Edification. s.**

1. Improvement; instruction.

Out of these magazines I shall supply the town with what may tend to their *edification*.—*Addison, Guardian*.

2. Specially. Act of building up man in the faith; improvement in holiness.

Our blessed Saviour told us, that we must account for every idle word, not meaning that every word not designed to *edification*, or less prudent, shall be reckoned for a sin. *Jerry Taylor*.

**Edificatory. adj.** Tending to edification; instructive.

There can be no reason of restraining them from an exercise so beneficially *edificatory* to the church of God.—*Bishop Hall, Cases of Conscience*.

**Edifice. s.** Building; structure.

My love was like a fair house built on another man's ground; so that I have lost my *edifice* by mistaking the place where I erected it.—*Shakespeare, Merry Wives of Windsor, ii. 2.*

*God built*  
So spacious, and his line stretch'd out so far,  
That man may know he dwells not in his own;  
An *edifice* too large for him to fill.

*Milton, Paradise Lost, viii. 101.*  
The *edifice*, where all were met to see him,  
Upon their heads and on his own he pull'd.

*Id., Samson Agonistes, 1588.*  
As Tuscan pillars owe their original to this country, the architects always give them a place in *edifices* raised in Tuscany.—*Addison, Travels in Italy*.

**Edify. v. a.** [Lat. *edifico*.]

1. Build.

There was a holy chapel *edify'd*,  
Wherein the hermit went to say  
His holy things each morn and eventide. *Spenser*.  
Men have *edify'd*  
A lofty temple, and perfum'd an altar to his name.

*Chapman*.

2. Improve; enlighten; instruct; (this last word being also a term originating in the notion of *building*, but extended to that of forming, framing, making fit, improving, teaching, and the like. In both words the secondary meaning is the commonest).

He who speaketh no more than *edifyeth*, is unworthily reprehended for much speaking.—*Hooker, Ecclesiastical Polity*.

Men are *edified* when either their understanding is taught somewhat whereof, in such actions, it becometh all men to consider, or when their hearts are moved with any affection suitable thereunto.—*Ibid.*  
He gave, he taught, and *edify'd* the more,  
Because he shew'd by proof, 'twas easy to be poor.

*Dryden*.

3. Teach; persuade; convince.  
You shall hardly *edify* us, that those nations might not, by the law of nature, have been subdued by any nation that had only policy and moral virtue.—*Bacon, Advertisement touching a Holy War*.

**Edify. v. n.** Improve. *Rare.*  
I suppose Mr. Pope is no just as to pay our arrears, and that you *edify* as much by him as by us.—*Swift, To M. Blount, Feb. 1727. (Ord MS.)*

**Edifying. part. adj.** Improving; enlightening; instructing.

Life is no life without the blessing of an improving and an *edifying* conversation.—*Sir R. L'Estrange*.

**Edifying. verbal abs.** Improvement; enlightenment.

Seek that ye may excel to the *edifying* of the church.—1 *Corinthians, xiv. 12.*

**Edile. s.** [Lat. *edilis*, title of one of the old Roman magistrates whose office was the conservation of the public buildings; from *edica*=house, temple.] Generally a mere English form of the Latin word, though sometimes applied to officials connected with building in general.

The *Ediles*, ho! let him be apprehended.  
*Shakespeare, Coriolanus, iii. 1.*

**Edilship. s.** Office of edile.

He had then held no higher office than the *edilship*.—*Arnold, History of Rome, ch. xviii.*

**Edit. v. a.** [Lat. *edito* (*e*=out, and *do*=give)=give out.] Make an edition.

George Ellis, in his specimens of the early English poets, originally published in 1790, was, we believe, the first to introduce Layman to the general reader, by giving an extract of considerable length with explanatory annotations, from what he described as his 'very curious work'; which, he added, never had been, and probably never would be, printed. Subsequently another considerable specimen, in every way much more carefully and learnedly *edited*, and accompanied with a literal translation throughout into the modern idiom, was presented by Mr. Guest in his history of English rhythms. But now the whole work has been *edited* by Sir Frederick Madden, for the Society of Antiquaries in London.—*Craik, History of English Literature, i. 179.*

**Editing. verbal abs.** Act of an editor; making of an edition.

All these works have been printed, most of them more than once; and a good many other pieces have also been attributed to Chaucer which are either known to be the composition of other poets, or of which at least there is no evidence or probability that he is the author. Only the Canterbury Tales, however, has as yet enjoyed the advantage of anything like care in *editing*.—*Craik, History of English Literature, i. 217.*

**Edition. s.** Result of editing, or the work of one who edits, generally applied to the republication (generally with some revision or correction) of some work.

These are of the second *edition*.—*Shakespeare, Merry Wives of Windsor, ii. 1.*

The business of our redemption is to rub over the defaced copy of the creation, to imprint God's image upon the soul, and to set forth nature in a second and fairer *edition*.—*South, Sermons*.

In 1500 was printed at Paris the first *edition* of Erasmus's *Adages*, doubtless the chief prose work of this century beyond the limits of Italy; but this *edition* should, if possible, be procured in order to judge with chronological exactness of the state of literature, for as his general knowledge of antiquity, and particularly of Greek, which was now very slender, increased, he made vast additions. The *Adages*, which were now about eight hundred, amounted in his last edition to 4151; not that he could find so many which properly deserved that name, but the number is made up by explanations of Latin and Greek idioms, or even of single words. He declares himself, as early as 1504, dissatisfied of the first *edition* of his *Adages*, which already seemed meagre and imperfect. *Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries*.

**Editor. s.** Editor; publisher. *Rare.*

They cannot be exact in any map whatever, as Mr. Norden himself, who laboured much in this matter, maketh his complaint in that necessary Guide, added to a little, but not much augmented, by the late *editor*.—*Gregory, Posthumus, p. 321: 1630.*

**Editor. s.** Giver out, especially as a publisher, critic, reviser, or one who prepares a work for publication.

Put case some well-minded printer (as one of the *Stephens*) is willing to be at an excessive charge, in the fair publication of a learned and useful work for the benefit of the present and following ages; it is most just that he should, from the hands of princes or states, receive a privilege for the sole impression; that he may recover, with advantage, the deep expense he hath been at; otherwise, some interloper may perhaps underhand fall upon the work at a lower rate, and undo the first *editor*.—*Bishop Hall, Cases of Conscience, p. 33: 1630.*

When a different reading gives us a different sense, or a new elegance in an author, the *editor* does very well in taking notice of it.—*Addison, Spectator*.

This nonsense got into all the editions by a mistake of the stage editors.—*Pope, Notes on Shakespeare*.

**Editorial. adj.** Relating to, connected with, or consisting in, the duties of an editor.

Lambin and Heyne seem to have considered it no part of their *editorial* duty not to leave the subject of orthography wholly unnoticed.—*Dr. Parr, British Critic, Feb. 1794.*

Now, in looking on the newspaper press as one of the principal guides of public opinion, and as an authoritative source of practical convictions to a large part of the community, the most prominent characteristic which strikes the observer is, that it is anonymous—that all the writers officially connected with a newspaper are unknown to the reader, and strictly maintain their incognito. This is exactly the general character of the newspaper press in all countries. The *editorial* articles are always anonymous in form, and generally anonymous in fact; though, in some cases, their authorship may be disclosed in private, or may be ascertained upon inquiry.—*Sir G. C. Lewis, On the Influence of Authority in matters of Opinion, ch. ix.*

**Editorship. s.** Office and duty of an editor.

Lord Lyttelton puts it into the mouth of Boileau to observe to Pope, that a great part, so tied down to so tedious a translation as that of Homer, 'is a Columbus chained to an oar,' and that the *editorship* of Shakespeare, which Pope afterward undertook with more profit than reputation, was below him, and that his mind was unfit for the drudgery it requires. *Tyler, Historical Rhapody on Pope, p. 14.*

**Edits. v. a.** Perform the office of the *edits*, a kind of churchwarden or overseer; defend or govern the house or temple.

*Rare.*

The devotion wherof could not but move the city . . . to *edits* such a piece of divine office, where so many gods were present by their prayers, where not only the sports themselves, but all the company, were reputed holy for that time, and some accounted no ever after.—*Gregory, Notes on Scripture (Acts, xix. 35), p. 49: 1681.*

**Educable. adj.** Capable of being educated; susceptible of education. *Rare.*

The functions which attain their highest development in the mammalian class are of far nobler character than those which are more immediately connected with the maintenance of animal life. The progressive expansion of the brain is greatest, and the final predominance of reason over instinct is achieved, in the present class: sensation is its characteristic rather than muscular energy or irritability; the instincts become more varied, they are no less mechanical and more *educable*.—*Owen, Lectures on Comparative Anatomy, book. i.*

**Educate. v. a.** Bring up; instruct; train.

They breed, they brood, instruct and educate, And make provision for the future state.

*Dryden, Virgil's Georgics*.

**Educated. part. adj.** Instructed.

Education is worse in proportion to the grandeur of the parents; if the whole world were under one monarch, the heir of that monarch would be the worst *educated* mortal since the creation. *Swift, On modern Education*.

**Education. s.** Bringing-up; training; formation of character: (generally in *youth*).

*Education* and instruction are the means, the one by use, the other by precept, to make our natural faculty of reason both the better, and the sooner to judge rightly between truth and error, good and evil.—*Hooker, Ecclesiastical Polity*.

All nations have agreed in the necessity of a strict *education*, which consisted in the observance of moral duties.—*Steff*.

**Educational. adj.** Relating to, or consisting in, education.

Yet who that calmly, philosophically, it may almost be said religiously, surveys the power and strength of the Latin religion, . . . who that surveys it in its vast standing army of the clergy, and monks and friars, that had so long taken service in its defence, with its immense material strength of churches, monasteries, established law, rank; in its letters, and in its arts; in its charitable, *educational*, institutions: who will not rather wonder at its dissolution, its abolition in so huge a part of Christendom, than at its duration?—*Milman, History of Latin Christianity, b. xiv. ch. l.*

Even a government cannot safely adopt any authority in ecclesiastical matters, or assume the exclusive truth of any one form of Christianity. It must look mainly to the numbers of such religious persuasion, in deciding the question of endowments for religious and *educational* purposes; and to the religion of parents in establishing the rules for determining the errors in which children, incapable of judging for themselves, are to be brought up.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*.

**Educator. s.** One who educates.

Could not the *educators* of the lowest be censured under their laborious duty, without detracting from

**effect**. *s.* [Lat. *effectum*, neuter of the pass. part. of *efficio*, from *facio* = make; also *effectus*, a substantive with the same meaning.]

1. Anything brought into existence, or determined, by something antecedent to itself, such antecedent being called the Cause, and the two words *cause* and *effect* being correlatives.

You may see by her example, in herself wise, and of others beloved, that neither folly is the cause of vehement love, nor reproach the *effect*. — *Sir P. Sidney*.

*Effect* is the substance produced, or simple idea introduced into any subject, by the exerting of power. — *Locke*.

We see the pernicious *effects* of luxury in the ancient Romans, who immediately found themselves poor as soon as this vice got footing among them. — *Addison, Tracts in Italy*.

In order to express general and abstract truths concerning cause and effect, these terms, cause and effect, must be understood in a general and abstract manner. When one *event* gives rise to another, the first *event* is, in common language, often called the cause, and the second the *effect*. Thus the meeting of two billiard-balls may be said to be the cause of one of them turning aside out of the path in which it was moving. For our present purposes, however, we must not apply the term cause to such occurrences as this meeting and turning, but to a certain conception, force, abstracted from all such special *events*, and considered as a quality or property by which one body affects the motion of the other. And in like manner in other cases, cause is to be conceived as some abstract quality, power, or efficiency, by which change is produced: a quality not identical with the *events*, but disclosed by means of them. Not only is this abstract mode of conceiving force and cause useful in expressing the fundamental principles of science; but it supplies us with the only mode by which such principles can be stated in a general manner, and made to lead to substantial truth and real knowledge. Understanding cause, therefore, in this sense, we proceed to our axioms.

Nothing can take place without a cause. Every *event*, of whatever kind, must have a cause in the sense of the term which we have just indicated; and that it must, is a universal and necessary proposition to which we irresistibly assent as soon as it is understood. We believe each appearance to come into existence, — we conceive every change to take place, — not only with something preceding it, but something by which it is made to be what it is. An *effect* without a cause — an *event* without a preceding condition involving the efficiency by which the *event* is produced — are suppositions which we cannot for a moment admit. That the connexion of *effect* with cause is universal and necessary, is a universal and constant conviction of mankind. It pervades the minds of all men, undisturbed by all the assaults of sophistry and skepticism; and, as we have seen in the last chapter, remains unshaken, even when its foundations seem to be ruined. This axiom, however, to a certain extent, our idea of cause; and when that idea is clearly apprehended, the axiom requires no proof, and indeed admits of none which makes it more evident. That, notwithstanding its simplicity, it is of use in our speculations, we shall hereafter see; but in the first place, we must consider the other axioms belonging to this subject.

*Effects* are proportional to their causes, and causes are measured by their *effects*. We have already said that cause is that quality or power, in the circumstances of each case, by which the *effect* is produced;

and this power, an abstract property of the condition of things to which it belongs, can in no way fall directly under the cognizance of the senses. . . . Causes may be greater or less; as, for instance, the force of a man is greater than the force of a child. But how much is the one greater than the other? How are we to compare the abstract conception, force, in such cases as these? To this, the obvious and only answer is, that we must compare causes by means of their *effects* — that we must compare force by something which force can do. The child can lift one finger; the man can lift ten such fingers: we have here a means of comparison. . . . The cause determines the *effect*. The cause being the same, the *effect* must be the same. The connexion of the two is governed by a fixed and inviolable rule. It admits of no ambiguity. Every degree of intensity in the cause has some peculiar modification of the *effect* corresponding to it. Hence the *effect* is an infallible index of the amount of the cause; and if it be a measurable *effect*, gives a measure of the cause. We can have no other measure; but we need no other, for this is exact, sufficient, and complete. — *Whewell, Novum Organum reductum*.

Whoever is an effective real cause of doing his neighbour wrong is criminal, by what instrument he does it.—*Jeremy Taylor*.

Of the light or heat falling on any mass, a part, more or less considerable, is reflected; and only the remaining part works molecular changes in the mass. Next it is to be noted that the effective force is itself divisible into the temporarily effective and the permanently effective. . . . Concerning these divisions and subdivisions of any force affecting an aggregate, the fact which it chiefly concerns us to observe, is, that they are complementary to each other. Of the whole incident force, the effective must be that which remains after deducting the non-effective. The two parts of the effective force must vary inversely as each other: where much of it is temporarily effective, little of it can be permanently effective; and vice versa. Lastly, the permanently effective force, being expended in work both the inextensible re-arrangements which constitute chemical modification, and the sensible re-arrangements which result in structure, must generate of either kind an amount that is great or small in proportion as it has generated a small or great amount of the other.—*Herbert Spencer, First Principles*.

## 4. Having the power of operation; useful; fit for action: (applied chiefly to soldiers and sailors).

It was suspected that the effective men bore but a small proportion to the invalids.—*W. M. Russell, The Crimean War*, ch. ix.

I never knew any man so illustrate the difference between the feminine and the effeminate.—*Coleridge, Table Talk*.

Effervescence. *s.*

## 1. See last extract.

In the physical sense, effervescence signifies an intestine motion, produced by mixing two bodies together that lay at rest before; attended sometimes with a hissing noise, frothing, and ebullition.—*A. R. Basknot, On the Nature and Choice of Aliments*.

Take chalk, ignite it in a crucible, and then powder it; put it into strong spirit of nitre, 'till it becomes sweetish, and make up effervescences upon the injection of the chalk.—*Grew*.

When gaseous matter is suddenly extricated with a hissing sound during a chemical nature, or by the application of a chemical solvent to a solid, the phenomenon, from its resemblance to that of simmering or boiling water, is called effervescence. The most familiar example is afforded in the solution of sodic powders; in which the carbonic acid gas of sesquicarbonate of soda is extricated by the action of citric, or tartaric, acid.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

## 2. Growing hot.

## 2. Worn out with age.

All that can be allowed him now, is to refresh his decrepit, effete senility with the history of his former life.—*South, Sermons*.

Up to the eighth century Rome had not been absolutely discovered from the ancient and decrepit civilisation of the old empire. After a short period of subjection to the Ostrogothic kingdom, by the conquest of Justinian she had sunk into a provincial city of the Eastern realm. In the eighth century she suddenly, as it were, burst the bonds of her connexion with the older state of things, disjoined herself for ever from the effete and hapless East, and placed herself at the head of the wide . . . and vigorous civilisation of the West.—*Milman, History of Latin Christianity*, b. iv. ch. ix.

Efficacious. *adj.* [Lat. *efficax*.] Productive of effects; powerful to produce the consequence intended.

(For further examples see fourth extract under Effect.)

Efficiency. *s.* Efficient character; agency; production of effects; power.

The manner of this divine efficiency being far above us, we are no more able to conceive by our reason, than creatures unreasonable by their sense are able to apprehend after what manner we dispose and order the course of our affairs.—*Hooker, Ecclesiastical Polity*.

Stunning against conscience has no special productive efficiency of this particular sort of sinning, more than of any other.—*South, Sermons*.

They were not content merely to know that one phenomenon was always followed by another; they thought that they had not attained the true aim of science, unless they could perceive something in the nature of the one phenomenon, from which it might have been known or presumed previous to trial that it would be followed by the other; just what the writer, who has so clearly pointed out their error, thinks that he perceives in the nature of the phenomenon volition. And to complete the statement of the case, he should have added that these early speculators not only made this their aim, but were quite satisfied with their success in it; not only sought for causes which should carry in their mere statement evidence of their efficiency, but fully believed that they had found such causes.—*J. S. Mill, System of Logic*, iii. 2, 9.

**efficient. adj.** Causing effects; that makes the effect to be what it is.

a. As opposed to Final.

Your answering in the final cause, makes the believe you are at a loss for the efficient.—*Collier, Essay on Thought.*

b. As opposed to Metaphysical. Physical; material; real.

Of course the religious ground of the nationality of the Church consists in its claim of spiritual and personal descent from its inspired founders; but the constitutional ground of its title is in the law; and the actual ground, or, so to speak, the efficient or material cause, of its standing in the law, is to be found in its possession of a preponderance of the social forces, of which law itself is only one.—*Gladstone, The State in its Relations with the Church, ch. vi.*

The notion of cause being the root of the whole theory of induction, it is indispensable that this idea should... be, with the utmost practicable degree of precision, fixed and determined.... I premise, then, that when... I speak of the cause of any phenomenon, I do not mean a cause which is not itself a phenomenon; I make no research into the ultimate, or ontological cause of anything. To adopt a distinction familiar in the writings of the Scotch metaphysicians, and especially of Reid, the causes with which I concern myself are not efficient, but physical causes. They are causes in that sense alone, in which one physical fact is said to be the cause of another. Of the efficient causes of phenomena, or whether any such causes exist at all, I am not called upon to give an opinion. The notion of causation is decided, by the schools of metaphysics most in vogue at the present moment, to imply a mysterious and most powerful tie, such as cause, or at least does not exist between any physical fact and that other physical fact on which it is invariably consequent, and which is popularly termed its cause; and thence is deduced the supposed necessity of ascending higher, into the essences and inherent constitution of things, to find the true cause, the cause which is not only followed by, but actually produces, the effect. No such necessity exists for the purposes of the present inquiry, nor will any such doctrine be found in the following pages. But neither will there be found anything incompatible with it.... Among modern philosophers, Leibnitz laid it down as a self-evident principle that all physical causes without exception must contain in their own nature something which makes it intelligible that they should be able to produce the effects which they do produce. Far from admitting volition as the only kind of cause which carried internal evidence of its own power, and as the real bond of connexion between physical antecedents and their consequents, he demanded some naturally and per se efficient physical antecedent as the bond of connexion between volition itself and its effects.... The Cartesian... affirmed it to be impossible that a material and a mental fact could be causes one of another. They regarded them as mere occasions on which the real agent, God, thought fit to exert his power as a cause. When a man wills to move his foot, it is not his will that moves it, but God (they said) moves it on the occasion of his will. (God, according to this system, is the only efficient cause, not quâ mind, or quâ endowed with volition, but quâ omnipotent.... All this, undoubtedly, shows that it is the disposition of mankind in general, not to be satisfied with knowing that a fact is invariably antecedent and another consequent, but to look out for something which may seem to explain their being so—something *à rebours* and *à vers* it is *à rebours*.—*J. S. Mill, System of Logic*, lib. 5, c. 2.

**efficient. s.** Efficient cause.

God, which moveth meer natural agents as an efficient only, doth otherwise move intellectual creatures, and especially his holy angels.—*Hooker, Ecclesiastical Polity.*

There are so many questions concerning the efficient, the form, the matter of general councils, and their manner of proceeding, and their final sanction; that after a question is determined by a conciliary assembly, there are perhaps twenty more questions to be discussed before we can, with confidence, either believe or counsel upon its mere authority, or obtrude it upon others.—*Jeremy Taylor, Liberty of Prophecy*, § 4.

Observations of the order of nature carry the mind up to the admiration of the great efficient of the world.—*Sir M. Hale.*

**efficiently. adv.** In an efficient manner; effectively.

Logical or consequential necessity is, when a thing does not efficiently cause an event, but yet by certain infallible consequences does infer it.—*South, Sermons*, lib. 3, 37.

**efferee. v. a.** Make fierce; enrage. *Rare.*

With full woodness he effereed was;  
And wilfully him throwing on the grass,  
Did beat and bounce his head and breast full sore.  
—*Spenser, Faerie Queene*, lib. 11, 27.

**effigial. adj.** Exhibiting, having the cha-

The spontaneous generation of nitre in Spain, Egypt, and especially in India, is sufficient to supply the wants of the whole world. There this salt is observed to form upon the surface of the ground in silky tufts, or even in slender prismatic crystals, particularly during the continuance of the hot weather that succeeds copious rains. These saline efflorescences, after being collected by rude beams of broom, are lixiviated, allowed to settle, evaporated, and crystallized.—*Ure, Dictionary of Arts, Manufactures, and Mines*, v. *Pop.*

I would not, indeed, undertake to maintain (like Quintillian) that no one can be an orator who is not a virtuous man; but there certainly is a kind of moral excellence implied in that recommendation of all effort after display,—in that forgetfulness of self,—which is absolutely necessary, both in the manner

of writing, and in the delivery, to give the full force to what is said. — *Whately, Elements of Rhetoric*, ch. iii. § 5.

With the accent on the second syllable.

Thou couldst affection to her bare idea pay,  
The first that ever carved her the Platonic way.  
To see her in her own attractions dressed,  
Did all thy love arrest.

Nor lacked there now efforts to storm thy brand.  
Thy generous loyalty

Would ne'er a mercenary be,  
But cheer to serve her still without a livery.

*Oldham, Poem on the Death of*

*Mr. Charles Morant.*

Dr. Johnson places the accent on the second syllable of the word; though the example, which he brings from Pope, presents it on the first. **Egestion.** *s.* Act of throwing out the dig-

ested food at the natural vents.

Neither the procuring of ready concoction, nor  
the avoiding of wearisome labouring, nor the enter-  
taining of moderate walking, nor the disposition

soluble *egestion*; no, nor any thing else that can  
preserve health unto us, if God himself do not  
sustain us. — *Fotherby, Athermistic*, p. 237: 1651.

The animal soul or spirits manage as well their

**Egg.** *s.* [A.S. *egg*.]

1. Embryo, with its envelopes, of such ani-

mals as do not bring forth their young  
alive. (Its popular application is to what  
is laid by birds and certain reptiles. In

*Physiology*, however, the spawn of frogs  
and fishes is merely a collection of *eggs*.

With the lower animals and vegetables, and  
even with mammals, the object is really  
the same; *ovum*, however, and *ovule* are  
the technical names, being simply transla-

tions of *egg* into Latin, indeed the same  
word.)

An *egg* was found, having lain many years at the  
bottom of a moat, where the earth had somewhat  
overgrown it; and this *egg* was come to the hard-  
ness of a stone, and the colours of the white and  
yolk perfect. — *Baron.*

Therefore think him as the serpent's *egg*.  
Which, hatch'd, would, as his kind, grow mis-  
chievous. *Shakespeare, Julius Caesar*, ii. 1.

*Eggs* are perhaps the highest, most nourishing,  
and exalted of all animal food, and most indigesti-  
ble. — *Arbuthnot*.

Every insect of each different kind,  
In its own *egg*, cheer'd by the solar rays,  
Organs involv'd and latent life displays.

shape, of an *egg*.

neck, such as chymists are wont to call a phallo-  
physical *egg*. — *Boyle*.

wantonness, he forbiddeth as severely as adultery itself.—*Translation of Hallinger's Sermons*, p. 234. (She) did egg him on to tell how fair she was. *Warner, Albion's England*. Muddy becomes pleasant to him who is pursuing his amia, and whom ardour of inclination eggs him forward, and carrieth him through every obstacle.—*Derham, Physico-theology*.

With sweet musk rose, and with *egplantine*.  
*Shakespeare, Midsummer-Night's Dream*, il. 2.

Outsweeten'd not thy breath. *Id.*, *Cymbeline*, iv. 2.  
Myrmora with *egplantine* were spread,  
A hedge about the sides, a covering over head.  
*Dryden*.

Applied, by Milton, either inaccurately or provincially, to the *honeysuckle* or some plant of similar habit.

Through the sweet-brier or the vine,  
Or the twisted *egplantine*. *L'Allegro*.

**Ego.** A Latin pronoun meaning I; with which it is the same word, the *g* being softened down to the semivowel *y*, and so, apparently, lost in the present diphthongal term. In German, *ich*; Danish, *jeg*; Swedish, *jag* (the *j* sounded as *y*); A.S. *ic*. In English, so far as it is used, it is a substantive rather than a pronoun, meaning the thinking subject whatever it may be. Its chief application is in those systems of philosophy which take us their starting-point the person thinking, as cognized by himself; this being either the only absolute certainty, or the nearest approach to one. All beyond, i.e. the rest of the world, is non-*ego*; concerning the reality of which, doubts are far more possible than in the case of the thinking individual or Subject. The German form is the vernacular *ich*; Germany being the country in which the philosophy under notice is the most developed. In England, however, *ego* is the better form, as being the most convenient base for derivatives. Laying aside the rare form *Egomism*, we have two approximately concurrent forms; one in *-ist* simply, the other in *-ist*. As both exist, it is better to distinguish between them than to use them as synonyms; the form in *-ism* being restricted to the purposes of philosophy.

(For examples see extracts under Egotism and Egotize.)

### Egotism. s. Reference to Ego.

Napoleon, himself not the superfluous of great men, and ballasted sufficiently with prudence and *egoism*, had, nevertheless, as is clear enough, an idea to start with; the idea that democracy was the cause of man, the right and infinite cause.—*Carlyle, Critical and Miscellaneous Essays*, Sir Walter Scott.

### Egotist. s. One who refers much or all to Ego.

Hitherto Des Cartes was uncertain of every thing but his own existence, and the existence of the operations and ideas of his own mind. Some of his disciples, it is said, remained at this stage of his system, and got the name of *Egotists*.—*Reid*.

### Egoty. s. Egoism. Rare.

This innocent imposture, which I have all along taken care to carry on, as it then was of some use, has since been of regular service to me, and, by being mentioned in one of my papers, effectually recovered my *egoty* out of the hands of some gentlemen who endeavoured to correct it for me.—*Swift, Harrison's Teller*, no. 28. (Ord MS.)

If you would permit me to use a school term, I would say the *egoty* remains.—*Wallington, Religion of Nature delineated*, sect. 9, § 8. (Ord MS.)

### Egomism. s. Egotism. Rare.

That kind of egotism called *egomism*.—*A. Butler, Enquiry into the Nature of the human Soul*, il. 21: 1787.

**Egotism. s.** Fault committed in writing by the frequent repetition of the word *ego*, or I: too frequent mention of a man's self, in writing or conversation.

The most violent *egotism* which I have met with, in the course of my reading, is that of Cardinal Wolsey's; *ego et rex meus*, I and my king.—*Spectator*.

### Egotist. s. One who is always repeating the word *ego*; I: talker of himself.

A tribe of *egotists*, for whom I have always had a mortal aversion, are the authors of memoirs, who are never mentioned in any works but their own.—*Spectator*.

To return for a moment to the parallel which we have been attempting to draw between Milton and Dante, we would add that the poetry of these great men has in a considerable degree taken its character from their moral qualities. They are not *egotists*. They rarely obtrude their idiosyncrasies on their readers. They have nothing in common with those modern beggars for fame, who extort a pittance from the compassion of the inexperienced by exposing the nakedness and sores of their minds.—*Macaulay, Critical and Historical Essays*, Milton.

### Egotistical. adj. Having the character of an Egotist.

The sonnets . . . are . . . dignified by a sobriety and greatness of mind to which we know not where to look for a parallel. It would, indeed, be scarcely safe to draw any decided inferences as to the character of a writer from passages directly *egotistical*. But the qualities which we have ascribed to Milton, though perhaps most strongly marked in these parts of his works which treat of his personal feelings, are distinguishable in every page, and impart to all his writings, prose and poetry, English, Latin, and Italian, a strong family likeness.—*Macaulay, Critical and Historical Essays*, Milton.

### Egotize. v. n. Write or speak as an egotist.

I *egotize* in my letters to thee, not because I am of much importance to myself, but because to thee both *ego* and all that *ego* does are interesting. *Cooper, Letter to Lady Hesketh*. (Rich.)

### Egre. s. [A.S. *egor*.] Sudden and rapidly rising tide.

From the peculiar disposition of the earth at the bottom, wherein quick excitations are made, may arise those *egres* and flows in some estuaries and rivers; as is observable about Trent and Humber in England.—*Sir T. Browne, Vulgar Errors*.

### Egregious. adj. [Lat. *egregius*, i.e. *e grege*, separated or selected from the flock.] Eminent; remarkable; extraordinary.

Ah me, most credulous fool!

*Egregious* murderer. *Shakespeare, Cymbeline*, v. 2. If any person of good desert shall wilfully be a delinquent, the same man ought, notwithstanding his former service, to be punished. Horatio, that in combat gained the victory against the Albani, having insolently slain his own sister, was, notwithstanding his *egregious* act and the fresh memory thereof, called into trial of his life, and with great difficulty obtained pardon.—*Sir W. Raleigh, Arts of Empire*, ch. xxvi.

We may be bold to conclude, that these last times, for insolence, pride, and *egregious* contempt of all good order, are the worst.—*Hooker, Ecclesiastical Polity*, preface.

Reader, try by this the *egregious* impudence of this fellow.—*Bishop Hall, Honour of the married Clergy*, p. 168.

Voluntarily therefore and of right we congratulate this accession of dignity to your *egregious* merits, and the most worthy guardian of so much virtue.—*Milton, Letters of State*.

He might be able to adorn this present age, and furnish history with the records of *egregious* exploits, both of art and valour.—*Dr. H. More, Antidote against Atheism*.

And hence the *egregious* wizard shall foredoom

The fate of Louis, and the fall of Rome. *Pope*.

Eminently bad; remarkably vicious. This is the usual sense. Dr. Johnson says. This remark requires further notice. In the old dictionary of Hubert, *egregious* is defined by *excellent* only. In that of Cockeram, it has the same definition, with this addition, 'sometimes evil, base.' At the close of the sixteenth century, however, the bad sense of the word seems to have been common; for Gabriel Harvey having used the phrase 'an *egregious* argument,' he is thus reprehended by Nash, in Four Letters Confuted, 1588: '*Egregious* is never used in English but in the extreme ill part.' Yet Raleigh and Milton, as I have shown in the additions to the first definition, considered the word as meaning eminently good, or illustrious, or famous.—*Todd*.

### Egregiously. adv. In an egregious manner.

Make the Moor thank me, love me, and reward me,

For making him *egregiously* an ass.

And practising upon his pears and quits.

Even to madness. *Shakespeare, Othello*, il. 1

He discovered that, besides the extravagance of every article, he had been *egregiously* cheated.—*Arbuthnot, John Bull*.

**Egress. s.** [Lat. *egressus*, part. of *egredior*—step or walk out; *egressio*, *-onis*—stepping or walking out.] Power or act of going out of any place; departure.

Thou shalt have *egress* and regress.—*Shakespeare, Merry Wives of Windsor*, il. 1.

In a nursery a maid alone, if she cannot have *egress*, before her window you shall have an old woman, or some prating gossip, tell her some tales of this clerk, and that monk, describing or commending some young gentleman unto her.—*Barton, Anatomy of Melancholy*, p. 283.

With the accent on the second syllable.

Gates of burning adamant,  
Bar'd over us, prohibit all *egress*.  
*Milton, Paradise Lost*, il. 487.

### Egression. s. Act of going out.

No thou may'st have a triumphal *egression*.—*H. Jonson, The Devil is an Ass*.

In the days and periods of their joy and festival *egressions*, they chose to throw some ashes into their chalices, some sober remembrance of their fatal period.—*Jeremy Taylor, Rule and Exercise of Holy Living*, il. § 1.

The swarming of troops is expressed in the swarming, their tumultuous manner of issuing out of their ships, and the perpetual *egression*, which seemed without end, are imaged in the bees pouring out.—*Pope* (probably after *Chapman*).

Cooper's ponderous blank verse detains you every step with some heavy Miltonian; Chapman gallops off with you his own free pace. Take a simile for example. The council breaks up—

Being abroad, the earth was overlaid  
With flocks to them, that came forth; as when  
Of frequent bees

Swarm rise out of a hollow rock, repairing the  
degrees

Of their *egression* endlessly, with ever rising new  
From forth their sweet nest; as their store, still  
As it failed, grew.

And never would cease sending forth her clusters  
To the spring.

They still crowd out so; this flock here, that  
There, bobbing

The heaviest flowers. *So*, &c., &c.

What endless *egression* of phrases the dog commands!—*Leah, Letter to Coleridge*.

### Egret. s. [Fr. *aigrette* tuft of feathers, tuft.]

1. Tuft of feathers forming an ornament so called.

Of the same work were their lawns; their head-tires of flowers, mixed with silver and gold, with some sprigs of *egrets* among; and, from the top of their dressing, a thin veil hanging down.—*H. Jonson, Masques*.

2. Grallatorial bird so called, the exact and original application of the term being uncertain. (At present, it most generally denotes a species of heron, the *Ardea alba* in the first instance; and, secondarily, or as a term accompanied with a qualifying adjective, the *Ardea Gargetta*; both occasional visitants of the British Isles).

We once received out of Andover the feathers of a bird shot there, which we suspect to have been the *egret*; this is the only instance, perhaps, of its having been recently found in England. One was shot in Ireland in the year 1748. That it was formerly very frequent here appears by some of the old bills of fare; in the famous feast of Archbishop Nevill, we find no less than a thousand *asterides*, *egrets*, or *egrits*, as it is differently spelt. Perhaps the *egrets* they were in as a delicacy during those days, occasioned their extirpation in our islands. Abroad they are still common, especially in the southern parts of Europe, where they appear in flocks.—*Pennant, British Zoology*.

Dr. Fleming remarks that 'it is possible the lapwing may have been referred to, as the most common bird with a crest.' To this opinion Mr. Selby subscribes. *Aigrette* and *egret* are common terms for a tuft of feathers; and the little *egret* appears to have been much too rare a species in this country to have afforded the supply. That the little *egret* ought, however, to be retained in our catalogues as a British bird, which has been denied, the following evidence will sufficiently prove.—*Tarrell, British Birds*.

Itches, storks, *egrets* [the zoological name not given], spoonbills, herons, and the smaller sorts of sandlarks and plovers, are now busily traversing the wet mud in search of the red worm which burrows there, or peering with steady eye to watch the motion of the small fry and aquatic insects in the ripple on the shore.—*Sir J. E. Tennant, Cydon*, pt. il. ch. ii.

### Egret. s. [Fr. *aigret*; perhaps from *aigre* = sour.] Species of cherry.

The sour-cherry, which inclineth more to white, is sweeter than the red; but the *egret* is more sour.—*Bacon*.

**Aggritudo.** *s.* [Lat. *aggritudo* - sickness; *ager* = sick.] Ailment; maulady. *Rare.*  
I do not intend to write to the cure of *aggritudo* or weakness confirmed. -- *Sir T. Elgot, Castel of Health*, h. iv. (Rich.)

**Egyptologist.** *s.* One engaged in Egyptology.

(For example see under Hieroglyphics.)

**Egyptology.** *s.* Study of the archeology of Egypt, especially in its connection with the Hieroglyphics.

(For example see under Hieroglyphics.)

**Eider.** *s.* [see extract.] Duck so called (Somateria mollissima) for the softness and warmth of its down: (generally used as the first element of a compound, giving *elder-duck*, *elder-down*; indeed it seems that *down* was the original meaning of the word).

The *elder duck*, though indigenous to some of the northern parts of England, as well as several of the Scottish islands, is only a winter visitor to the southern portions of the kingdom, and that, too, in very limited numbers. It is but rarely killed in Ireland. . . . It has been seen and shot on the Cornish, Devonshire, Dorsetshire, Hampshire, Sussex, and Norfolk coasts. . . . The most southern locality in this country at which this species is known to breed regularly is that visited by Pennant in July, 1789, and has been frequently visited by Mr. Selby, namely, the Farn Islands, situated upon the northern coast of Northumberland. . . . The *elder duck* is also called St. Cathbert's duck, from the circumstance of its breeding there on a rock called St. Cathbert's Isle, as well as upon other islands that form the group. . . . The late Earl of Derby's principal menagerie manager, who went to Sweden in the summer of 1830, brought back with him a brood of young *eidern*, which he reared, feeding them on slugs and the bodies of shelled molluscs. Several of these birds were reared at Knowsley. *Eider*, *elder*, or *idder* is the name applied to this duck in Germany, Sweden, Denmark, and Norway. . . . Young males of the *elder* are, at first, like the adult female. The windpipe of the male *elder* measures nine inches in length. -- *Varrick, British Birds*.

**Eight.** *s.* Same as Eyot.

**Eight.** *pr.* [A.S. *cahta*.] Cardinal number, or numeral, so called. In English notation, 8; in Roman, viii. As this is, alphabetically, the first of a very definite series of words, the remarks that apply to the entry of the numerals in general will be made here. It is submitted to the reader that the numerals are words which neither definition nor example will explain. They are not only used by everyone, but every time they are used their import explains itself. *One* is naturally single; 'all the others naturally plural. Nevertheless, *one* may be plural when it means a *unit*, and when two or more units (*ones*) are spoken of; and *two*, *three*, *four*, &c., may be singular when they mean a collection of *two*, of *three*, of *four*, and the like. In such cases, the word, as a part of speech, ceases to be a pronoun, and becomes a substantive, and, like other substantives, takes a plural form; as 'three *ones* make three'; 'two *uns* equal twenty.' For some of these collections we have separate and true substantial names; such as *unit* = a one; *pair*, *couple*, *brace*, &c. = a two; *leash* = a three; *dozen* = a twelve; *score* = a twenty; whence *half-dozen* = a six, and *half-score* = a ten. *Mound*, *dyad*, *triad*, *tetrad*, *pentad*, and *decad*, all of Greek origin, are terms of a more exotic and artificial character.

This singular character of a plural number, when the units of which it is composed are taken in mass, or collectively, is well illustrated by the numbers above *ten*, or the difference between the terminations *-teen* and *-ty*.

*Thirteen* = 10 + 3; *-teen* being merely *ten* in another form.

*Thirty* = 10 x 3; *-ty* being a contraction of *-* (=*a ten*, or *a decad*), a word long

obsolete as a separate term, and one which originated at that comparatively early epoch in our language when *ten*, like the Latin *decem* and the Greek *deka*, contained the sound of either *g* or *k*; a sound of which the nearest representative in the German family of languages is the *k* of the Mesogothic *taihun*.

Of true derivative forms the numerals have only one, viz. the ordinal, formed by the addition of *-th* (*ten*, *ten-th*), with or without certain internal changes (*five*, *fifth*, &c.); and even these are open to an exception. Several high authorities, on the strength of such words as the Danish *ogt* and the Greek *ēkta*, on the one side, and the *-m-* in words like *primus*, *septimus*, *ἑβδόμος*, &c. (respect being had to the probability of its being changed into *n*), on the other, have held that, where the cardinal ends in *m* or *n*, the ordinal form has (so to say) been reflected back upon it. Hence in *seo-en*, *ni-ne*, *teh-* (*teg-* or *tek-*) -*n*, the final letter is not cardinal, but ordinal. This, however, belongs to the department of comparative philology rather than to lexicography.

In most languages, the first two cardinals form the ordinals from some second basis; as *fir-st*, from the root of *fore*, and *second*, from the Latin *secundus*, connected with *sequor* = follow: a fact which theoretically excludes such ordinals as *outh* and *tooth*; though, as far as grammar goes, they are not impossible forms. In some respects, *odd* is a numeral, as in *twenty-odd*. He would be a bold man, however, who wrote *odd-th*; though there are many cases where the word would be convenient. Practically speaking, all the combinations of which a numeral is a basis, except the ordinal, are compounds; the rule being (as has been shown in respect to the forms in *-teen* and *-ty*) that where there is Addition the second element is *-ten*; where Multiplication, *-ty* = a collection of *tens*. In few cases does that agglutination of separate words which constitutes a compound so closely take the guise of a derivative as in the Numerals.

These preliminaries show that, except in particular cases, the entry of one numeral is, in respect to authority, derivation, and the like, a formula for the entry of all the others.

**Eight.** *s.*

1. Collection of eight.

2. Figure of 8 in skating.

Fill I, tired out  
With cutting *eights* that day upon the pond,  
Where, three times slipping from the outer edge,  
I bump'd the ice into three several stars,  
Fell in a doze. *Tennyson, The Epic.*

**Eighteen, or Eighteen.** *pr.* [*eight* + *ten*, the second *t* being omitted, not only in speaking, but in spelling.] Cardinal of 8 + 10.

The accent falls on either syllable, according to the element upon which the stress is laid. Thus in counting from *ten* to *twenty* we say *thirteen*, *fourteen*, *fifteen*, &c., whereas 'from 3 to 13' is 'from *three* to *thirteen*.' Strictly speaking, then, *eighteen* and *eighteen* are different words; though it would be an overrefinement to treat them as such in the entry. It may be added that, etymologically, the spelling of both 18 and 80 should give two *ts* = *eight* + *ten*, *eight* + *ty*. This doubling, however, of the consonant, though real, has long been ignored both in spelling and speaking.

**Eighteenth, or Eighteenth.** *adj.* Ordinal of the preceding.

**Eightfold.** *adj.* (often with an adverbial construction, as, 'it increased *eightfold*.) Multiplied by eight.

**Eightth.** *adj.* Ordinal of eight.

**Eightly.** *adv.* As the eighth in order.

**Eightieth.** *adj.* Ordinal of eighty.

**Eighty.** *pr.* [*eight* + *ty* = *tig*.--see *Eighteen*.] Cardinal of 8 x 10.

**Esil.** *s.* [A.S. *esil*; N.Fr. *aasil* = vinegar.]

1. Vinegar; verjuice; any acid.

Cast in thy mind  
How thou resemblest Christ, as with *esil* poison,  
If thou paine thy taste; remember therewithall  
How Christ for thee tasted *esil* and gall. *Sir T. More.*

Like a willing patient, I will drink  
Potions of *esil*, 'gainst my strong infection. *Shakespeare, Hamlet 2.*

In the following extract from the well-known rant of Hamlet at the grave of Ophelia, the import of the word is doubtful; some explaining it *vinegar*, others as the river Ysel. In the quarto of 1603 the reading is *veasels*; in the later ones, *esil*; in the folio, *exile*:

'Swoonds! show me what thou'll do.  
Woo't weep? woo't fight? woo't fast? woo't tear  
thyself?

Woo't drink up *esil*? eat a crocodile?  
I'll do't. *Shakespeare, Hamlet, v. 2.*

2. River so called.

**Either.** *pron.* [see remarks at end of *Either, adv.*]

1. One of two indifferently.

Lepidus flatters both,  
Of both is flattered; but he neither loves,  
Nor either cares for him. *Shakespeare, Antony and Cleopatra, ii. 1.*  
No like these champions were,  
As they had been a very pair,  
So that a man would almost swear,  
That *either* had been *either*. *Dryden, Amphitruo.*

Goring made a fast friendship with Dicky, *either* of them believing he could deceive the other. *Lord Chatterton, History of the Girard Rebellion.*

I do not ask whether bodies do so exist, that the motion of one body cannot really be without the motion of another: to determine this *either* way, is to lay the question for or against a vacuum. -- *Locke.*

2. Each.

In the process of natural beings, there seem some to be creatures placed, as it were, in the confines of several provinces, and participating something of *either*. -- *Sir M. Hale.*

See'n times the sun has *either* tropick view'd,  
The winter banish'd, and the spring renew'd.

*Dryden, Virgil's Æneid.*

*Either* is often used improperly instead of *each*; as, 'Nadab and Abihu, the sons of Aaron, took *either* (each) of them his censer. *Each* signifies both of them, taken distinctly or separately; *either* properly signifies only the one, or the other, of them, taken disjunctively. For which reason the like expression in the following passages seems also improper: 'They crucified two other with him, on *either* side one; and Jesus in the midst.' (St. John, xii. 18.) 'On *either* side of the river was there the tree of life.' (Rev. xxii. 2.) *Lowth's Grammar*. -- *Johnson.*

3. Any one of a number exceeding two.

Henry VIII. Francis I. and Charles V. were so provident, as scarce a palm of ground could be gotten by *either* of the three, but that the other two would set the balance of Europe upright again. -- *Bacon.*

4. One or each (of two) in the reciprocal construction. *Rare.*

Since that they [married persons] have received *either* other from God, let them herein strive to show their thankfulness unto God, by endeavouring to bring *either* other nearer to God, by helping *either* other forward in the good wages of God; do *either* with other, as Anna did with her sonne Samuel, as she had him of God, so she bestowed him on God againe; returned *either* other again to God, and laboured to returne them better than they received. -- *Gataker, Wife in Debt*, p. 188. (Ord. M.)

**Either.** *adv.* In the way of an alternative.

We never heard of any ship that had been seen to arrive upon any shore of Europe; no nor of *either* the East or West Indies. -- *Bacon, New Atlantis.*

What perils shall we find,  
If *either* place, or time, or other course,  
Cause us to alter th' order now assigned? *De Witt.*  
*Either* your brethren have miserably deceived us,  
or power confers virtue. -- *Swift, Letter to Pope.*  
A distributive adverb, answered by *or*; *either* the

Too much of ornament, of outward show  
*Elaborate*: of inward, less exact.

Man is thy theme, his virtue or his rage  
Drawn to the life in each *elaborate* page. *Waller*.

**Elaboration. s.** Improvement by successive operations.

To what purpose is there such an apparatus of vessels for the *elaboration* of the spirit and eggs; such a tedious process of generation and nutrition? — *Ray*.

**Elaboratory. s.** Same as Laboratory. *Rare*.

He [Mr. Stahl] built his *elaboratory* in an old hall or refectory. . . . In the year following he was called away to London, and became operator to the Royal Society; and, continuing there till 1670, he returned to Osnaburg, and had several classes successively. The chymical club concluded; and A. W. paid Mr. Stahl 30 shillings, having, in the beginning of the class, given 30 shillings beforehand. — *Life of A. Wood*, sub ann. 1661.

**Elaine. s.** [Gr. *ἑλαιον* = oil.] In Chemistry. See extract.

The fluidity [of the oil] is very various, some being solid at ordinary temperatures, and others remaining fluid at the freezing point of water. Linseed oil, indeed, does not congeal till cooled from 4° to 18° below 0° F. The same kind of seed usually affords oils of different degrees of fluidity, so that in the process of refrigeration one portion concretes before another. Chevreul, who was the first to observe this fact, considers all the oils to be composed of two species, one of which resembles suet, and was thence styled by him *stearine*; and another, which is liquid at ordinary temperatures, and was called *elaine*, or *oleine*. By refrigeration and pressure between the folds of blotting paper, or in linen bums, the fluid part is separated, and the solid remains. By heating the paper in water, the liquid oil may be obtained separate. When alcohol is boiled with the natural oil, the greater part of the *stearine* remains undissolved. — *Enc. Dictionary of Arts, Manufactures, and Mines*.

Baronnet obtained *elaine*, or *oleine*, by exposing olive oil to a temperature of about 31° F. in order to cause the condensation of the *margarine*. — *Turner, Chemistry*, p. 150.

**Elamp. v. a.** Shine; give light. *Barbarous*.  
As when the cheerful sun, *elamping* wide,  
Glads all the world.

*G. Fletcher, Christ's Victory*, c. 1.  
Giles [Fletcher] seems to have more vigour than his elder brother, but less sweetness, less smoothness, and more affectation in his style. This, indeed, is deformed by words neither English nor Latin, but simply barbarous, such as *clamping*, *elazon*, *deprived*, *purpured*, *glitterant*, and many others. — *Hudson, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries*, pt. iii. ch. v.

**Elance. v. a.** [Fr. *élancer*.] Throw out; dart; cast as a dart or lance.

There is a docible season, a learning time in youth, which, suffered to *elapse*, and no foundation laid, seldom returns. — *Richardson, Clarissa*.

2. Lapse. *Rare*.

The attainment of this, however, [Doctor of Laws] was far from having upon Barium that effect which has been too often observed to be produced in others; who, having in their own opinion no higher object of ambition, have *elapsed* into idleness and security, and spent the rest of their lives in lazy enjoyment of their academical dignities. — *Johnson, Life of Barman*. (Ord MS.)

**Elastic. adj.** [Fr. *élastique*.] Having the power of returning to the form from which it is distorted or withheld; springy; having the power of a spring.

If the body is compact, and bends or yields inward to pressure, without any sliding of its parts, it is hard and *elastic*, returning to its figure with a force rising from the mutual attraction of its parts. — *Sir L. Newton, Opticks*.

The most common diversities of human constitutions arise from the solids, as to their different degrees of strength and tension, in some being too lax and weak, in others too *elastic* and strong. — *Arbuthnot, On the Nature and Choice of Aliments*.

**Elastical. adj.** Same as Elastic. *Rare*.

**Elatarium. s.** [Gr., Lat.] Fruit of the squirting cucumber (Momordica Elatarium or Ecbalium officinarum); inspissated juice of the same used in medicine as a drastic hydragogue purge.

In the event of a case of poisoning by *elaterium*, the remedies would be emollient drinks, . . . stimulant, . . . blood-letting to subdue the inflammatory symptoms should the state of the general system be contraindicated. — *Forsica, Materia Medica*, p. 1088.

**Elation. s.** Haughtiness proceeding from success; pride of prosperity.

**Elbow. s.** [A.S. *elboga*.]

1. Next joint or curvature of the arm below the shoulder.

In some fair evening, on your *elbow* laid,  
You dream of triumphs in the rural shade. *Pope*.  
Although the bones of the pectoral limbs are swathed in skin, the fins project more freely from

the trunk, the *elbow* is better marked; the limb-joints are synovial, not synsarcotic merely, as in Cetacea; and although there are clearer indications of the digits in the fin of Merluccius, none of the digits have more than three phalanges. — *Owen, Anatomy of Vertebrates*, p. 457.

2. Any flexure or angle.

Fruit trees, or vines, set upon a wall between *elbows* or buttresses of stone, ripen more than upon a plain wall. — *Baron*.

**At the elbow.** Near; at hand.

Straight will he come;  
Wear thy good rapier here, and put it home;  
Quick, quick; fear nothing, I'll be at thy *elbow*.  
*Shakespeare, Othello*, v. 1.

**Jog the elbow.** Draw attention; waken up; remind a person of anything.

I have long gone about with the conviction that I had a work to do — a Work, if you like, with a great W: a purpose to fulfil; a claim to leap into, a Cartesian horn and foot; a great social evil to discover and to remedy. That conviction has pursued me for years. It has dogged me in the busy street; seated itself by me in the lonely study; *jogged my elbow* as it lifted the wine-cup at the festive board; pursued me in the maze of Rotten Row; followed me in far lands. On Brighton's shingly beach or Margate's sand; the voice outpiped the roaring of the sea; it whistles in my nightcap, and it whispers, 'Wake, slumberer, thy work is not done yet.' — *Thackeray, Book of Snobs*, ch. 1.

**Out at elbows.** Applied to the sleeve of a coat or tunic so worn out as to show the elbow or shirt beneath.

It thrusts and stretches out,  
And *elbows* all the kingdoms round about. *Dryden*.  
If fortune takes not off this boy's helms,  
He'll make mad work and *elbow* out his neighbours. *Id.*

One *elbows* him, one justles in the shoal.

*Id., Jew of the Satires*.  
The intruders [the Dutch under William III.] would soon rule every corporation. They would *elbow* our own aldermen off the Royal Exchange. They would buy the hereditary woods and halls of our country gentlemen. — *Macaulay, History of England*, ch. xx.

**Elbow. v. n.** Clash; jostle; be quarrelsome.

*Granger, Ode on Solitude*.

In the following extract we find it followed by similar terms connected with the *shoulder*.

Men of real merit will, if they persevere, at last reach the station to which they are entitled, and intruders will be ejected with contempt and derision. But it is no small evil that the avenues to fame should be blocked up by a swarm of noisy, pushing, *elbowing* pretenders, who, though they will not ultimately be able to make good their own entrance, hinder, in the mean time, those who have a right to enter. All who will not disgrace themselves by joining in the unseemly scuffle must expect to be at first hustled and *shouldered* back. — *Macaulay, Critical and Historical Essays, Robert Montgomery's Poems*.

**Elbowroom. s.** [the accent stands as in the previous edition; the present editor thinks that *elbow-room* is the commoner pronunciation, so that the combination gives two words rather than a compound, as is certainly the case with *Elbowchair*.] Room to stretch out the elbows

on each side; perfect freedom from confinement; easy freedom.

Now my soul hath elbowroom;  
It would not out at windows nor at doors.  
*Shakespeare, King John, v. 7.*  
The natives are not so many, but that there may be elbowroom enough for them, and for the adventures also.—*Bacon.*

A politician must put himself into a state of liberty to provide elbowroom for conscience to have its full play in.—*Southey, Sermons.*

These (with and without) are faculties which never appear in full leaders but when the mind is perfectly at ease, and, as an excellent writer says, enjoys her elbow-room.—*Smollett, Expedition of Humphrey Clinker.*

Two hours will not afford elbow-room.—*Recreations of a Country Parson, p. 334.*

**Eld. s.** Old age; decrepitude; old generation, or old people in general. *Obsolete, or archaic.*

Her heart with joy unwonted fully swell'd,  
As feeling wondrous comfort in her weaker old.

*Spenser, Faerie Queen.*  
Thy blessed youth  
Becomes as aged, and doth beg the aims  
Of palsied old.

*Shakespeare, Measure for Measure, iii. 1.*  
They count him of the green-hair'd old. *Chapman.*  
He thought it touch'd his deity full near,  
If likewise he were fair one would not,  
Thereby to wipe away the infamous blot  
Of long unrequited love and childless bed.

*Milton, On the birth of a fair Infant.*  
Roll on, vain days! full reckless may ye flow,  
Since Time hath left what'er my soul enjoy'd,  
And with the ill of old mine earlier years ally'd.

*Byron, Child Harold, ii. 99.*  
That the prince of the powers of darkness, passing  
by the flower and pomp of the earth, should lay  
propitious siege to the weak fantasy of indignant old—  
has neither likelihood nor unlikelihood a priori to us, who have no measure to guess at his policy, or standard to estimate what rate those mile sons may fetch in the devil's market.—*Lamb, Essays of Elia, Witches and other Night Fears.*

**Elder. adj.** [This and *eldest* are the Anglo-Saxon comparative and superlative of *cald*—old. This means that there is in English no such positive as *old*; and that, as examples of the Anglo-Saxon degrees of comparison, the words are perfectly regular. *Elder* and *eldest* are derived from *cald*, just as *older* and *oldest* are from *old*; and the true explanation of their form lies in the fact that, in certain words, the Anglo-Saxon not only added *-r*, or *-st*, to the positive, but changed the vowel as well. Thus—

*Lang, Leugre, Leugst*—Long, &c.  
*Strang, Strengre, Strengst*—Strong, &c.  
*Gyngre, Gyngre, Gyngst*—Young, &c.  
*Scort, Scortre, Scortst*—Short, &c.  
*Hoch, Hychre, Hychst*—High, &c.  
*Fald, Fylde, Fyldest*—Old, &c.

In the word under notice this change of vowel, though out of use with the others, is still retained; the result being that we have two concurrent formations—*old, older, oldest*, and *old, elder, eldest*, with a difference of import to match. The forms in *o* mean simply *more* and *most old* in general; as, John is *older* than Thomas, &c. The forms in *e* mean *older*, or *oldest*, as the member of some special class; as, John is the *elder* brother of Thomas, and the *eldest* son of James. *Elder*, moreover, can be used as a substantive, having the plural *elders*.]

1. Opposed to *younger*.  
They bring the comparison of younger daughters conforming themselves in attire to their elder sisters.—*Hooker, Ecclesiastical Polity.*  
How I firmly am resolv'd, you know;  
That is, not to bestow my youngest daughter,  
Before I have a husband for the elder.

*Shakespeare, Twelfth Night, ii. 1.*  
Among the Lacedæmonians, the chief magistrates, as they were, so they are called, *elder men*.—*Sir W. Raleigh, History of the World.*

The elder of his children comes to acquire a degree of authority among the younger, by the same means the father did among them.—*Sir W. Temple.*

2. Older.  
Let still the woman take  
An elder than herself; so wears she to him,  
So sways she level in her husband's heart.

*Shakespeare, Twelfth Night, ii. 4.*

Fame's high temple stands;  
Stupendous pile! not rear'd by mortal hands!  
Whate'er proud Rome, or artful Greece behold,  
Or elder Babylon, its frame exceed'd.  
*Pope.*

**Elder. s.**

1. One who is older than another.

Many nations are very superstitious and diligent observers of old customs, which they received by continual tradition from their parents, by recording of their baris and chronicles, in their songs, and by daily use and example of their elders.—*Spenser, View of the State of Ireland.*

At the board, and in private, it very well becometh children's innocency to pray, and their elders to say Amen.—*Hooker, Ecclesiastical Polity.*

2. Individuals who lived at an earlier period; forerunners in point of time: (as the Englishmen of the time of Elizabeth as compared with those of the present reign). Ancestry in most cases, conveys the notion of lineage as well, which this word does not. See Forerider.

Says the poem, If it will be no better, e'en carry your hand as your elders have done before you.—*Sir R. L. Estlin.*

I love my patience, and I love it too,  
Where works are censur'd, not as bad, but new;  
While, if our elders break all reason's laws,  
Those fools demand, not pardon, but applause.

*Pope.*  
3. One whose age gives him a claim to credit and reverence.

Helm not an elder, but treat him as a father,  
and the younger men as brethren.—*Timothy, v. 1.*  
The blushing youth their virtuous awe disclose,  
And from their seats the reverend elders rose.

*G. Sandys.*

4. Specially applied to certain magistrates, or office-bearers, under different constitutions, particularly the ecclesiastical polity of Scotland, where it translates Presbyterian.

Pen-bitten squal, an assembly brew'd  
Of clerks and elders; and like the rude  
Chorus of presbytery, where laymen rule  
With the tame woolpack clergy by their side.

*Cleaveland.*  
Ten of the principal members of the council of elders were appointed ambassadors.—*Arnold, History of Rome, ch. xlii.*

[Connected with this sense is the power of the A.S. *caldorman*, which in Todd's edition is entered twice, (1) as *caldorman*, (2) as *caldorman*.]

'The king, archbishop, corles, bishops, *caldormen*, and other clerics, may suffice to prove them to be acts of parliament.' (Snell, Rights of the Kingdom, p. 29.)

'These *caldormen* who were ranked with bishops in the Saxon laws, and in the old Latin translation called *abbates*, were such as had counties or other territories under their government, and had the same power and jurisdiction as the earls had afterwards. The word *caldormen* signifies no more than elder, or senator; but it signified among the Saxons a duke, an earl, a nobleman, and petty viceroy, a consul.' (Shelton, Notes on Wotton's Abstract of Hicet's Thesaurus, p. 60.)

Enjoying all his *caldormen* and sheriffs immediately to apply themselves to learning, or to quit their office. (Burke, Abridgement of English History, b. ii. ch. iv.)

The word, however, is Anglo-Saxon rather than English; the English term being Alderman, and the office which it indicates wholly different from what it was before not only the Norman, but the Danish, conquest. That it is to be found (the form in *-a-* being the true one) in modern writers is true; but so have many other words of like character—words which are not only dead as *numa*, but which have nothing, as *objects*, to correspond with them.

The dignity next in importance to the royal is that of the *caldorman*, or duke. The proper Anglo-Saxon name for this officer, as ruler and leader of an army, is *Hærotop*... a word compounded of *here*, an army, and *top*, a leader.

But, inasmuch as the dual functions of the Anglo-Saxon polity were by no means confined to the service in the field, the peculiar title of *Hærotop* is very rarely met with, being for the most part replaced by *caldorman*, or *alderman*, which denotes civil as well as military pre-eminence. . . . The word *alder*, or *alder*, in Anglo-Saxon, denotes princely dignity without any designation of function whatever. . . . It is derived

from an adjective implying age, though practically this idea does not by any means survive in it, any more than it does in the word *senior*, the origin of the feudal term *seigneur*. . . . The new constitution, introduced by Cnut, reduced the *caldorman* to a subordinate position; over several counties was now placed one earl, or earl, in the northern sense a jarl, with power analogous to that of the Frankish dukes. The word *caldorman* itself was used by the Danes to denote a class, gentle indeed, but very inferior to the princely officers who had previously borne the title. It is under Cnut . . . and the following Danish kings, that we gradually lose sight of the old *caldorman*: the king rules by his earls, and his earls and the *caldormen* vanish from the counties. From this time the king's writs are directed to the earl, the bishop, and the sheriff of the county; but in no one of them does the title of the *caldorman* any longer occur; whilst those sent to the towns are directed to the bishop and the portreeve, or prefect of the city. Gradually the old title even altogether, except in the cities, where it denotes an inferior jurisdiction, much as it does among ourselves at the present day.' (Kemble, The Saxons in England, b. ii. ch. iv.)

**Elder. s.** (often used adjectivally, especially with *tree* and *berry*, or as the first element in a compound.) [A.S. *elder*.] Name of certain native trees of the genus *Sambucus*, the common elder and the dwarf elder.

Look for thy reward  
Among the nettles at the *elder* tree,  
Which overshades the mouth of that same pit.

*Shakespeare, Titus Andronicus, ii. 4, letter.*  
**Elderly. adj.** Bordering upon, or showing signs of, old age.

I have a race of *elderly* people of both sexes at command, who can haul when I am deaf, and tread softly when I am giddy.—*Swift, Letter to Pope.*

**Eldership. s.** State, condition, or quality, of that which is an elder.

1. Seniority; primogeniture.

The world, while it had scarcity of people, underwent no other dominion than paternity and *eldership*.—*Sir W. Raleigh.*

That all should Alibech adore, 'tis true;  
But some respect is to my birthright due:  
My claim to her by *eldership* I prove.

*Dryden, Indian Emperor.*  
Nor were the *eldership*  
Of Artaxerxes worth our least of fears,  
If Memnon's interest did not prop his cause. *Race.*

2. Presbytery; ecclesiastical senate; kirk-session.

That controversy sprang up between Beza and Erasmus, about the matter of excommunications; whether there ought to be in all churches an *eldership*, having power to excommunicate, and a part of that *eldership* to be of necessity certain chosen out from amongst the laity. *Hooker, Ecclesiastical Polity, preface.*

**Eldest. adj.**

1. Oldest: (as a son or brother).  
We will establish our estate upon  
Our *eldest*, Malcolm, whom we name hereafter  
The prince of Cumberland.

*Shakespeare, Macbeth, i. 4.*  
The mother's and her eldest daughter's grace,  
It seems, had brib'd him to prolong their days.

*Dryden.*

2. Simply oldest. *Rare.*  
Their *eldest* historians are of suspected credit even amongst themselves.—*Bishop Stillington, Origines Sacre.* (Ord MS.)

**Elecompāne. s.** [Lat. ? *inula*, ? *helenium*, ? *campana*, ? *Campania*.] That the foregoing analysis is, in the main, a correct one, is shown by the following forms:—Fr. *cinule anisée*, *anisée*, *cinule campane*; Italian, *enula*, *enula campana*, *ella*; Spanish, *enula campana*, *alá*. In German, the *helen* in *helenium* takes the addition of *-t*, giving *alant*, *alantwurz*; the Danish being *aban*, *alandaröd*, and, by a natural catachresis, *St. Ellen's root*. Whether the *ele-* is the *-ula* in *in-ula*, or the *helen* in *helenium*, is uncertain.] Plant of the genus *Inula*, especially the *Inula Helenium*, the root of which, from its stimulant, pungent, or aromatic flavour, is used as a medicine or condiment.

The Germans have a method of candying *elecompāne* root like yinger, to which they prefer it, and call it German spice.—*Sir J. Hill, Materia Medica.*

In this [the bitter extractive] resides the tonic

property of *decumpane*.—*Pereira, Materia Medica*, p. 1884.

**Elected.** *adj.* Elected.

1. Chosen; taken by preference from among others.

You have here, lady,  
And of your choice, these reverend fathers,  
Yea, the elect of the land.

—*Shakespeare, Henry VIII.* II. 4.

2. Chosen to, as opposed to actually invested with, an office: (*postpositive*).

The bishop elect takes the oath of supremacy, canonical obedience, and against simony; and then the dean of the arches reads and subscribes the sentences.—*Asplife, Purgatory Juris Canonici*.

3. In *Theology*. Chosen as a follower of Christ, or member of the kingdom of heaven.

A vicious liver, believing that Christ died for none but the elect, shall have attempts made upon him to reform and amend his life.—*Hammond*.  
None I have chosen of peculiar grace,  
Elect above the rest; no is my will.

—*Milton, Paradise Lost*, III. 183.

**Elected.** *v. a.* [Lat. *electus*, pass. part. of *eligere* = choose, pick out, select.]

1. Choose for any office or use; take in preference to others.

Henry his son is chosen king, though young;  
And Lewis of France, elected first, beguiled. *Daniel*.  
Such as thou hast solemnly elected,  
With gifts and graces eminently adorned,  
To some great work, *Milton, Samson Agonistes*, 674.  
They have been, by the means that they elected,  
Carried beyond the end that they designed.—*Boyle, Essay on Scripture*, (Ord. 318.)

I would not have Christians neglect the fountain for the streams, and unwisely, as well as unthankfully, elect to read God's word rather in any book than his own.—*Ibid.*, p. 114. (Ord. 318.)  
This prince, in gratitude to the people, by whose consent he was chosen, elected a hundred senators out of the commons.—*Swift*.

2. In *Theology*. Select as an object of eternal mercy.

Nor can they think, with the Sabellians, that reprobation is only God's passing by those whom he does not elect. *Bishop Horne, Exposition of the Thirty-nine Articles of the Church of England*, art. 17.

**Elector.** *s.* One who has the power of electing.

You cannot go on further to entitle him a free electant too.—*Search, On Freewill, Foreknowledge*, &c. p. 53: 1703.

[Todd, after remarking that this is a word not likely to be used, adds that the same author has used *electancy*.]

**Electio.** *s.* Choice.

1. Act of choosing or selecting one or more from a greater number for any use or office; choice.

If the election of the minister should be committed to every several parish, do you think that they would choose the bestest?—*Archbishop Whitgift*.

I was sorry to hear with what partiality, and popular heat, elections were carried in many places.—*Bikon Basilike*.

Him, not thy election,  
But natural necessity, begot.

—*Milton, Paradise Lost*, I. 764.

Ascharity is, nothing can more increase the lustre and beauty than a prudent election of objects, and a fit application of it to them.—*Bishop Sprat*.

Since the late dissolution of the club, many persons put up for the next election.—*Addison, Spectator*.

2. Power of choice.

For what is man without a moving mind,  
Which hath a judicious wit, and choosing will?  
Now, if God's power should her election blind,  
Her motions then would cease, and stand all still.

—*Sir J. Davies, Immortality of the Soul*.

3. Discernment; distinction; discrimination.

The discovering of these colours cannot be done but out of a very universal knowledge of things; which no clearest men's judgement and election, as it is the less apt to slide into error.—*Bacon*.

In favour, to use men with much difference and election is good: for it maketh those preferred more thankful, and the rest more officious.—*Id.*

4. In *Theology*. Predetermination of God by which some were selected for eternal life.

The elect are about absolute election to eternal life,  
804

some enthusiasts entertaining, have been made remiss in the practice of virtue. *Bishop Atherbury*.

**Electing.** *s.* (often used *adjectivally*.)

Practice of soliciting votes at the election of a member for parliament; any business connected with such election. Noted by Johnson as a *low* word.

Farwell distress, and gloomy cares!

A merrier theme my muse prepares:

For lo! to save us, on a sudden,

In shape of porter, beef, and pudding,

Though late, electioneering comes!

—*Warburton, Newman's Verba*, 1703.

While Montague suffered the mortification of finding that his empire over the city was less absolute than he had imagined, Wharton, notwithstanding his acknowledged preeminence in the art of electioneering, underwent a succession of defeats in boroughs and counties for which he had expected to name the members.—*Macaulay, History of England*, ch. xxiv.

**Elective.** *adj.*

1. Regulated or bestowed by election or choice.

I will say positively and resolutely, that it is impossible an elective monarchy should be so free and absolute as an hereditary.—*Bacon*.

The last change of their government, from elective to hereditary, has made it seem hitherto of less force, and unfit for action abroad.—*Sir W. Temple*.

If, indeed, we may place reliance on Matthew Paris, Archbishop Hubert on the occasion (the accession of John) declared in the most explicit terms that the crown was elective, giving to the blood royal no other preference than their merit might challenge.—*Hollam, View of the State of Europe during the Middle Ages*, pt. II. ch. viii.

2. Exerting the power of choice.

To talk of compelling a man to be good, is a contradiction; for where there is force, there can be no choice; whereas all moral goodness consisteth in the elective act of the understanding will.—*Grice, Cosmologia Sacra*.

3. Applied in *Chemistry* to substances incapable of choice, but which are not only able to enter into combination with one another, but have their power to do so regulated by what takes the appearance of preference.

Sulphuric acid, in like manner, separates baryta from nitric acid. Combination and decomposition occur in each of these cases; combination of sulphuric acid with ammonia, . . . of baryta with sulphuric acid. These are examples of what Bergmann calls single elective affinity—*elective*, because a substance manifests, as it were, a choice for one of two others, uniting with it by preference and to the exclusion of the other. Many of the decompositions that occur in chemistry are instances of single elective affinity. *Turner, Elements of Chemistry*, p. 131.

Nevertheless, in 1773, the Swedish chemist Bergman, pursuing still further this subject of chemical affinities, and the expression of them by means of tables, returned again to the old Newtonian term; and designated the disposition of a body to combine with one rather than another of two others as *elective* attraction. And as his work on *elective* attractions had great circulation and great influence, this phrase has obtained a footing by the side of affinity, and both one and the other are now in common use among chemists.—*Whewell, History of Scientific Ideas*, II. 19.

*Elective* affinity denotes the order of preference, so to speak, in which the several chemical substances chosen to combine, or really, the gradation of attractive force infused by Almighty Wisdom among the different objects of nature, which determines perfect uniformity and identity in their compounds amidst infinite variety of combination.—*Encyc. Dictionary of Arts, Manufactures, and Mines*.

**Electively.** *adv.* In an elective manner; by choice; with preference of one to another.

How or why that should have such an influence upon the spirits, as to drive them into these muscles electively, I am not subtle enough to discern.—*Ray, Wisdom of God manifested in the Works of the Creation*.

They work not electively, or upon proposing to themselves an end of their operations.—*Grew*.

**Electors.** *s.* One who elects.

a. As the member of an ordinary English constituency.

The inhabitants of Edinburgh complained . . . that the representation of this capital city . . . with upwards of one hundred thousand inhabitants, was returned by thirty-three electors.—*T. Erskine May, Constitutional History of England*, I. 298.

b. As a prince of the old German empire, who had a vote in the choice of an em-

peror; in German *Churfurst* = choosing-prince.

c. From the new world her silver and her gold  
Came, like a tempest, to confound the old;  
Feeding with them the brist'd electors' hopes.  
Alone she gave us emperors and popes. *Waller*.  
Heidelberg, just beginning to rise again from its ruins, was again sacked, the pious citizens butchered, their wives and daughters foully outraged. The very chima of the churches were stained with blood: the pyxes and crucifixes were torn from the altars: the tombs of the ancient electors were broken open: the corpses, stripped of their coverings and ornaments, were dragged about the streets.—*Macaulay, History of England*, ch. xv.

**Electoral.** *adj.* Having the dignity, rank, or estate of an elector.

Such are the subdivisions in favour of the electoral and other princes in the empire.—*Burke, Speech on Economical Reform*.

**Electoral.** *s.* Territory of an elector. Electorate the commoner word.

Not to trouble one another, or any thing to them belonging as *electoralities*, principalities, subjects, towns, villages.—*Treaty in Reliquie Wolloniense*, torn. 1620, p. 533.

**Electorate.** *s.* See preceding entry.

He has a great and powerful king for his son-in-law; and can himself command, when he pleases, the whole strength of an electorate in the empire.—*Addison, Frecholder*.

**Electress.** *s.* Same as Electress.

In the end of his [the elector of Brandenburg's] life, the electress had gained great credit.—*Bishop Burnet, History of his own Time*, 1684.

**Electoralship.** *s.* Rank or condition of an elector.

These princes electors, being joined and bound into the emperor in a double confederation, as well for their electoralship as in respect of the kingdom of Bohemia, could not otherwise do.—*Knutell, History of the Turks*, 1283 A. (Ord. 318.)

**Electress.** *s.* Wife of a (prince) elector.

The net of parliament settled the crown on the electress Sophia and her descendants, being protestants.—*Burke*.

**Electric.** *adj.* [Lat. *electricum*; Gr. *ἤλεκτρον* = amber, which, at an early date, was observed, when rubbed by dry silk, cloth, or the like, to have acquired the power of attracting light bodies.] Having properties identical with, or referable to, the same force as that developed by friction in amber, the class of phenomena thus reducible being those of that department of physics called electricity; belonging to, constituting, or produced by, Electricity.

By electric bodies do I conceive not such only as take up light bodies, in which number the ancients only placed flint and amber; but such as, conveniently placed, attract all bodies palpable.—*Sir T. Browne, Vulgar Errors*.

If a piece of white paper, or a white cloth, or the end of one's finger, be held at about a quarter of an inch from the glass, the electric vapour, excited by friction, will, by dashing against the white paper, cloth, or finger, be put into such an agitation as to emit light.—*Sir I. Newton, Opticks*.

(For modern examples see the entries connected with this term in general.)

**Electric.** *s.* See extract.

The non-conductors readily exhibiting their electricity by friction, are often called *electrics*, in opposition to the metals and other good conductors which are called *non-electrics*. The *electrics*, from their power of preventing the passage or transfer and escape of electricity, are also sometimes called *insulators*.—*Brande, Manual of Chemistry*, p. 150.

**Electrical.** *adj.* Same as *Electric*. In the second extract both terms are found in the same page.

If that attraction were not rather *electric* than magnetic, it was wonderful what Helmont delivered concerning a glass, wherein the magnetism of London was prepared, which retained an attractive quality.—*Sir T. Browne, Vulgar Errors*.

An electric current appears to have a magnetic action in a direction cutting its own at right angles: . . . this, when conducting an electrical current, is, to all intents and purposes, a magnet.—*Grove, The Correlation of Physical Forces*.

The form in -ic (*electric*), notwithstanding the frequency of the adverb in -ally, is likely to prevail. Over and above the analogies of *magnetic* and *galvanic*, which are far commoner than *magnetical* and *galvanical*, the familiar term *electric* (no one

says electrical) telegraph favours the shorter and more correct form.

**Electrically, adv.** In an electric or electrical manner.

If in the terse form of popular resolutions public virtue shall circulate its principles, the instruction the spirit will be electrically felt by every man.—*Cartwright, State of the Nation*, p. 100.

Inasmuch as electrified bodies are found to present themselves in two opposite or distinct states, it has been assumed that the electric fluid exists in all forms of matter . . . that under ordinary circumstances it is in a state of equilibrium or quiescence; and that when this state is disturbed, so as to occasion either its redundancy or deficiency, the bodies then become electrically excited; upon this view of the cause of electricity, which originated with Franklin, the opposite states have been termed positive and negative.—*Brande, Manual of Chemistry*, p. 145.

**Electrician, s.** Investigator of the phenomena of electricity; manipulator of electric instruments.

I cannot enter into this particular subject without first settling a dispute amongst electricians.—*Wolton, in Philosophical Transactions*, ii. 309: 1750.

These contain more grand . . . views . . . than any found in the works of modern electricians.—*Whewell, History of Scientific Ideas*, b. v. ch. i. § 4.

**Electricity, s.** Department in physics which deals with electric phenomena.

The mechanical theory of electricity invented by Dr. Franklin is believed by some philosophers not so well to explain the various phenomena of electricity, as may be accomplished by an hypothesis of the existence of two electric fluids diffused together, and strongly attracting each other; one of them to be called vitreous, and the other resinous, electricity. The latter opinion I am inclined to espouse.—*Darwin, Philosophy*, p. 310.

The science of electricity is of modern origin. The knowledge of the ancients was confined to the fact that amber and lycurium (supposed to be tourmaline) acquired the property of attracting light bodies . . . Gilbert, of Colchester, detected the same property in a variety of other substances, and thereby laid the foundation of the science of electricity. . . . Symmer added the important fact that friction develops both kinds of electricity at the same time, an observation which led to the theory of the two electric fluids as now understood. These discoveries, added to the confirmation of Franklin's opinion as to the identity of the cause of lightning and electricity, fixed the attention of scientific men upon the new study, and soon acquired for it a high rank among the sciences.—*Turner, Elements of Chemistry*, p. 80.

**Electrification, s.** Act of electrifying.

Purging at Bath is to be the next step; and, in case of necessity, even electrification is to be tried.—*Lord Chesterfield, Miscellaneous*, iv. 123: ed. Maty, letter dated in 1752.

**Electrified, part. adj.** Rendered electric.

(For example) extractum Electrificatum.

**Electrify, v. a.**

1. Render electric; communicate electricity. The explosion of a cannon in St. James's park, is observed to electrify the glass of the windows of the Treasury.—*Stephen, Hales, Considerations on the Causes of Earthquakes*, p. 22: 1750.

2. Used metaphorically (the application running through most of its congeners). Shock.

If the sovereign were now to immure a subject in defiance of the writ of *habeas corpus*, or to put a conspirator to the torture, the whole nation would be instantly electrified by the news. In the middle ages the state of society was widely different. Rarely and with great difficulty did the wrongs of individuals come to the knowledge of the public.—*Mackay, History of England*, ch. i.

**Electrization, s.** Act of becoming, or of being rendered, electric.

When a substance, such as sulphuret of antimony, is electrified, at the instant of electrization, it becomes magnetic in directions at right angles to lines of electric force; at the same time it becomes heated to an extent greater or less according to the intensity of the electric force.—*Grove, The Correlation of Physical Forces*.

**Electrize, v. a.** Endue with electricity; invest with electric force.

An experiment which I published in 1843, tends, I think, to illustrate this, and in some degree to show the character of the motion impressed upon the molecules of a magnetic metal at the period of magnetization. A tube filled with the liquid in which the magnetic oxide of iron had been prepared, and terminated at each end by plates of glass, was surrounded by a coil of coated wire. To a spectator looking through this tube a flash of light was perceptible whenever the coil was electrized, and less light was transmitted when the electrical current

ceased, showing a symmetrical arrangement of the minute particles of magnetic oxide while under the magnetic influence. . . . To many, however, of the cases we have been considering, the term correlation may be applied in a more strict accordance with its original sense; thus, with regard to the forces of electricity and magnetism in a dynamic state, we cannot electrize a substance without magnetizing it, we cannot magnetize it without electrifying it. Each molecule, the instant it is affected by one of these forces, is affected by the other; but, in transverse directions, the forces are inseparable and mutually dependent—correlative, but not identical.—*Grove, The Correlation of Physical Forces*.

In the following extract the construction is doubtful; electrize meaning either 'render something electric,' or 'act as an electric body.'

He [Dr. Lister, in 1680] did not doubt that several things would electrize.—*History of the Royal Society*, iv. 305.

**Electrode, s.** [Gr. *hlek* way; as the *o* is short, the *e* with which the new-made word under notice ends suggests a wrong pronunciation.] Direction of an electric current. See extract.

Both Davy, Croxthaus, Riffault, and Chompré, ascribed electrical decomposition to the action of the poles. . . . Faraday . . . showed that the polarity must be considered as residing not only in what had till then been called the poles, but at every point of the circuit. He ascribed electro-chemical decomposition to internal forces, residing in the particles of the matter under decomposition, as to external forces, exerted by the poles. Hence he shortly afterwards proposed to reject the word poles altogether, and to employ instead the term *electrode*, meaning the doors or passages (of whatever surface formed) by which the decomposed elements pass out. What have been called the positive and negative poles he further termed the anode and cathode; and he introduced some other changes in nomenclature connected with these.—*Whewell, History of Scientific Ideas*, b. v. ch. i. § 4.

**Electrolysis, s.** [Gr. *hlek* resolution in the sense of breaking up, as in *analysis*.] Analysis, or decomposition, effected by means of electricity.

The transmission of the voltaic current in liquids is viewed by Croxthaus as a series of chemical affinities acting in a definite direction; for instance, in the *electrolysis* of water, i. e. its decomposition when placed between the poles or electrodes of a voltaic battery, a molecule of oxygen is supposed to be displaced by the excited attraction of the neighbouring electrode; the hydrogen liberated by this displacement unites with the oxygen of the contiguous molecule of water; this, in turn, liberates its hydrogen, and so the current continues, being nothing else than this molecular transmission of chemical affinity.—*Grove, The Correlation of Physical Forces*.

**Electrolyte, s.** Substance capable of being analyzed, or decomposed, by electricity.

This may be extended to all liquids capable of being decomposed by the electric current, thence called *electrolytes*. . . . What the exact nature of the transference of chemical power across an *electrolyte* is, we at present know not, nor can we form any more definite idea of it than that given by the theory of Croxthaus.—*Grove, The Correlation of Physical Forces*.

**Electrolytic, adv.** Consisting in electrolysis.

Whenever sulphur is obtained by primary *electrolytic* action . . . it is evolved at the . . . positive pole.—*Brande, Manual of Chemistry*, p. 221.

**Electrometer, s.** [Gr. *hlek* measure.] Instrument for measuring the intensity of an electric current.

To commence, then, with electricity as an initiating force, we set motion directly produced by it in various forms; for instance, in the attraction and repulsion of bodies, evidenced by mobile *electrometers*, such as that of Coulter's, where large masses are acted on.—*Grove, The Correlation of Physical Forces*.

Lastly, motion may be again reproduced by the forces which have emanated from motion; thus, the divergence of the *electrometer*, the revolution of the electrical wheel, the deflection of the magnetic needle, are, when resulting from frictional electricity, palpable movements reproduced by the intermediate modes of force, which have themselves been originated by motion. *Ibid.*

**Electrophorus, s.** [Gr. *hlek* bear.] Instrument for accumulating, or condensing, electric (electro-galvanic) force.

The *electrophorus* is another contrivance of Volta's which acts by induced electricity. It consists essentially of two parts; one being a flat cake of resin, . . . and the other a disk of brass . . . supplied with a

glass handle, &c.—*Turner, Elements of Chemistry*, p. 70.

**Electroscope, s.** [Gr. *hlek* = see, spy, look out for, observe.] Instrument for ascertaining the existence, character, or degree (intensity) of electric force.

It is very important, in experiments in electricity, to possess easy methods of discovering when a substance is electrified, of ascertaining its intensity or the degree to which it is excited, and distinguishing the kind of excitement. The means for effecting these purposes are called *electroscopes* and *electrometers*; the latter denoting the intensity of the excitement, the former merely indicating excitement, and the electrical state by which it is produced. The term *electrometer*, however, is often indiscriminately applied to all such instruments, since the methods of ascertaining the kind of excitement give, at the same time, some idea of its intensity.—*Turner, Elements of Chemistry*, p. 80.

*Electroscopes* and *electrometers* are instruments by which changes in the electrical states of bodies are rendered evident, and their intensities measured.—*Brande, Manual of Chemistry*, p. 151.

If two such discs in close proximity be connected with a delicate *electroscope*, and then suddenly separated, the *electroscope* is affected, showing that the reciprocal radiation, from surface to surface, has produced electrical force.—*Grove, The Correlation of Physical Forces*.

**Electroscopic, adj.** Relating to the electroscope.

Several simple *electroscopic* methods have already been indicated.—*Turner, Elements of Chemistry*, p. 80.

**Electrotype, s.** (often used adjectively.) Stamp obtained by the deposition of a film of metal upon a relief by electro-galvanism.

The metallic precipitations . . . as deposited upon the negative electrode, have been resorted to for the purpose of taking impressions or copies of seals, medals, copper-plates, &c., forming what has been termed *electrotypes*; and a new branch of art has thus arisen, which has been termed *electro-metalurgy*. . . . *Electrotype* processes have now, to a great extent, superseded the old methods of plating.—*Brande, Manual of Chemistry*, pp. 217, 20.

Jacobi's Galvano-plastik, Smee's, and also Shaw's, electro-metalurgy, Walker's *electrotype* manipulation . . . present us the different names under which the art is known; and from whence it is gathered that metals may become, as it were, plastic under the agency of galvanic electricity, and may be worked and moulded into form.—*Vin, Dictionary of Arts, Manufactures, and Mines, Electro-metalurgy*. (Hunt's edition.)

**Electrum, s.** [see Electric.] Amber was but one of the meanings of this word. It also meant an alloy of gold and silver.

The ancient *electrum* had in it a fifth of silver to the gold, and made a compound metal, as fit for most cases as gold, and more resplendent, and more qualified in some other properties; but then that was easily separated.—*Hutton, Natural and Experimental History*, iv. 708. (3rd Ed.)

**Electuary, s.** [Johnson, after giving the Low Latin *electuarium* as a derivation, by adding that it 'is now written *electuary*,' suggests the notion that he approved of the older term. Todd, after stating that the former word is found in Huloet, and that the old French has *electuaire*, adds that 'electuary has since been offered in the History of Medical Transactions, but has not been followed.' That *electuary* is the commoner word is beyond doubt. It is, however, in a fair way of being itself superseded by Confection.] Medicine made up, with sugar, to the consistence of honey.

*Electuaries* made up with honey or syrup, when the consistence is too thin, ferment; and when too thick, candy. By both which the ingredients will be altered or impaired.—*Quincy*.

We meet with divers *electuaries*, which have no ingredient, except sugar, common to any two of them.—*Boyle*.

The London Pharmacopoeia refers those articles which were formerly called *electuaries* to confections.—*Hager, Medical Dictionary*, in voce. (See also extract under Confection, 3.)

**Eleemosynary, adj.** See Alms.

1. Given in charity, or as alms; constituting, consisting in, or having the nature of, alms.

He had done several *eleemosynary* cures amongst

them, for they are generally very poor.—*Bishop Sprat, History of the Royal Society*, p. 200.

## 2. Living upon alms; depending upon charity.

In the accounts of Mankoto priory, near Coventry, in the year 1450, it appears that the *elemosynary* boys, or choristers, of that monastery, acted a play.—*T. Warton, History of English Poetry*, ii. 364.

## Elemosynary. s. One who subsists upon alms or charity; object of charity. Rare.

Living as an *elemosynary* upon a perpetual contribution from all and every part of the creation.—*South, Sermons*, iii. s. 1.

It is little better than an absurdity, that the cause should be an *elemosynary* for its subsistence to its effects, as a nature posterior to and dependent on itself.—*Glanville, Neoplaton Scientificæ*.

## Elegance. s. Beauty characterized by grace, propriety, delicacy, and refinement.

On the last quality of style to be noticed—*Elegance* or beauty—it is the less necessary to enlarge, both because the most appropriate and characteristic excellence of the class of compositions here treated of, is that energy of which I have been speaking; and also, because many of the rules laid down under that head, are equally applicable with a view to *elegance*. The same choice, number, and arrangement of words, will, for the most part, conduce both to energy, and to beauty. The two qualities, however, are by no means undistinguishable; a metaphor, for instance, may be apt, and striking, and consequently conducive to energy of expression, even though the new image, introduced by it, have no intrinsic beauty, or be even unpleasant; in which case, it would be at variance with *elegance*, or at least would not conduce to it. *Elegance* requires that all homely and coarse words and phrases should be avoided, even at the expense of circumlocution; though they may be the most apt and forcible that language can supply. And *elegance* implies a smooth and easy flow of words in respect of the sound of the sentences; though a more harsh and abrupt mode of expression may often be, at least, equally energetic. Accordingly, many are generally acknowledged to be forcible writers, to whom no one would give the credit of *elegance*; and many others, who are allowed to be elegant, are yet by no means reckoned among the vigorous and energetic. When the two excellencies of style are at variance, the general rule to be observed by the orator is to prefer the energetic to the elegant. Sometimes, indeed, a plain, or even a somewhat homely expression, may have even a more energetic effect, from that very circumstance, than one of more studied refinement; since it may convey the idea of the speaker's being thoroughly in earnest, and anxious to convey his sentiments, where he uses an expression that can have no other recommendation; whereas a strikingly elegant expression may sometimes convey a suspicion that it was introduced for the sake of its *elegance*; which will greatly diminish the force of what is said. The appearance of a too uniform *elegance* or stateliness of style, is apt to cloy; like a piece of music without any discords.—*Whately, Elements of Rhetoric*, pt. iii. ch. iii. § 1, 2.

## Elegancy. s.

### 1. Same as Elegance.

St. Augustine, out of a kind of *elegancy* in writing, makes some difference.—*Sir W. Raleigh, History of the World*.

These questions have more propriety, and *elegancy*, understood of the old world.—*Bishop Burnet*.

### 2. Anything that pleases by its elegance; (in this sense it is used in the plural).

The beauty, ornament, and *elegancies* of life.—*Jeremy Taylor, A Collection of Humane Cases*, p. 85.

My compositions in gardening are altogether Pindarick, and run into the beautiful wildness of nature, without the nice *elegancies* of art.—*Spectator*.

## Elegant. adj. [Lat. elegans, -antis, whence elegantia; Fr. elegant and élégance.] Pleading by the minute beauties, or by the absence of faults, especially those of grossness or coarseness; having grace, propriety, delicacy, and refinement.

Eye, now I see thou art exact of taste,  
And elegant of sapience no small part;  
Since to each meaning savour we apply,  
And palate call judicious.

*Milton, Paradise Lost*, ix. 1019.  
Trifles themselves are elegant in him.  
There might'st thou find some elegant retreat,  
Some hirsling senator's deserted seat.

*Johnson, London*,  
Polite with candour, elegant with ease.  
*Pope*.

## Elegantly. adv. In an elegant manner.

They describe her in part finely and elegantly, and in part gravely and sententiously.—*Bacon*.

Now read with them those organic arts which enable men to discourse and write periphrastically, elegantly, and according to the fittest style of lofty, mean, or lowly.—*Milton, Tractate on Education*.

## Elegiac. adj.

1. Having the character of the metre consisting of hexameters and pentameters alternately, as written by Mimnermus and other early Greek poets, and applied to poetry of a tender, plaintive, and even melancholy character: (as opposed to the heroic metre, consisting solely of hexameters, of Homer and the epic poets.) [In English, the stanza of four lines, each line containing five accents and ten syllables, with alternate rhymes, is usually called elegiac; though, as suggested by the extract from Johnson, with doubtful propriety. Waller's Panegyric and Dryden's Annus Mirabilis are by no means elegiac; still less Davenant's romantic epic of Gondibert and Sir T. Davies's Immortality of the Soul. The form in which the lines are printed, which is that of the elegiacs of the classical writers, has, perhaps, as much to do with it as the subject.]

Another thing yet more considerable is conduct, and design, in whatever kind of poetry, whether the epic, the dramatick, the lyric, the elegiac.—*Philips, Theatrum Poeticum*, pref.

His civil among the Latin poets was Milton's favourite, appears not only from his *epic* but his *heavenly* poetry.—*T. Warton, Milton's smaller Poems*, pref.

Why Hammond, or other writers, have thought the quatrain of ten syllables *elegiac*, it is difficult to tell.—*Johnson, Lives of the Poets*, Hammond.

Elegy speaks her own proper native language, the unaffected plaintive language of the tender passions; the true *elegiac* dignity and simplicity are preserved and united, the one without pride, the other without meanness.—*Lord Chesterfield, Preface to Hammond's Elegies*.

### 2. Mourning; sorrowful.

Let *elegiac* lay the woe relate,  
Soft as the breath of distant flutes. *Gay, Trivia*.

### 3. In Prosody, applied to Latin or Greek metres. Alternating in hexameters and pentameters.

I am . . . inclined to think that Jonston's Psalms, all of which are in *elegiac* metre, do not fall short of those of Buchanan either in elegance of style or correctness of Latin.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. v.

## Elegiac. s. Elegiac verse.

His Latin elegiacs are pure.—*T. Warton, History of English Poetry*.

## Elegiac. s. Writer of elegiacs.

The great fault of these *elegiacs* is, that they are in despair for grief that give the sensible part of mankind very little pain.—*Goldsmith, Vicar of Wakefield*.

## Elegiographer. s. [Gr. γράφω = write.]

Writer of elegiacs. Rare.

*Elegiographer*, one who writes mourning songs.—*Cockerus*.

## Elegist. s. Same as Elegiacist; (conveniently limited to a writer of elegies).

Our *elegist*, and the chroniclers, impute the crime of withholding so pious a legacy to the advice of the king of France.—*T. Warton, History of English Poetry*, i. 108.

## Elegit. s. [Lat.] In Law. Writ so called, giving an alternative to the person who applies for it.

It is generally known, a judgement being obtained or acknowledged for any debt when the statute of Westm. 2. 13 Ed. i. c. 18, one half of the debtor's land is to be delivered unto the creditor until the obligation is satisfied, under a writ called *Elegit*, and this writ has been ever since the ordinary assurance of the land, and the great foundation of general credit in the nation.—*Burke, Tracts on the Popery Laws*.

## Elegy. s.

### 1. Poem of an elegiac character.

He lings odes upon hawthorns, and elegies upon brambles, all forsooth defying the name of Roman.—*Shakespeare, As you like it*, iii. 2.

So on Meander's banks, when death is nigh,  
The mourning swan sings her own elegy. *Dryden*.

A versification is desirable, which, by indulging a free and unobscured expression, may admit of that simplicity, which *elegy* requires.—*Shenstone, Preface to his Elegies*.

Johnson has selected the *elegy* on Craschaw as the finest of Cowley's works.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. v.

## 2. Latin poem in alternate hexameters and pentameters.

Holland stood at the head of Europe in this line of poetry [Latin versification]. Grotius has had the reputation of writing with spirit, elegance, and imagination. But he is excelled by Helmsius, whose *elegies* still more than his hexameters may be ranked high in modern Latin.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. v.

## Element. s. [Lat. clementum.]

### 1. First or constituent principle of anything.

If nature should interrupt her course, those principal and mother elements of the world, wherof all things in this lower world are made, should lose the qualities which now they have.—*Hooker, Ecclesiastical Polity*.

A man may rationally retain doubts concerning the number of those ingredients of bodies, which some call *elements*, and others principles.—*Boyle*.

The ancients considered fire, air, water, and earth, as simple substances, essential to the constitution of all terrestrial beings. This hypothesis, evidently incompatible with modern chemical discovery, may be supposed to correspond, however, to the four states in which matter seems to exist; namely, 1. the uncombustible powers or fluids—caloric, light, electricity; 2. ponderable gases, or elastic fluids; 3. liquids; 4. solids. The three elements of the alchemists—salt, earth, mercury—were, in their sense of the word, mere phantasms. In modern science the term *element* signifies merely a substance which has not yet been resolved by analysis into any simpler form of matter, and it is therefore synonymous with undecomposed.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

### 2. The four elements usually so called are Earth, Fire, Air, Water, of which our world is composed: (when used alone, element commonly means the air; the pure or simple element being water, as opposed to fermented or distilled liquors).

The king is but a man: the violet smells to him as it doth to me; and the element shows to him as it doth to me.—*Shakespeare, Henry V.* iv. 1.

My dearest sister, fare thee well;  
The elements be kind to thee well;  
*Id., Antony and Cleopatra*, iii. 2.

The king  
Contending with the fretful elements,  
Bids the wind blow the earth into the sea,  
Or swell the curled waters.—*Id., King Lear*, iii. 1.

The heavens and the earth will pass away,  
And the elements melt with fervent heat.—*2 Peter*, iii. 10.

Here be four of you were able to make a good world; for you are as differing as the four elements.—*Bacon*.

He from his flaming ship his children sent,  
To perish in a milder element. *Waller*.

We are informed by Cassian, that the common measure (of their food) in twenty-four hours, was about twelve ounces, with more *element* for drink. He shows the great benefit of a low diet, living altogether on vegetable food and pure *element*. *Chevre, Essay on Health and long Life*, p. 30-32. (Ord. MS.)

### 3. Proper habitation or sphere of anything: (as water of fish; whence, 'out of one's element,' applied to persons dealing with unfamiliar matters).

We are simple men; we do not know she works by charms, by spells, and such daubery as is beyond our *element*.—*Shakespeare, Merry Wives of Windsor*, iv. 2.

Our torments may, in length of time,  
Lacquer our *elements*. *Milton, Paradise Lost*, ii. 574.

### 4. Ingredient; constituent part.

Who set the body and the limbs  
Of this great sport together, as you guess?  
One sure that promises no *element*  
In such a business. *Shakespeare, Henry VIII.* i. 1.

### 5. First rudiments of literature or science.

With religion it breathes as with *element* sciences; the first delivery of the elements thereof must, for like consideration, be framed according to the weak and tender capacity of young beginners.—*Hooker, Ecclesiastical Polity*.

Every parish should keep a petty schoolmaster, which should bring up children in the first *elements* of letters.—*Spenser, View of the State of Ireland*.

We, when we were children, were in bondage under the *elements* of the world.—*Galatians*, iv. 3.

There is nothing more pernicious to a youth, in the *elements* of painting, than an ignorant master.—*Dryden*.

Crushed was Napoleon by the northern Thor,  
Who knock'd his army down with his hammer,  
Stopp'd by the *elements*, like a whaler, or  
A blundering novice in his new French grammar.

*Rymer, Began*, 61.  
When Brummell was obliged to retire to France, he knew no French, and having obtained a grammar for the purpose of study, our friend George Davies was asked what progress Brummell had

made in French; he responded, that Brummell had been copied, like Buonaparte in Russia, by the elements. I have put this pun into Byron, which is 'a fair exchange and no robbery' for Europe made his fortune at several dinners (as he owned himself) by repeating occasionally, as his own, some of the buffoneries with which I had encountered him in the morning.—*Byron, Diary*, 1821.

Another form of Ignoratio Elenchi, which is also rather the more servicable on the side of the respondent, is, to prove or disprove some part of that which is required, and dwell on that, suppressing all the rest. Thus, if a university is charged with cultivating only the mere elements of mathematics, and in reply a list of the books studied there is produced, should even any one of those books be not elementary, the charge is in fairness refuted; but the sophist may then earnestly contend that some of those books are elementary; and thus keep out of sight the real question, viz. whether they are all so.—*Whately, Logic*.

[Alphabet is the name given to the series of letters used in different countries at different times. The term is borrowed from the Greek language, in which Alpha, Beta, are the first two letters; or if we go a step farther back, we should derive the word from the Hebrew, which gives to the corresponding letters the names Aleph, Beth. Thus the formation of the word is precisely analogous to that of our familiar expression, the A, B, C; and some writers have found a similar origin for the Latin name given to the letters, viz. *elementa*, which, it must be allowed, bears an extraordinary similarity in sound to the three liquids, l, m, n; but to make this derivation satisfactory, it should be proved that these letters were at one time the leaders of the alphabet, for otherwise it would be difficult to account for the selection of a name from them in preference to the rest.—*Key, The Alphabet*.]

6. In *Theology*. Bread and wine of the Eucharist.

**Element**. *v. a.*

1. Compound of elements.

Fond creature! thou art *elemented* and organed for other apprehensions, for a lower commerce of perception: such immediate displays of divinity infinitely transcend the analogy of thy order, and the immoderate glory of such a revelation would but absorb thy soul.—*Marygugham, Discourses*, s. p. 83: 1681.

2. Constitute; make as a first principle.

Dull sublimity lover's love,  
Whose soul is sense, cannot admit  
Absence, because it doth remove  
Those things which *element* it.

*Jonnes, Poems*, p. 41.

His very soul was *elemented* of nothing but sadness.—*L. Walton, Life of Jonnes*.

**Elemental**. *adj.*

1. Produced by some of the four elements.

God made  
The firmament, expanse of liquid, pure,  
Transparent, *elemental* air.  
*Milton, Paradise Lost*, vol. 233.  
If dusky spots are dyed on his brow,  
And streak'd with red a troubled colour show;  
That sullen mixture shall at once declare  
Winds, rain, and storms, and *elemental* war.

The heavens, and the ample or *elemental* bodies,  
As the earth, the water, and the air.—*Bishop Pearson, Exposition of the Creed*, art. 1.  
Soft yielding minds to water glide away,  
And sip, with nymphs, their *elemental* tea. *Pope*.

2. Arising from first principles.

Leeches are by some accounted poison not properly, that is, by temperamental contrariety, occult form, or so much as *elemental* repugnancy; but inwardly taken, they fasten upon the veins, and occasion an effusion of blood.—*Sir T. Browne*.

3. Rude; elementary.

The druids are said to be very expert in astronomy, in geography, and in all parts of mathematical knowledge. And authors speak, in a very exaggerated strain, of their excellence in these, and in many other sciences. Some *elemental* knowledge, I suppose, they had; but I can scarcely be persuaded that their learning was either deep or extensive.—*Burke, Abridgement of English History*, l. 2.

**Elementality**. *s.* Composition; combination of ingredients.

By this I hope the *elementality* (that is, the universality) of detraction, or disparagement, (or what else you will call this 'mal dire'), is out of dispute.—*Whitlock, Observations on the present Manners of the English*, p. 480: 1824.

**Elementally**. *adv.* In an elemental manner; after the manner of an element.

Those words taken circumscriptively, without regard to any precedent law of Moses, are as much against plain equity and the mercy of religion, as those words of 'Take out this is my body,' *elementally* understood, are against nature and sense.—*Christian Religion's Appeal to the Bar of Reason*, ch. xv. (Ord M8.)

**Elementarity**. *s.* Simplicity of nature; absence of composition; being uncompounded.

A very large class of creatures in the earth, far above the condition of *elementarity*.—*Sir T. Browne, Vulgar Errors*.

**Elementary**. *adj.*

1. Uncompounded; having only one principle or constituent part.

All rain water contains in it a copious sediment of terrestrial matter, and is not a simple *elementary* water.—*Ray*.

The *elementary* salts of animals are not the same as they appear by distillation.—*Arbuthnot, On the Nature and Choice of Aliments*.

2. Initial; rude.

Your courtier *elementary* is one but newly entered, or as it were in the alphabet.—*R. Jonnes, Cynthia's Revels*.

It is probable, that before the time of Aristotle there were *elementary* treatises of geometry, which are now lost.—*Reid, Inquiry into the human Mind*.

3. Of, or belonging to, the elements.

The harmony of heaven and the elements was put out of tune, in the *elementary* part of the world, by the sin of man.—*Harmer, Translation of Job's Sermon*, p. 257: 1787.

Some luminous and fiery impress us in the *elementary* region.—*J. Spencer, Discourse concerning Prædilection*, p. 33.

**Elemented**. *part. adj.* Consisting of elements.

Whether any one such body be met with, in those said to be *elemented* bodies, I now question.—*Boyle*.

**Elemi**. *s.* See extracts

This drug is improperly called gum *elemi*, being a resin. The genuine *elemi* is brought from Ethiopia in flatish masses, or in cylinders, of a yellowish colour. It is very rare in Europe, and supposed to be produced by a tree of the olive kind. The spurious or American *elemi*, almost the only kind known, is of a whitish colour, with a greater or less greenish or yellowish tinge. It proceeds from a tall tree, which the Brazilians wound, and collect the resin.—*Sir J. Hill, Materia Medica*.

*Elemi* is a resin which exudes from incisions made during dry weather through the bark of the Amyris elemifera, a tree which grows in South America and Brazil. It comes to us in yellow, tender, transparent lumps, which readily soften by the heat of the hand. They have a strong aromatic odour, a hot spicy taste, and contain 12½ per cent. of etheriacs.

The crystalline resin of *elemi* has been called *elemine*. It is used in making lacquer, to give toughness to the varnish.—*Croë, Dictionary of Arts, Manufactures, and Mines*.

**Eleuch**. *s.* [Gr. ελεuchs=proof.] Argument; sophism. *Obsolete*.

The first delusion Satan laid upon Eve, and his whole temptation might be the same *eleuch* continued, as when he said, Ye shall not die; that was, in his equivocation, you shall not incur present death.—*Sir T. Browne, Vulgar Errors*.

Of these sophisms and *eleuchs* of merchandize I skill not.—*Milton, A recognition*.

All your *eleuchs* in logic come within the compass of juggling.—*Selden, Table-Talk*.

Discover the fallacies of our common adversary, that old sophister, who puts the most abusive *eleuchs* on us.—*Dr. H. More, Devout of Christian Piety*.

**Eleuchize**. *v. n.* Dispute. *Obsolete*.

Hear him problematize. Bless us, what's that?—Or syllogize, *eleuchize*.—*R. Jonnes, Sir W. Lau*.

**Eleuchtic**. *adj.* Serving to confute.

It may be proper in this place to remark, that 'indirect reasoning' is sometimes confounded with 'refutation,' or supposed to be peculiarly connected with it; which is not the case; either direct or indirect reasoning being employed indifferently for refutation, as well as for any other purpose. The application of the term '*eleuchtic*,' (from ελεuchs, to refute or disprove), to indirect arguments, has probably contributed to this confusion.—*Whately, Elements of Rhetoric*, pt. i. ch. iii. § 7.

**Eleuchtical**. *adj.* Same as Eleuchtic.

Doctrinal application . . . is of two kinds; didactical, *eleuchtical*, . . . *Eleuchtical*, *ελεuchs*, in some controverted point, which is usually called an use of confutation, for the refuting of such erroneous positions as do subvert the truth.—*Bishop Wilkins, Ecclesiastes, or Gift of Preaching*, § 2.

**Elephant**. *s.* [Lat. *elephas*, *antis*.]

1. Large quadruped so called.

The elephant hath joints, but not for courtesy; His legs are for necessity, not decorum.—*Shakespeare, Troilus and Cressida*, ll. 2.

2. Ivory; teeth of elephants. *Obsolete*.

High o'er the gate, in elephant and gold,  
The crowd shall Caesar's Indian war behold.  
*Drigden, Virgil's Georgics*.

**Elephantiasis**. *s.* Species of leprosy, so called

ed from covering the skin with incrustations like those on the hide of an elephant.

He differed in the temper of his body, being inclined to the leprosy called *elephantiasis*, not so in the patient, but not infectious to the company.—*Feller, History of the Holy War*, p. 94.

Although this disease was first described by Rhazes, it has been very generally confounded in modern times with the *elephantiasis* of the Greeks, from which it is quite distinct. Its resemblance even to the latter affection, does not sufficiently justify M. Albert in arranging it under the same genus. It is seated most frequently in the lower extremities, but is also met with in the upper extremities, in the scrotum, the vulva, the breasts, and more rarely in other parts of the body. The countries in which it is most common are—Barbadoes, and all the West India Islands; various parts of South America; Egypt, and several parts of inter-tropical Africa; Ceylon, the neighbourhood of Cutchin, on the coast of Malabar, and other parts of Hindostan; Japan, and some districts of China; the Polynesian Isles; and the provinces of Asturias and Castile, in Spain. Cases, however, occasionally occur in all the countries of Europe. According to Dr. Graves and Dr. Evenson, a variety of it is common in Ireland. I have seen one case in the Infirmary at Edinburgh; five in London, one of them very recently under the care of Mr. Morley, and several, many years ago, in Africa, and on the continent of Europe. *Copland, Dictionary of Practical Medicine*, in voce.

**Elephantine**. *adj.* Pertaining or relating to, or having the character of, an elephant: (this may consist in the size, awkwardness, coarseness, or hardness of skin and consequent insensibility of the object compared, the figurative use being frequent.)

It is hard for the most *elephantine* swimmer (one of the greatest men of letters) so to trouble these waters, as not therein to discover the protuberance of his own deformities.—*Bishop Stillingfleet, Origines Sacre*, (Ord M8.)

But what insolent familiar dust have united Thomas Coventry?—whose person was a quadruped, his step mazy and *elephantine*, his face square as the lion's, his gait peremptory and path-keeping, indelible from his way as a moving column, the scarecrow of his inferiors, the brow-beater of equals and superiors, who made a solitude of children wherever he came, for they fled his insufferable presence, as they would have shunned an Elisha bear.—*Lamb, Essays of Elia, The Old Beuchers of the Inner Temple*.

**Elevate**. *v. a.* [Lat. *elevatus*, pass. part. of *elevo*; *eleventis*, *antis*.]

1. Raise up aloft.

O, the noble combat, that, 'twixt joy and sorrow, was fought in Paulina! She had one eye declined for the loss of her husband; another *elevated* that the oracle was fulfilled.—*Shakespeare, Winter's Tale*, v. 2.

This subterranean heat or fire, which *elevates* the water out of the abyss.—*Woodward*.

2. Exalt; dignify.

A gentleman of the popular fiction had been long declaiming against any kind of honours that tended to *elevate* a body of people into a distinct species from the rest of the nation.—*Shenstone*.

3. Raise with great conceptions.

In all that great extent, wherein the mind wanders, in those remote speculations it may seem to be *elevated* with, it stirs not beyond sense or reflection.—*Locke*.

Now rising fortune *elevates* his mind.

He shines unclouded, and adorns mankind. *Savage*.

4. Elate with vicious pride.

To mischief swift, hope *elevates*, and joy brightens his crest.—*Milton, Paradise Lost*, ix. 633.

5. Lessen by detraction.

When the judgements of learned men are allowed against you, what do they but either *elevate* their credit, or oppose unto them the judgements of others as learned?—*Hooker, Ecclesiastical Polity*.

**Elevate**. *adj.* Elevated.

On each side an imperial city stood,  
With towers and temples proudly *elevate*  
On seven small hills.

*Milton, Paradise Regained*, l. 34.

**Elevated**. *part. adj.* Raised; lifted aloft; exalted: (applied to thought, expressions, style, and general character).

A grandeur, a simplicity, a breadth of manner, an imagination at once *elevated* and restrained by the subject, reign throughout Milton's Ode on the Nativity.—*Hollam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. v.

**Elevatedness**. *s.* Attribute suggested by Elevated; elevation: (this latter being the commoner term).

I had neither wife nor children, in whom mutua-

ally to reflect and are reflected the *elevatedness* and generosity of my station.—*Godwin, St. Leon.*

## Elevation. s.

### 1. Act of raising aloft.

The disruption of the strata, the *elevation* of some, and depression of others, did not fall out by chance, but were directed by a discerning principle.—*Woodward.*

### 2. Exaltation: dignity.

Angels, in their several degrees of *elevation* above us, may be endowed with more comprehensive intuition.—*Lodge.*

### a. Of the mind.

We are therefore to love him with all possible application and *elevation* of spirit, with all the heart, soul, and mind.—*Norris.*

### b. Of style.

His style was an elegant perspicuity, rich of phrase, but seldom any bold metaphors; and so far from tumid, that it rather wanted a little *elevation*.—*Sir H. Wotton.*

### 3. Height of any heavenly body with respect to the horizon.

Some latitudes have no canicular days, as those which have more than seventy-three degrees of northern *elevation*, as Nova Zembla.—*Sir T. Browne, Vulgar Errors.*

**Eleven. pr.** [see extract and the remarks thereon.] Cardinal number so called. In English notation 11; in Roman xi.

[*Eleven*.—Anglo-Saxon, *endleofan*; Gothic, *ainlif*; eleven, *twelf*, *twelfth*, twelve. Lithuanian, *veniolika*, eleven, *dvilika*, twelve, from *arvus*, one, *desi*, two. The radical identity of the second element in the Gothic and Lithuanian forms has been generally admitted, in accordance with the analogy of the parallel roots *lip* and *lik*; in Greek, *Arcture*, *Arcture*, to leave; Gothic, *laiba*, relief, *offhian*, to remain; and in Latin, *lingere*, *lictum*, to leave; Lithuanian, *likti*, to remain over. The sense required for this element is indicated in the Laplandish expressions for the same numerals, *akta lokke nola*, one upon ten, one in excess of ten, two in excess of ten, and so on. But the word for ten might easily be left unexpressed, as it actually is in Finnish, *eri toista*, eleven, literally, one in the second [ten]. The ellipse is supplied in the expression for twelfth, *toinen toista kymmentä*, the second in the second ten. The Estonian uses indifferently the elliptic or the complete expression, *aks tein*, or *aks tein kummen*, one in the second, or one in the second ten. Now Lithuanian *lyksa* signifies surplus, remainder; *lyksa*, what remains over, odd, and the latter, in combination with the original first, second, &c., is used to designate the numbers immediately following ten; *pirmas*, *antras*, &c., *lyksa*, the first, second, &c., excess above ten, i.e. eleven, twelve, and so on. The radical identity of forms like these with the cardinal series, *veniolika*, *dvilika*, &c., on the one hand, and on the other with the verbal forms *likvi*, *likti*, to remain over, *palikti*, to leave behind, cannot be doubted; and having thus traced the meaning of the Lithuanian termination *lika* to the idea of surplus expressed by the root of *lingere*, we have strong analogy for a similar explanation of the termination in Gothic *ainlif*, *ainlif*, and English *eleven*, from the root of Greek *arcture*, and English *leave*.—*Wedgwood, Dictionary of English Etymology.*

The editor holds the doctrine conveyed in the preceding extract; and, until lately, saving the recognition of the Lithuanian forms, it was the general one. Influential authorities, however, with these before them, have read the evidence differently; indeed have reversed it, holding that the *l* is neither more nor less than the *d* in *dec-em*, *dis-sen*, &c., and that *veniolika* and *dvilika*, instead of being exceptions to formulas *thir-teen*, *four-teen*, &c., are 3 + 10, 4 + 10, and so on, and simply 1 + 10, and 2 + 10, on the same principle as the rest.]

**Eleventh. adj.** Ordinal of Eleven.

**Eleventhly. adv.** In the eleventh place.

**Elf. s. pl. elves.** [A.S. *elf*. In composition, *mount-elfen*—mountain elves; *wuth-elfen*—wood elves; *sa-elfen*—water elves.] Spirit, in the mythological sense of the term, generally either undersized or mischievous, or both: (hence, as in the extracts from Dryden and Swift, the word is nearly synonymous with *devil*, and in that from Shenstone to *dwarf*. Perhaps the term is oftener applied to males than female, and to solitary rather than social

spirits. Still, an exact definition, stating how an *elf* differed from a *fairy* on the one side, and from a *goblin* on the other, not to mention *dwarfs* and *fiends*, is impracticable.

Through this house give glimmering light,  
By the dead and drowsy fire;  
Every *elf*, and fairy sprite,  
Hlop as light as bird from brier.

*Shakspeare, Midsummer-Night's Dream, v. 2.*

Fairy *elves*,  
Whose midnight revels by some forest side,  
Or fountain, some belated peasant sees,  
Or dreams he sees. *Milton, Paradise Lost, l. 781.*  
That we may angels seem, we paint them *elves*;  
And are but satires to set up ourselves.  
Dryden.  
For he ne'er could have fill'd it so well of himself.

*Swift.*  
Though now he crawl along the ground so low,  
Nor wringing how the muse should soar on high,  
Wisheth, poor starv'ling *elf*, his paper-kite may fly.

*Shakspeare* distinguishes them; 'Ye *elves* of hills, brooks, standing lakes, and groves, &c.' (*Tempest*.) Fletcher, in the Faithful Shepherdess, distinguishes between the *elf* and the *fairy*, though he places both among 'the powers that haunt the grove'; as the 'goblin, wood-god, fairy, *elf*, or fiend.' The general opinion of *elves* was, that they were a kind of diminutive demons, called also *dwarves* or *dwarfs*. *Shakspeare* calls them *demij-puppets*. Hence the word has passed into our language for *dwarfs* in general.—*Todd.*

**Elf. v. a.** [the ordinary derivation is from the substantive, the vulgar being said to believe that the hair of persons asleep is twisted and twined by fairies. Warburton connects this belief with the Plena Polonica. The verb from *elf* should end in *r*, as *half*, *hulce*, *use*, *uze*, &c. In *dwarf* (*v*), however, we have the retention of the *f* in both parts of speech.] Entangle—hair in so intricate a manner that it cannot be unravelled.

My face I'll crime with *Elfh*,  
Blanket my loins, *elf* all my hair in knots.

*Shakspeare, King Lear, ii. 3.*

**Elfen. adj.** ? Belonging to fairyland.  
Now when that little dream was to him brought,  
Unto that *elfin* knight he bade him fly.  
Where he slept soundly.

*Mycer, Faerie Queen.*

**Elfen. s.** Child: (perhaps as being small and mischievous).  
She was just and friend to virtuous lore,  
And pass'd much time in truly virtuous deed;  
And in those *elfin* ears would oft deplore  
The times when truth by popish rage did bleed.

*Shenstone, Schoolmistress, st. 13.*  
**Elfish. adj.** Relating or belonging to, connected with, or having the character of, an *elf*.

In Chaucer's Tale of the Chanon Yeman, chymistry is termed an *elfish* art, that is, taught or conducted by spirits. This is an Arabian idea.—*T. Warton, History of English Poetry, l. 100.*

[*Elfish* is entered in the previous editions as a concurrent form with *elfish*, with the remark by Johnson that the latter is the better form. Such is the case; the doctrine that the adjective in *-ish* can be derived from the plural as well as from the singular being invalidated by such formations as *dwarfish*, *selfish*, and the like; in all of which the singular ends in the sound of *f*, the plural in that of *v*. At the same time good reasons can be given for believing that the irregularity (so far as it is one), in respect to the number, is not exactly what it seems to be; it being probable that it is the plural which gives the original termination, and that it is the singular which has converted *v* into *f*. The fact of the Anglo-Saxon spelling being with *f* is not conclusive on this point; for it was probably sounded as *v*, so that, phonetically, the original singulars of *loaves*, *halves*, *calves*, *leaves*, &c., were *loav*, *hulv*, *calv*, *leav*, &c. In the Swedish this power of *f* is beyond dispute, *staf* being sounded *stäv*. Moreover, in the allied languages the final consonant is *b*, *weib*

# ELIG

(wife), *laub*, *halb*, *halb*, &c. Here, however, the *b* is sounded as *p*. If this view be right, viz. that the spelling in *f* by no means represents the old pronunciation, examples in *v* (*elvish*), when taken from very old authors, may represent a regular formation from a singular *elv*, whilst those in *f* from very new ones represent one equally regular from *elf*; there being, in fact, two words, or at least two forms of the same word. When one ended and the other began it is difficult to ascertain. Chaucer's *elvish* craft and *elvish* lore, applied to chemistry, was, probably, as regular as the *elfish* of the present day. With Spenser and Shakspeare, however, it is a matter of doubt how far they followed older precedents, and how far the sound coincided with the spelling. Warton quotes it as spelt with *f*.]

Here no night-ravens lodge, more black than pitch,  
Nor *elvish* ghasts, nor ghastly owls do flee.

*Spenser, Shepherds' Calendar, June.*

Thou *elvish* mark, abortive, rioting hug!  
The slave of nature, and the son of hell!

*Shakspeare, Richard III. l. 3.*

No muse hath been so bold,  
Or of the latter, or the old,  
Those *elvish* secrets to unfold,  
Which lie from others' reading.

*Drayton.*

**Elvelock** is similarly entered.

From the like might proceed the fears of polling  
*elvelocks*, or complicated hairs of the head.—*Sir T. Browne, Vulgar Errors.*

**Elvelock. s.** Twisted, matted, or intricately entangled hair. See remarks under *Elfish*.

This is that very Mah,  
That plies the manes of horses in the night;  
And takes the *elvelocks* in foul sluttish hairs,  
Which, once entangled, much misfortune bores.

*Shakspeare, Romeo and Juliet, l. 4.*

**Elliciate. v. a.** [? Lat. *allicio*—allure; *allicio* (though a word equally barbarous) being, probably, what is meant.] ? Entice. *Rare.*

Who went clad in woman's apparel, the better to *elliciate*, countenance, act and colour their unnatural excreable uncleanness, which I abhor to think of.—*Prynne, Histriomastix, pt. l. act v. s. 6.* (*Rich.*)

**Ellicit. v. a.** [Lat. *elicitus*, pass. part. of *elicio*—strike out; *elicitativus*—striking out.] Strike out; fetch out by labour or art.

Although the same truths may be *elicted*, and explicated by the contemplation of animals, yet they are more clearly evidenced in the contemplation of man.—*Sir M. Hale, Origination of Mankind.*

**Ellicit. adj.** Brought into act; brought from possibility to real existence. *Rare.*

It is the virtue of humility and obedience, and not the formal *elicit* act of meekness; meekness being ordinarily annexed to these virtues.—*Hammond.*

The schools dispute whether, in morals, the external action superadds any thing of good or evil to the internal *elicit* act of the will.—*South.*

**Ellicitate. v. a.** *Ellicit*; fetch out by labour or art. *Rare.*

Thus may a skilful man hid truth *ellicitate*.

*Dr. H. More, Song of the Sont, iii. 2. 41.*

**Ellicitation. s.** Act by which anything is *ellicated*.

That *ellicitation* which the schools intend, is a deducing of the power of the will into act; that drawing which they mention, is merely from the apprehensibility of the object.—*Bishop Bramhall.*

**Elide. v. a.** [see *Elision*.]

1. Break in pieces; crush.

We are to cut off that whereunto they, from whom these objections proceed, fly for defence, when the force and strength of the argument is *elided*.—*Hooker, Ecclesiastical Polity.*

2. Cut off a syllable by *Elision*.

Mr. Wolf remarks the care with which the ancients, in apocryphal words, connected the consonant belonging to the *elided* syllable with that immediately following; whereas, among us, it is by well-informed readers often made to terminate the former syllable.—*British Critic, Sept. 1796.*

**Eligibility. s.** Worthiness to be chosen.  
Sickness hath some degrees of *eligibility*, as least by an after-choice; because to all persons, who are within the possibility and state of pardon, it becomes a great instrument of pardon for sin.—*Jerome*

*aylor, Rule and Exercises of Holy Dying, § vi. i. 11.*

The business of the will is not to judge concerning the nature of things, but to choose them in consequence of the report made by the understanding, as to their eligibility or goodness. — *Fiddes, Sermons.*

**Eligible, adj.** [Lat. *eligibilis* = fit to choose or select.]

1. Capable of being, or fit to be, chosen.

A British ministry ought to be satisfied, if, allowing to every particular man that his private scheme is wisest, they can persuade him that, next to his own plan, that of the government is the most eligible. — *Addison, Freeholder.*

Did they really think that going on with the war was more eligible for their country than the least abatement of those conditions? — *Swift.*

Certainly, in a deep distress, is more eligible than misquise. — *Richardson, Clarissa.*

2. Preferable.

Again, such propositions as the following, one may often hear, superficially or negligently, confounded together: 'The Apostles held religious assemblies on the first day of the week,' with 'They transferred the Sabbath from the seventh day to the first'; 'A Jew, Mahometan, or Roman Catholic, is not the eligible person to hold office in a Protestant-christian country,' with 'Such persons ought not to be legally eligible'; 'The Apostles established such and such a form of government in the churches they founded,' with 'They designed this form to be binding on all Christians as an ordinance for ever.' — *Whately, Elements of Logic, Of Fallacies, § 19.*

**Eliminate, v. a.** [Lat. *eliminator*, puss. part. of *elimino* = put beyond the threshold (*limen*).] Put out of doors; release from confinement; get rid of anything.

Loose me from earth's inclosure, from the sun's contracted circle set my heart at large; *Eliminate* my spirit, give it room; Through provinces of thought yet unexplored; Teach me by this stupendous scaffolding, Creation's golden steps, to climb to God.

*Young, Night Thoughts, ix.*

In the following lines, where 'thou' applies to a snail, the meaning seems to be 'cross or pass the threshold.'

Look'd up, thou'rt head all o'er, And ne'er *eliminat*'d thy door. — *Luttrell.*

**Elimination, s.** Act of turning out of doors; banishing; getting rid of anything.

He [St. Peter] writes this [his first epistle] to his countrymen, the Jews; amongst whom, notwithstanding their dispersion, there were doubtless many rich owners, as there are still in many parts of the world, after all their disastrous *eliminations*. — *Bishop Hall, Romans, p. 201.*

**Eliguation, s.** [Lat. *eliquatio, -onis*; from root of *liquor* and *liquidus*.] See first extract. *Rare.*

[*Eliguation*.] In metallurgy, [is] a separation of the different parts of mixed bodies, by the different degrees of fire required to melt them. — *Chemists.*

This is done by the process named in metallurgy *eliquatio*. — *Black, iii. 230. (Orel M.S.)*

**Elision, s.** [Lat. *elido* = strike out; pass. part. *elidus*; *eliso* = striking out.]

1. In Grammar. Act of cutting off; (as, 'can't th' attempt, in which there is an elision of two syllables).

You will observe to the abbreviations and *elisions*, by which consonants of most obdurate sounds are joined together, without any softening vowel to intervene. — *Swift.*

2. Division, or separation, of parts in general.

The cause given of sound, that it would be *elision* of the air, whereby, if they mean any thing, they mean a cutting or dividing, or else an attenuating of the air, is but a term of ignorance. — *Bacon, Natural and Experimental History.*

**Elite, s.** [Fr.] See extract; also Pick, s.

A word, of military adoption, not wanted in our language; for the flower of an army much better expresses what *elite* pretends, the selection or chosen part of it; 'the choice and flower of all the troops,' as Benham writes. Yet *elite* is old, in the Scottish terms, for one elected to a bishoprick. — *Todd.*

**Elization, s.** [Lat. *elization, -onis* = boiling; *elirus* = boiled.] Boiling or stewing of anything.

*Elization* is the seething of meat in the stomach, by the mild natural heat, as meat is boiled in a pot; to which corruption, or putrefaction, is opposite. — *Burton, Anatomy of Melancholy, p. 21.*

Even to ourselves, and more perfect animals, water performs no substantial nutrition; serving for refrigeration, dilution of solid aliment, and its *elization* in the stomach. — *Sir T. Browne.*

**Elisir, s.** [Arabic.] Essence, or quintessence; liquor with which the alchemists attempted the transmutation of metals; strong tincture or spirit; cordial.

No alchemist yet the *elixer* got, But gloried in his present pot, If by the way to him befall Some odoriferous thing, or medicinal. — *Donne.*

What wonder then, if fields and regions here Breathe forth *elixer* pure? — *Milton, Paradise Lost, iii. 607.*

In the soul, when the supreme faculties move regularly, the inferior passions and affections following, there arises a serenity infinitely beyond the highest quintessence and *elixer* of worldly delight. — *South, Sermons.*

For when no healing art prevail'd, When cordials and *elixer* fail'd, On your pale cheek he dropp'd the show'r, Reviv'd you like a dying flower. — *Waller.*

There was the manager of the opera . . . and a Neapolitan physician, in whom Lord Monmouth had great confidence, and who himself believed in the *Elixer* Vitæ, made up the party. — *Diarelli the younger, Coningsby, b. vii. ch. vii.*

**Elixivate, v. a.** Lixivate. *Rare.*

These ashes being carefully *elixivated*, afforded five scruples of white fixed salt. — *Boyle, vol. iv. p. 734. (Rich.)*

**Elxiviation, s.** Lixivation. *Rare.*

And by examining these substances by fit and proper ways, as also the cap, most, by calcination, *elxiviation* (if it will bear such a key), vitrification. — *Boyle, vol. iv. p. 500. (Rich.)*

**Elk, s.** [A.S. *ele*.] Large animal akin to the stags and reindeers so called.

The *elk* is a large and stately animal of the stag kind. The neck is short and slender; the ears nine inches in length, and four in breadth. The colour of its coat in winter is greyish, in summer it is paler. The horns of the male *elk* are short and thick near the head, where it by degrees expands into a great breadth, with several prominences in its edges. — *Sir J. Mill.*

**Elk, s.** [Welsh, *elarch*; Cornish, *clerk*.] Name, perhaps provincial, of the Hooper, or whistling swan: (given by Yarrell in the synonymy, though not in the text; connected with, and probably the original form of, the Latin *olor*).

**Ell, s.** [A.S. *ela*.] Measure of length equaling forty-five inches, or a yard and a quarter.

They are said to make yearly forty thousand pieces of linen cloth, reckoning two hundred *ells* to the piece. — *Addison.*

Acquit thee bravely, play the man; Look not on pleasures as they come, but go; Defend not the last virtue; life's poor span Make not an *ell* by trifling in thy way. — *G. Herbert.*

Used for any actually or comparatively long measure, as in 'Give an *ell* and they'll take an *ell*;' applied to persons who must not be given way to lest they encroach further.

**Ell, v. a.** Measure. *Rare.*

After that the cloth hath beene seene and approved, the squire measures do both *ell* it and make it. — *Time's Storehouse, p. 324. (Orel M.S.)*

**Ellingness, s.** Attribute suggested by Elling, a word entered in Todd's edition, but with no example later than Piers Plowman:

'Heavy-chere'd I yede and *ellenge* of herte.'

Ray, too, is quoted for its use in Sussex, and Grose for its use in Kent, where it means 'solitary, lonely, melancholy, far from a neighbour.' This, he thinks, connects it with the French *elaiser* and the Latin *elanguis*. 'Bullocker defines it strange.' The Anglo-Saxon *elenge* and *elende* are also quoted as meaning 'long, tedious.' Though the exact details of its use and origin in English are uncertain, it has nothing to do with *long*, but is the German *elendig* = miserable, pitiable.

This shall be to advertise you of the great *Ellingness* that I find here since your departing. — *King Henry VIII. to Anna Bolyn, Letters pub. 1714, p. 29.*

**Ellipse, s.** See Ellipsis, 2.

This path . . . supplies us with further illustrations. For it is not an exact circle or *ellipse*; which it would be were the tangential and centripetal

forces the only ones concerned. Adjacent members of the solar system . . . cause what we call perturbations; that is, slight divergences in various directions from that circle or *ellipse* which the two chief forces would produce. — *Herbert Spencer, The Direction of Motion, § 87.*

**Ellipsis, s.** [Gr. *ἐλλειψις*, from *λείπω* leave, fail, full short; with *ἐλλειπτικός* and *ἐλλειπτικός* as adjective and adverb.]

1. Figure of rhetoric, by which something is left out necessary to be supplied by the hearer or reader: (as, 'the thing I love,' for 'the thing which I love').

The words are delivered by way of *ellipsis*, Rom. iv. 18. — *Hanmond.*

2. In Geometry. Oval figure generated from the section of a cone, by a plane cutting both sides of the cone (but not parallel to the base, which produces a circle) and meeting with the base when produced. (The plural *ellipses*, being common to this and the English form *ellipse*, makes certain combinations ambiguous. In the previous editions it is the Latin form which alone is entered. The common form now is *ellipse*.)

On the cylinder inclined, describe an *ellipse* parallel to the horizon. — *Bishop Wallis, Geometriae.*

**Elliptic, adj.** Having the form of an ellipse; oval.

Since the planets move in *elliptical* orbits, in one of whose foci the sun is, and by a radius from the sun describe equal areas in equal times, which no other law of a circulating fluid, but the harmonical circulation, can account for; we must find out a law for the paracentric motion, that may make the orbits *elliptical*. — *Cheyne, Philosophical Principles.*

**Elliptical, adj.**

1. Having the character of an ellipse. In animals that gather food from the ground, the pupil is oval or *elliptical*; the greatest diameter going transversely from side to side. — *Cheyne, Philosophical Principles.*

2. Having the character of a (geometrical) ellipse.

We may more rightly say, that *it* [eye] is an *elliptical* expression instead of *eye* [eye]. — *Kantchell, Anecdotes upon some different Topics in all the books of the New Testament, p. 174. 1863.*

**Elliptically, adv.** In an elliptical manner; according to the rhetorical figure.

'Looked upon as dull' [is] *elliptically* expressed to avoid the repetition of 'as.' The sentence, if drawn out at length, would be, 'looked upon as being as dull as' — *Bishop Hurd, On Abolition, § 170.*

**Elm, s.** Native forest and timber tree so called, of the genus *Ulmus*.

The species are, the common rough-leaved *elm*; the witch hazel, or broad-leaved *elm*, by some called the British *elm*; the smooth-leaved or witch *elm*. Neither of them were originally natives of this country; but they have propagated themselves by seeds and suckers in such plenty as hardly to be rooted out; especially in hedgerows, where there is labour for their roots. They are very proper to plant in hedgerows upon the borders of fields, where they will thrive better than when planted in a wood or close plantation, and their shade will not be very injurious to whatever grows under them; for they may be trained up in form of an hedge, keeping them cut every year, to the height of forty or fifty feet; but they should not be planted too near fruit-trees; because the roots of the *elm* will intermix with the roots of other trees, and deprive them of nourishment. — *Miller.*

Used metaphorically. Support: (being used in Italy to support the vine).

Thou art an *elm*, my husband; I a vine, Whose weakness married to thy stouter state, Makes use with thy strength to communicate. — *Shakespeare, Comedy of Errors, ii. 2.*

**Elmy, adj.** Abounding with elm trees.

The simple spire, and *elmy* grange. — *T. Warton, Odes, xl.*

**Ellocation, s.** [Lat. *ellocatio, -onis*; from *locus* = place.] *Rare.*

1. Removal from the usual place of residence.

When the child either by general permission, or former *ellocation*, shall be out of the parent's disposing. — *Bishop Hall, Cases of Conscience.*

2. Departure from usual method; ecstasy.

In all poetry (if it be good and worthy) there must be not only an imitation, and imitation, but also an *ellocation*, and emotion of the mind. The poet

must be 'extra se positus, et à mento alienatus.'—*Euthyphro, Athenæus*, p. 30.

**Elocution.** *s.* [Lat. *elocutio*, -onis; from *lucutus*, part. of *loquor* = speak.]

1. Utterance of speech; delivery; eloquence (so far as it depends upon the distinctness of enunciation and the appropriate modulation of the voice).

Whose taste, too long forbore, at first essay  
Gave eloquence to the mute, and taught  
The tongue not made for speech to speak thy praise.

*Milton, Paradise Lost*, ix. 747.

Where the author is actually reading his own composition, he will be still more likely . . . to approach, in the delivery of it, to the *elocution* of a reader; . . . on the other hand, it is possible for him, even without actually deceiving the hearers into the belief that he is speaking extempore, to approach indefinitely near to that style. The difficulty however of doing this, to one who has the writing actually before him, is considerable. . . . This (as it may be called) extemporaneous style of *elocution*, is—in any case where it is not improper—much the more impressive. . . . Little, if any, attention has been bestowed on this point by the writers on *elocution*; the distinction above pointed out between reading and speaking, having seldom, or never, been precisely stated, and dwelt on. Several however have written elaborately on 'good reading,' or on *elocution*, generally; and it is not to be denied, that some ingenious and (in themselves) valuable remarks have been thrown out relative to such qualities in *elocution* as might be classed under the three heads I have laid down, of Propriety, Energy, and Elevation; but there is one principle running through all their precepts, which being, according to my views, radically erroneous, must (if these views be correct) vitiate every system founded on it. The principle in question is, that in order to acquire the best style of delivery, it is requisite to fix the attention on the voice;—to study analytically the emphases, tones, pauses, degrees of loudness, &c., which give the proper effect to each passage that is well delivered—to frame rules founded on the observation of these—and then, in practice, deliberately and carefully to conform the utterance to these rules, so as to form a complete artificial system of *elocution*.—*Whately, Elements of Rhetoric*, pt. iv. ch. i. § 3, 4.

2. Eloquence (in the way of diction). Of doubtful propriety.

The third happiness of this poet's imagination is *elocution*, or the art of clothing or adorning that thought so found, and varied, in apt, significant, and sounding words.—*Dryden*.

As I have endeavoured to adorn it with noble thoughts, so much more to express those thoughts with *elocution*.—*Id.*

**Elocutive.** *adj.* Having the power of eloquent expression or diction.

Though preaching, in its *elocutive* part, be but the conception of man.—*Fellham, Remotes*, ii. 4.

**Eloge.** *s.* [Fr.] Funeral oration; panegyric on the dead.

I return you, sir, the two *eloges*, which I have perused with pleasure. I borrow that word from your language, because we have none in our own that exactly expresses it.—*Bishop Atterbury, Letter to Monsieur Thieriot, Epistolary Correspondence*, i. 179.

**Elogist.** *s.* One who pronounces an eulogy.

[One] made the funeral sermon, who had been one of her professed suitors; and so she did not want a passionate *elogist*, as well as an excellent preacher. *Sir H. Wotton, Reliquia Wottonianæ*, p. 304.

**Elogium.** *s.* Latin, and original, form of Eulogy and Elogy.

God loves a reasonable service, and he has so tempered his commands, that every act of obedience we perform may be so qualified, and gain unto it a reward the *elogium* promised in the law of Moses: 'Surely this people is a wise and understanding people.'—*Dr. H. More, Discourse of Christian Piety*, ch. v. (Ord MS.)

There are very common funeral orations and *elogiums* on deceased persons, who have acted among mankind with some figure and reputation.—*Addison, Spectator*, no. 217. (Ord MS.)

**Elogy.** *s.*

1. Same as Eulogy, of which it is a more English form.

2. Eulogy (by mistake or confusion).

Buckingham lay under millions of maledictions, which at the prince's arrival did vanish into praises and *elogies*.—*Sir H. Wotton*.

If I durst say all I know of the *elogies* received concerning him, I should offend the modesty of our author.—*Boyle*.

Some excellent persons, above my approbation or *elogy*, have considered this subject.—*Holder, Elements of Rhetoric*.

**Eloignate.** *v. a.* Remove to a distance. *Rare.*

Nor is some vulgar Greek so far adulterated, and *eloignated* from the true Greek, as Italian is from the Latin.—*Howell, Instructions for Foreign Travel*, p. 140.

**Eloigne.** (in Spenser, Esloyno.) *v. a.* [Fr. *eloigner*.] Put at a distance; remove one far from another. *Rare.*

From worldly cares himself he did *elogyne*,  
And greatly shunned manly exercise.

*Spenser, Faerie Queen*.

I'll tell thee now, dear love! what thou shalt do  
To amper destiny, as she doth us;

How I shall stay though she *elogyne* me thou,  
And how posterity shall know it too. *Donna*.

**Eloignement.** *s.* Remoteness; distance. *Rare.*

He discovers an *eloignement* from vulgar phrases much becoming a person of quality.—*Shenstone*.

**Elongate.** *v. a.* [Lat. *elongatus*—made long.] Lengthen; draw out; protract; stretch; put further off.

The first star of Aries, in the time of Meten the Athenian, was placed in the very intersection, which is now *elongated* and moved eastward twenty-eight degrees.—*Sir T. Browne, Vulgar Errors*.

**Elongate.** *v. n.* Go off to a distance from anything. *Rare.*

**Elongation.** *s.*

1. Act of stretching or lengthening itself.

To this motion of *elongation* of the fibres, is owing the union or conglutination of the parts of the body, when they are separated by a wound.—*Arbuthnot, On the Nature and Choice of Aliments*.

2. State of being stretched.

This whole universality of things, which we call the world, is indeed nothing else but a production, and *elongation*, and dilatation of the natural goodness of Almighty God.—*Euthyphro, Athenæus*, p. 207.

3. Distance; space at which one thing is distant from another.

The distant points in the celestial expanse appear to the eye in so small a degree of *elongation* from another, as bears no proportion to what is real.—*Glaucilla, Scripta Scientifica*.

4. Departure; removal.

Our voluntary *elongation* of ourselves from God's presence, must needs be a fearful introduction to an everlasting distance from him.—*Bishop Hall, Remains*, p. 80.

Nor then had it been placed in a middle point, but that of descent, or *elongation*.—*Sir T. Browne, Vulgar Errors*.

5. In Medicine. Imperfect luxation, when the ligament of any joint is so extended or relaxed as to lengthen the limb, but yet not let the bone go quite out of its place.

*Elongations* are the effect of an humor soaking upon a ligament, thereby making it liable to be stretched, and to be thrust quite out upon every little force.—*Wicman, Surgery*.

**Elope.** *v. n.* [see Leap.] Run away; break loose; escape from law or restraint.

It is necessary to treat women as members of the body politic, since great numbers of them have *eloped* from their elegance.—*Addison, Freetholder*.

What from the danger Paris hope?  
She may as well from him *elope*.

The fool whose wife *elope* was once thrice a quarter.  
For matrimonial solace dies a martyr. *Pope*.

**Elopement.** *s.* Running away; (as that of a wife from a husband, or that of the person who carries her off; i.e. the two *eloping* with each other).

An *elopement* is the voluntary departure of a wife from her husband to live with an adulterer, and with whom she lives in breach of the matrimonial vow.—*Aplice, Parergon Juris Civiliæ*.

The negligent husband, trusting to the efficacy of his principle, was undone by his wife's *elopement* from him.—*Arbuthnot*.

**Eloquence.** *s.* [Lat. *eloquentia*, from *e*=out, and *loquor*=speak; part. *eloquens*, -entia.] Power of speaking with fluency and eloquence; oratory.

Action is eloquence, and the eyes of the ignorant

More learned than the ears. *Shakespeare, Coriolanus*, iii. 2.

\* Athens or free Rome, where eloquence  
Flourish'd, since mute.

*Milton, Paradise Lost*, ix. 671.

Little force is necessary to push down heavy bodies placed on the verge of a declivity; but much force is requisite to stop them in their progress, and push them up. If a man should say, that because the first is more frequently effected than the last, it is the best trial of strength, and the only suitable use to which it can be applied, we should at least not think him remarkable for distinctness in his ideas. Popularity alone, therefore, is no test at all of the *eloquence* of the speaker, no more than velocity alone would be, of the force of the external impulse originally given to the body moving. As in this the direction of the body, and other circumstances, must be taken into the account; so, in that, you must consider the tendency of the feeling, whether it favours or opposes the views of the hearers.

To bend a sect, to infuse party-spirit, to make men arrogant, uncharitable, and unlovely, is the easiest task imaginable, and to which almost any blockhead is fully equal. But to produce the contrary effect, to subdue the spirit of faction (in religious matters), and that monster, spiritual pride, with which it is invariably accompanied, to inspire equity, moderation, and charity into men's sentiments and conduct with regard to others, is the genuine test of *eloquence*.—*Campbell, Rhetoric*, b. i. ch. x. sec. 5, p. 230.

There is but little *eloquence* in convincing men that they are in the right, or inducing them to approve a character which coincides with their own.—*Whately, Elements of Rhetoric*, pt. ii. ch. iii. § 1.

This is the perfection of judicial *eloquence*: not avoiding argument, but confining it to such reasoning as becomes him who has rather to explain the grounds of his own conviction, than to labour at convincing others; not rejecting evidence to authority, but never betaking a disposition to seek shelter behind other men's names, for what he might fear to pronounce in his own person; not disdaining even ornaments, but those of the more chastened graces that accord with the severe standard of a judge's oratory. This perfection of judicial *eloquence* Sir William Grant attained, and its effect upon all listeners was as certain and as powerful as its merits were incontestable and exalted.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III.*, Sir William Grant.

Again, as to questions of style and *eloquence*, the judgment of the people, or at least of the persons to whom the composition is addressed, must be taken as the test of its answering the purpose for which it is intended; since, in the department of rhetoric, the object is to make an impression on the hearer or reader, and thus to influence his conviction or raise his feelings. According to the maxim quoted by Lord Bacon: 'Argumentum ad vulgus, sententium ut sapientem.'—*Sir H. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. vi.

**Eloquent.** *adj.* Having the power of oratory; having the power of fluent and eloquent speech.

The Lord of hosts doth take away the captain of fifty, and the honourable man, and the counsellor, and the cunning artifice, and the eloquent orator. *Isaiah*, iii. 3.

O death! all eloquent, you only prove  
What dust we do to on, when 'tis man we love.

*Pope*.

**Eloquently.** *adv.* In an eloquent manner; in elegant language, written or uttered with fluency.

An orator, by others' instruction perfectly furnished, may in every matter and learning, commend or disparage or exhort or dissuade, accuse or defend *eloquently*, as occasion happeneth.—*Sir T. Elyot, The Governour*, fol. 41, b.

**Elo.** *adv.* [A.S. *ellex*.] Otherwise; besides.

Be more abstemious,

Or *elo*, good night your vow.

Sure, some great person.

They would not make his hurry *elo*.

*Beaumont and Fletcher, Captives of the Country*.

He says, 'twas then with him, as now with you;

He did it when he had nothing *elo* to do.

*Sir J. Denham*.

What ways are there whereby we should be assured, but either by an internal impression of the notion of a God upon our minds, or *elo* by such external and visible effects as our reason tells us must be attributed to some cause?—*Archbishop Tillotson*.

Used pronominally as 'other.'

Should he or any *elo* search, he will find evidence of the Divine Wisdom.—*Sir M. Hale, Origination of Mankind*.

**Eloewhere.** *adv.* In any other place.

As he proved that Pison was not Ganges, or Gehon, Nilus; so where to find them *elower* he knew not.—*Sir W. Raleigh, History of the World*.

Whilst Philip lives and holds the city out,  
Nor postillions nor famine, fire nor sword,  
Nor evil here nor evil elsewhere divide us.

*H. Taylor, Philip Van Artevelde, 1v. 4.*

**Elucubration.** *s.* Lucubration. *Rare.*

**Elude.** *v. a.* [Lat. *eludo* (e = out, *ludo* = play, sport) = escape, mock, make sport of; pass. part. *elusus*; *elusio*, -onis.]

1. Escape by stratagem; avoid any mischief or danger by artifice.

Several pernicious vices, notorious among us, escape or elude the punishment of any law yet invented. *Swift.*

He who looks no higher for the motives of his conduct than the resentments of human justice, whenever he can presume himself cunning enough to elude, rich enough to bribe, or strong enough to resist it, will be under no restraint. *Rogers.*

2. Mock by an unexpected escape.

Me gentle Delia beckons from the plain,  
Then, hid in shades, eludes her eager swain;  
But feigns to laugh to see me search around,  
And by that laugh the willing fair is found. *Pope.*

**Eludible.** *adj.* Capable of being eluded.

There is not any common place more insisted on by those who treat of our constitution than the happiness of trials by jury; yet if this blessed part of our law be eludible at pleasure by the force of power and artifice, we shall have little reason to boast of our advantage, in this particular, over other states or kingdoms in Europe. *Swift, The Drapier's Letters, let. 7.*

**Elusion.** *s.* Escape from enquiry or examination; fraud; artifice.

If our senses be daily deceived in this matter, then is the sensible sacrament nothing else but an elusion of our senses.—*Archbishop Cranmer, To Bishop Gardiner, p. 307.*

This place of our Apostle stands for us unshaken by any the impotent blasts of his frivolous elusions, and shall warrant us against earth and hell, that a bishop may be the husband of one wife.—*Bishop Hall, Honours of married Clergy, p. 104.*

An appendix, relating to the transmutation of metals, detects the impostures and elusions of those who have pretended to it.—*Woodward, Essay towards a Natural History of the Earth.*

**Elutriate.** *v. a.* [Lat. *elutriatus*, pass. part.

of *elutrio*.] In Chemistry. Decant; strain out.

The pressure of the air upon the lungs is much less than it has been computed by some; but still it is something, and the alteration of one tenth of its force upon the lungs must produce some difference in elutriating the blood as it passes through the lungs.—*Arbuthnot, On the Effects of Air on human Bodies.*

**Elutriation.** *s.* Act of straining off; (in Metallurgy) separating of the lighter matters from the mixed ores of metals, by means of great quantities of fair water.

After all its transmutations, elutriations, and filtrations in the body.—*Account of Origen, Theophrastus, 1. 44; 1707.*

When an insoluble pulverulent matter like whitening or ground flint, is diffused through a large body of water, and the mixture is allowed to settle for a little, the larger particles will subside. If the supernatant liquid be now carefully decanted or run off, with a siphon, it will contain an impalpable powder, which on repose will collect at the bottom, and may be taken out to dry. The process is called elutriation.—*Cres, Dictionary of Arts, Manufactures, and Mines.*

**Elvlock and Elvish.** See Elflock and Elfish.

**Elver.** *s.* See extracts (the derivation being, in the mind of the editor, only probable.)

*Elvers* [are] small eels caught in some parts of the kingdom, particularly about Gloucester and Tewkesbury. These are, in reality, young congers, or sea-eels. They get up into rivers while very small; and, as they precede the shads, it is conjectured that they supply them with food. *Chambers.*

This passage of young eels is called elver-run on the banks of the Thames, and I have very little doubt that the term *elver*, in common use on the banks of Severn for a young eel, is a modification or corruption of *elver*.—*Currell, British Fishes.*

**Elysian.** *adj.* Pertaining to Elysium; pleasant; deliciously soft and soothing; exceedingly delightful.

The river of life, through midst of heaven,

**Emanant.** *adj.* [see last extract.] Issuing from something else.

The first act of the divine nature, relating to the world and his administration thereof, is an emanant act: the most wise counsel and purpose of Almighty God terminate in those two great transient or emanant acts or works, the work of creation and providence.—*Sir M. Hale, Origin of Mankind.*

Evidence brings a property emanant from the essence and being of knowledge.—*South, Sermons, ix. 322.*

South writes our word *emanant*, unless it be an error of the press, which is not agreeable to its etymon *emano*, *emans*, &c. *emansans*. In a modern periodical publication I have seen *emane* for *emane*, to which, if it could be tolerated, South's *emanant*, supposing it not a corruption, might then be added.—*Johnson.*

**Emanate.** *v. n.* [Lat. *emanatus*, part. pass. of *emano* = flow out or out of; pres. part. *emansans*, -antis; *emansio*, -onis.] Issue or flow from something else.

Such were the features of her heavenly face;  
Her limbs were formed with such harmonious grace;  
No faultless was the frame, as if the whole  
Had been an emanation of the soul. *Dryden.*

The letters, every judge will see, were by no means efforts of the genius, but emanations of the heart.—*Pope.*

Each emanation of his fire  
That beams on earth, each virtue he inspires,  
Each art he prompts, each charm he can create;

**Embankment. s.** Raised bank.

At the mouth of the rivers the bars thus created generally follow the direction of the current, and the material deposited being dried and partially consolidated in the intervals between the bars, long *embankments* are gradually raised, behind which the rivers flow for considerable distances before entering the sea. Occasionally these *embankments* become closed by the accumulations without, and the pent-up water assumes the appearance of a still canal, more or less broad, according to the level of the beach, and extending for miles along the coast, between the mainland and the new formations.—*Sir J. E. Tennent, Ceylon*, pt. i. ch. i.

Germ, q.v.

**Embryogeny. s.** Development of the em-  
bryo.

Upon these facts Dr. Giraud observes that the  
physiological inferences deducible from them con-  
tribute to the determination of many unsettled  
points involved in the theory of vegetable *embryo-*  
*geny*, and serve to elucidate many obscurities re-  
lating to the morphology of the embryo. — *Lindley,*  
*Introduction to Botany*, p. 223.

**Embryologist. s.** Investigator in the de-  
partment of embryology.

The generalization here expressed and illustrated,  
must not be confounded with an erroneous sen-  
sibility of it that has obtained considerable currency.  
An impression has been given by those who have  
popularized the statements of *embryologists*, that  
during its development, each higher organism passes  
through stages in which it resembles the adult forms  
of lower organisms: that the embryo of a man is at  
one time like a fish, and at another time like a rep-  
tile. This is not the fact. The fact established is,  
that up to a certain point, the embryo of a man and  
a fish continue similar, and that then differences  
begin to appear and increase—the one embryo ap-  
proaching more and more towards the form of a  
fish; the other diverging from it more and more.—  
*Herbert Spencer, Inductions of Biology.*

**Embryology. s.** [Gr. *λόγος* word, reason,  
principle.] Study of the phenomena of  
growth and development during fetal life;  
developmental anatomy.

Of the many noble contributions to *embryology*,  
which science owes to German physiologists, none  
surpass in importance that from which the follow-  
ing remarks (on the development of the egg in one  
of the cuttle-fishes) have been abridged. — *Owen,*  
*Lectures on Comparative Anatomy*, lect. xxiv.

**Embryon. s.** [Gr. *ἑμβρυον*.] Embryo: (of  
which it is the imperfectly Anglicized  
form).

The reverence I owe to that one womb,  
In which we both were *embryons*, makes me suffer  
What's just.

*Shamout and Fletcher, Queen of Corinth.*  
The earth was form'd, but in the womb as yet

lar rotation within the albuminous fluid of the  
chorion. — *Owen, Lectures on Comparative Anatomy*,  
lect. xii.

**Embryonate. v. a.** Furnish with, or charac-  
terize by, an embryo.

**Embryonated. part. adj.** Furnished with,  
or characterized by, an embryo.

St. Paul could not mean this *embryonated* little  
plant, for he could not denote it by these words,  
that which thou sowest, for that, he says, must die;  
but this little *embryonated* plant, contained in the  
seed that is sown dies not. — *Locke*, b. ii. ch. xxvii.  
(Ord MS.)

**Embryónic. adj.** Having the character of,  
connected with, or relating to, an embryo.

Should it however turn out, as we shall hereafter  
find reason for suspecting, that these complex dif-  
ferentiations which adults exhibit, are themselves  
the slowly accumulated and transmitted results of a  
process like that seen in the first cleavage of the  
germ; it will follow that even these *embryónic*  
changes due to hereditary influence, are remote con-  
sequences of the alleged law. — *Herbert Spencer,*  
*First Principles.*

**Embryous. adj.** Having the character of  
an embryo; undeveloped; abortive.

Contemplation generates; action propagates.  
Without the first the latter is defective; without  
the last the first is but abortive and *embryous*. —

**Eméndately. adv.** Without fault; correctly.  
*Rare.*

The printers were very desirous to have the Bible  
come forth as faultless and *eméndately* as the short-  
ness of the time for the recognizing of the same  
would require. — *Flacour, Dedication of the Bible to  
King Henry VIII.*: 1539.

**Emendation. s.**

1. Correction; alteration of anything from  
worse to better.

Nor is the Divine goodness less to be seen, véné-  
rated, and praised, in those *emendations*, which  
follow, to our ease and comfort, the lawful applica-  
tions of art, and ingenuity. — *Jeremy Taylor, Arti-  
ficial Handicrafts*, p. 87.  
The essence and the relation of every thing in  
being is fitted, beyond any *emendation*, for its action  
and use. — *Grew.*

2. Alteration made in the text by editorial  
criticism.

Who ever heard either of *errata* or *errata*?—  
*Hansard* comes forty times in Homer, and if he  
[Hansard] had been, as he thinks himself, *Messieurs*,  
seatus pavoris ex *Pythagore*, he might have found  
out the *emendation*. — *Bentley, To Dr. Davies.*

**Emendator. s.** Corrector; improver; al-  
terer for the better.

In the copies, which they bring us out of the pre-  
tended original, there is so great an uncertainty and  
discrepancy betwixt them, that the Row *emenda-*  
*tors* of Gratian themselves know not how to trust  
it. — *Bishop Cosin, Scholastical History of the Canon  
of Holy Scripture*, p. 123: 1652.

**Emendatory. adj.** Contributing correction  
or emendation.

Darwin used frequently to mention this attempt to  
direct *emendatory* criticism, with strong marks  
of derision. — *J. Watson, Essay on Power*.

The high credit in which *emendatory* criticism  
was held at the beginning of this [the eighteenth]  
century. — *Bishop Hard, Life of Warburton*.

the *émerald*? — *Sir P. Sidney.*

The *émerald* is evidently the same with the an-

naturally polished surface, and is of a pure and  
beautiful green, without the admixture of any other

diamond in lustre and brightness. — *Sir J. Hall, On  
Rocks*.

**Emperor. s.** [Fr. *empereur*; Lat. *imperator* from *imper* = command] = commander.—With this, under the Roman empire, the proper name *Cæsar* nearly corresponded: hence, the special title of the emperor of Austria is *Kaiser*, or *Keyser*. Word for word, though the origin is denied by many eminent authorities, *Tsar*, or *Czar*, is the same word in a Slavonic form, through a Byzantine medium. Thus far the common term (*Emperor*) runs parallel with the proper name (*Cæsar*); the emperor of Austria being the typical or Roman, the emperor of Russia an approximate or Greek, *Cæsar*. The French title has grown out of the *Empire*, as opposed to the Republic, which it superseded. The other applications of the term, i.e. to the highest magistrates of Morocco, Brazil, China, and Hayti, are purely arbitrary.] Highest royal title.

Under pretence to see the queen his aunt,  
Makes visitation.—*Shakespeare, Henry VIII.* i. 1.

**Emphatic. adj.** Having emphasis.

In proper and *emphatic* terms, thou didst paint the blazing comet's fiery tail.—*Arbutnot, History of John Bull*.

First, such a system must necessarily be imperfect; because though the *emphatic* word in each sentence may really be pointed out in writing, no variety of marks that could be invented—not even musical notation would suffice to indicate the different tones in which the different *emphatic* words should be pronounced; though on this depends frequently the whole force, and even sense of the expression. Take, as an instance, the words of Macbeth in the witches' cave, when he is addressed by one of the spirits which they raise: 'Macbeth! Macbeth! Macbeth!' on which he exclaims, 'Had I three ears I'd hear thee'; no one would dispute that the stress is to be laid on the word 'three'; and thus much might be indicated to the reader's eye; but if he had nothing else to trust to, he might chance to deliver the passage in such a manner as to be utterly absurd; for it is possible to pronounce the *emphatic* word 'three' in such a tone as to indicate that 'since he has but two ears he cannot hear.' Again, the following passage, 'Is a candle brought to be put under a bushel, or under a bed? I have heard so pronounced as to imply that there is no other alternative; and yet the emphasis was laid on the right words.—*Whately, Elements of Rhetoric*, pt. iv. ch. ii. § 2.

But it is not to be defended. The etymon is the Gr. *empeirikos*, experiment; whence our word was originally *empeirik*, and the quacks were called 'empirical' practitioners, who use the medicines which they call 'empirical,' &c.—(*Harmar's Translation of Beza*, p. 421: 1587.)—*Yodd*.]

the breast, if not suddenly cured, doth undoubt-  
edly impel the patient into a phthisical consump-  
tion.—*Hurvy.*

There is likewise a consumption from an *emphyéma*,  
after an inflammation of the lungs; which may be  
known from a weight upon the diaphragm, oppres-  
sion of the lungs, a difficulty of breathing, and  
inability to lie on one side, which is that which is  
sounded.—*Arbuthnot, On the Nature and Choice of*  
*Aliments.*

**Emphyreal. adj.** [see Emphyreum.] Formed  
of the element of fire; pertaining to the  
highest and purest region of heaven.

scope we have to extend our thoughts upon.—*W.*

**Emphyreum. s.** [Gr. *ἐμπίρεμα*; from *ἐμπί*  
= fire.] Flavour or smell, from the burn-  
ing of any matter in boiling or distil-  
lation.

The same is the case in both Emphyrean and  
Emphyreal; so that, in each, the vowel  
has the same quantity, and ought to have  
the same accent. The difference, as given  
in the entries, rests solely on the authority  
of Milton. Etymologically, neither word  
is unexceptionable; both the -n (when *ad-*  
*jectival*, or preceded by *a*) and the -f being  
Latin rather than Greek elements.] Em-  
pyreum.

total consummation unto things in this lower world,

especially that of conflagration.—*Sir M. Hale, Origin of Mankind.*

**Enu.** *s.* [According to the first extract, a word that came from the Portuguese; probably, however, through a Dutch medium, and from an original belonging to one of the numerous languages of the Indian Archipelago. The spelling with the simple -u seems to be the English representation of the French *ou*; the pronunciation, in England at least, being -*ew*: *enu* rhyming to *seamew*. In favour of -*eu* are the authorities of the old ornithologists in general, of some of the newer ones, and of the previous editions of this dictionary, wherein, however, it stands as a simple entry (*Enu*) without any extract to support it. *Enu*, meanwhile, is the spelling of the British Museum, the Zoological Gardens, and the chief Australian authorities.]

The original application of this term was lux; denoting, at first (as may be seen from the following extract), a Cassowary. The Rhea, too, has been called the American *enu*. At present the name is conveniently limited to the Australian genus *Dromæus*, which, as far as geographical distribution goes, is eminently natural.

Although many of the facts known with respect to the cassowary of the East Indies may, perhaps, be equally applicable to that of New Holland, yet as they have not been verified by comparison, we shall confine our notices of them to our account of the first species, which we shall designate by the name of *enu*, which was originally bestowed upon it by the Portuguese. The first *enu* seen in Europe was brought over by the Dutch, to whom the king of Chilo, in the island of Java, made a present of it at the time of the first navigation to the Indies in the year 1607. Though this bird does not easily bear the voyage, there have been always some *enu* in Europe ever since that period. Of the New Holland cassowary, the bill of which is depressed, while that of the other is compressed internally, M. Vieillot has formed a separate genus, under the name of *euon* or *Dromæus*. This cassowary is tolerably common in the environs of Botany Bay and Port Jackson. It is very wild, and runs faster than a greyhound. Its flesh is not so ill-flavoured as that of the *enu*, and has taste somewhat resembling that of beef.—*Translation of Cuvier's Règne Animal.*

The only vocal sound the *enu* has been heard to utter is a low booming or pumping noise, which we know is produced in the female by means of the expansion and contraction of a large membranous bag, surrounding an oblong opening through the rings of the trachea; but whether this peculiarity of structure is also to be found in the male I am not aware.—*Gould, Birds of Australia.*

In the *enu* it is interesting to observe that each clavicle commences by a distinct ossification, and soon continues separate from the scapula; it does not reach the sternum, but holds the same relative situation as the continuous acromion or clavicular process of the scapula in the other mammalian birds.—*Owen, Anatomy of Vertebrates*, ii. 68.

**En-** Inseparable element in certain compounds, in all of which it is a prefix. Followed by *b*, *p*, or *m*, it becomes *em*, as may be seen from the preceding entries. It is the French *en*, which is itself formed from the Latin *in*.

In respect to its import and the extent to which it affects our orthography, the following somewhat lengthy remarks must be excused on the strength of the importance of the entries under both *En-* and *In-*; between which there is much confusion, and in the details whereof some considerable alteration will be made. Many words, in the previous editions, are entered under both; some of them being spelt, at the present time, differently from what the authority of Johnson recommended. In others the examples and the entry are at variance. Johnson seems to have favoured the spelling with *i*; many of the words which are spelt with *e* beginning, in his dictionary, with *i*; the converse being comparatively rare. In Todd and Richardson we have similar double entries. Nor will this be wholly avoided in the present edition, though the anomalies will be fewer. Todd seems to have favoured *e*. His

strictures, however, upon his principal and predecessor, carry us but a little way. He remarks that if Johnson had looked more closely to the origin of the several words than he did, he might have been more uniform. *Enquire* and *entire* are from the French; *integrity* and *inquire* from the Latin. This may be found in Johnson's own preface. Nor does the remark touch the real difficulties of the question; the chief of which lie in those compounds wherein the second element is neither Latin nor French, but English; such as *bold*, *bitter*, and others, giving *embolden* or *imbolden*, *embitter* or *imbitter*, or both, as the case may be. Richardson, whose principle of giving his extracts in their original spelling is one of many useful points in his dictionary, enters each word according to the examples he finds of it. He regrets, however, the want of uniformity, and, after quoting Ben Jonson as evidence that even in the time of Elizabeth the confusion between *e* and *i* in pronunciation was common, and after drawing attention to the difference between the negative and augmentative prefixes, adds that 'it might avoid confusion if the *augmentatives* were always written with *e*.' This is a different principle from Todd's; being logical, or determined by the meaning of the word, rather than etymological, or determined by its origin. How much commoner the use of the prefix under notice is than any dictionary shows, or any lexicographer would think it worth while showing, is suggested by the following extract:—*En*, in composition, was used by our old writers more lavishly than now. Skelton appears to have wavered in such compounds. In the very short space of six pages, in Mr. Chalmers's edition of the Poets, the following occur; of which (as they have not been met with elsewhere) the bare enumeration must suffice; viz. *encrampyph* (i.e. *encramp*), *ensowk*, *enback*, *enbard*, *encrip*, *engulaxy*, *enlozeng*, *enpave*, *envalt*, *enbulion*, *englaise*, *enecrown*, *entack*, *ensand*, *enturf*, *engrape*, *engush*, *enswymu*, *ensilure* (*ensilver*), *englyster*, *enverdure*, *enbrethe*, *enbounty*, *enbud*, *enpicture*, *enfloure*, *enlive*. (*Rich.*)

The difference, suggested by Richardson, between the negative and the augmentative *in-* gives us the first element in our criticism; the word *Augmentative* being borrowed from the Latin grammarians. '*In*,' writes Facioliati, 'in compositione multiplex vim habet, modo enim *intendit* augereque, ut *increpo*, *insono*, *infractus*; modo (idque sapius) negat privatque, ut *insanus*, *ineptus*; modo *contra* significat, ut *insulto*; modo *intro*, ut *ingredior*; modo *intus*, ut *indefido*, *inambulo*; modo *supra*, ut *imminco*.'

Here we have, at last, three powers for *in* :—

1. The ordinary one of inclusion; in which the word is simply the prepositional and adverbial *in*.
2. The Negative, which has probably a different origin.
3. The Augmentative, or Intensive; both terms being exceptionable, the latter, perhaps, the least so. This is the use that gives us *instruction* from *struo*, and others. To generalize the import of this would require a longer induction than has yet been accomplished; one, however, which belongs

to Latin rather than to English philology. What touches us are the facts that :

1. The English *in-* and the Latin *in-*, when simply inclusive, coincide; the *in-* in *income*, being the *in-* in *include*.

2. The Latin *in-*, when negative, is the English *un-*, as *in-cognitus*, *un-known*.

3. The *in-* intensive, or augmentative, has no equivalent in English; the inference from this want of coincidence being that whenever *in-*, with an intensive power, is combined with an English root, the word is hybrid; i.e. neither wholly Latin nor wholly English, but one of which the parts were put together on English ground, each element belonging to a different language.

The next complication arises from the French *en-*. In the French the Latin *in-* not only becomes *en-*, but the use of it as an intensive element is largely increased. Meanwhile the Italian follows the Latin, and keeps to *in-*; a point of minor importance, but one which must not be wholly overlooked.

To apply all this, it would seem that, in the first instance at least, we should ask in each particular word, how it was made up, whether by prefixing to an English root the Latin or the French form; the one giving *imbitter* and *imbolten*, the other *embitter* and *embolten*. But the answer is impossible. Even if the history of every word were known, there may have been two concurrent formations, or the original one may have undergone a change since its coinage. Fortunately, however, it is certain, that in the great majority of cases it was the French prefix that was adopted, i.e. the form in *en-*. The presumptions arising out of the practical contact of that language with the English favour this view. The general spelling does the same. Hence, as a rule, the editor suggests that in hybrid words the syllable *en-* be considered the prefix; the only exceptions being certain words in which, despite of their origin, the spelling with *i* has taken too firm root to admit of alteration. In *Impeach*, which is wholly French, this is, perhaps, the case. At any rate it is left as it was found. *Insurance*, instead of *Insurence*, is the entry of the previous editions.

So much for the *en-* augmentative. For the *en-* inclusive, or rather for the question as to whether it has any existence, see *Enwrap*.

As witness'd Bartholomew in his *enchiridion* of  
natural philosophy. Hooker, *Apology*, p. 152.

### Enchirial. adj. [Gr. *ἐνχίριος*; from *en* - in, and *χῆμα* - place.] Native; indigenous; popular; demotic; (chiefly used in *Egyptology*). See extract; also Hieratic and Hieroglyphic.

It is remarkable that the translation of a gospel into Coptic introduced a Greek alphabet into the Coptic language. Though for all religious purposes the scribes continue to use the ancient hieroglyphics, in which we trace the first steps by which pictures are made to represent words and syllables rather than letters, yet for the common purposes of writing they had long since made use of the *enchirial* or common hand, in which the earlier system of writing is improved by the characters representing only letters. But, as the hieroglyphics were also always used for carved writing on all subjects, and the common hand only used on papyrus with a reed pen, the latter became wholly an isolated running hand. . . . It was only on the ancient hieroglyphics thus falling into disuse that the Greeks of Alexandria, almost for the first time, had the curiosity to study the principles on which they were written. Clement Alexandrianus, who thought no branch of knowledge unworthy of his attention, gives a slight account of them, merely agreeing with the results of our modern discovery. He mentions the three kinds of writing: first, the *hieroglyphic*; secondly, the *hieratic*, which is nearly the same, but is written with a pen, and less ornamental than the carved figures; and, thirdly, the *epistolographic*, or common alphabet writing, now usually called the *enchirial*. He then divides the hieroglyphic into the alphabetic and the symbol; and, lastly, he divides the symbol characters into the initiatic, the figurative, and the allegorical. — *Sharp's History of Egypt*, ch. xiv.

### Enclitic. s. [Gr. *ἐνκλιτικός*; from root of *ekleō* = slope.] In Grammar. Particle which throws back the accent upon the foregoing syllable.

It is observed too often that men of wit do so much employ their thoughts upon the operations, that things useful to mankind are wholly neglected; and they are busy in making eundations upon some *enclitics* in a Greek author, while obvious things, that every man may have use for, are wholly overlooked. — *Tulley*, no. 14.

This diversity between the contradistinctive pronouns and the *enclitic*, is not unknown even to the English tongue. When we say, 'Give me content,' the *me* in this case is a perfect *enclitic*. But when we say, 'Give me content, give him his thousands,' the *me* and him are no longer *enclitics*; but as they stand in opposition, and assume an account of their

own, and so become the true *apodouroumēna*, i. e. uprightly accented. — *Harris, Hermes*, b. i. ch. v.

More, Good counsel of the Tongue*. (Ord MS.)

Let no man appropriate what God hath made common; that is against justice and clarity, and by unnumbered evidences that hath declared his displeasure against such *enclosure*. — *Jeremy Taylor*.

**Encowl. v. a.** Make a monk (wearer of a  
cowl) of anyone: (the extent of the rule

monk is suggested by the exception taken  
to it in the proverb, 'Cucullus non facit

monk). *Rare*.

Before her drives diseases and afflict;  
And every moment rises to the night,  
Aspiring to the skies, encroaching on the light.  
*Dryden*.

**Encroch. s.** Gradual advance; advance  
by stealth.  
I cannot imagine that those hereticks who  
fundamentally, and by consequence innamably, took  
their first rise, and began to set up a funda-

mental error; but grow into it by insensible en-  
croaches, and gradual insinuations.—*South, Ser-  
mons*, iv. 370.

**Encrocher. s.** One who encroaches; one  
who seizes the possession of another by  
gradual and silent means; one who makes  
slow and, gradual advances beyond his  
rights.

ness, and keeps at distance an encroacher.—*Rich-  
ardson, Chariton*.

**Encroching. part. adj.** Having the cha-  
racter of that which encroches.

The superstition that rieth voluntarily, and by  
degrees mingled itself with the rites, even of every  
divine service, done to the only true God, must be  
considered of us a creeping and encroaching evil.—

They fabled how the serpent, whom they call'd  
Ophion, with Karynomos, the wide-  
Encroaching Eve perhaps, had first the rule  
Of high Olympus. *Milton, Paradise Lost*, x. 580.

If it be a man's known principle to depart from  
his right, ill men will make unjust encroachments  
upon him.—*Bishop Altieri*.

2. Infringe upon the domain or rights of  
another.

As a man had a right to all he could employ his  
labour upon, so he had no temptation to labour for  
more than he could make use of: this left no room  
for controversy about the title, nor for encroach-  
ment on the right of others.—*Locke*.

The ancient Romans made many encroachments  
on the sea, and laid the foundations of their palaces  
within the very borders of it.—*Addison, Travels in Italy*.

The people, since the death of Solon, had already  
made great encroachments.—*Swift*.  
The southern current in skirting the Cornmand  
coast brings with it quantities of sand, which it de-  
posits, in tranquil weather, and this being carried  
by the wind, is piled in heaps from Point Pedro to  
Hambamette. Hence at the latter point hills are  
formed of such height and dimensions, that it is  
often necessary to remove buildings out of their  
line of encroachment.—*Sir J. E. Tennant, Ceylon*,  
pt. i. ch. i.

**Encrystallize. v. a.** [Gr. *κρυσταλλος* = ice.]  
In the following extract, freeze.

We hear of some encrystad'd, such as have

stead of being of use to it.—*Addison, Freeholder*.

2. Burden upon an estate.

In respect of the encumbrances of a living, con-  
sider whether it be sufficient for his family, and  
to maintain hospitality.—*Ayliffe, Paragon Juris  
Consult.*

**Encyelle. adj.** [Gr. *ἐγκυκλιος* = circular;  
from *κύκλος* = circle.] Circular.

With the contested empire on the death of Leo,  
the religious contests broke out in new fury. *Zeno*

... was driven from the throne by Basiliscus. ... With Basiliscus, the anti-Chalcedonian party rose to power. An imperial encyclic letter branded with an anathema the whole proceedings at Chalcedon, and the letter of Pope Leo, as tainted with Nestorianism.—*Milman, History of Latin Christianity*, b. iii. ch. l.

Often, like Encyclical, used substantively for an encyclic or encyclical letter; the same being the case with Circular, its Latin translation.

**Encyclical. adj.** Same as Encyclic.

This council was not received in patriarchal sees, which is evident from Photius's *encyclical* epistle to the patriarch of Alexandria.—*Bishop Stillingfleet*.

**Encyclopædia. s.** Same as Encyclopaedia.

They are so vigorous for the evidence of sense, that they were allowed any other, but make the most sublimated knowledge a tumult of phantasies; all thought, local motion; all reason, mechanism; and the whole encyclopædia of arts and sciences but a brisker circulation of the blood!—*Manningham, Discourses*, p. 55: 1801.

**Encyclopædia. s.** [Gr. *ἐγκυκλοπαίδεια*; from *ἐν* = in, and *κύβητος* = circle, *παῖς* = instruction, science, of which the root is *παῖς* = child, *παῖς*, whence *παῖς* = instruct, bring up, educate, and *παῖς* = education, training.] Circle of knowledge; round of learning.

In this encyclopædia and round of knowledge, like the great wheels of heaven, we must observe two circles, that while we are daily carried about, and whirled on by the swing and rap of the one, we may maintain a natural and proper course in the sober wheel of the other.—*Sir T. Browne, Vulgar Errors*.

This art may justly claim a place in the encyclopædia, especially such as serves for a model of education for an able politician.—*Arbuthnot, History of John Bull*.  
(See further examples under Encyclopaedic.)

**Encyclopædium. s.** (used also adjectively.) Circle of knowledge; round of learning.

Let them have that encyclopædium, all the learning in the world, they must keep it to themselves.—*Barton, Anatomy of Metaphysics*, p. 131.

**Encyclopædic. adj.** Relating to, having the nature of, consisting in, or constituted by, an encyclopædia.

The downfall of learning and eloquence after the death of Boethius in 525 was incomparably rapid. His contemporary, Cassiodorus, ... by very indifferent compilations and that encyclopædic method which Heeren observes to be the usual concomitant of declining literature, superseded the use of the great ancient writers.—*Hillem, Introduction to the Literature of Europe, in the fifteenth, sixteenth, and seventeenth centuries*, pt. i. ch. l. § 3.

**Encyclopædical. adj.** (used also substantively.) Same as preceding.

Two things, as we saw, are celebrated of Diderot. First, that he had the most encyclopædical head ever seen in the world; second, that he talked as never man talked; ... with regard to the encyclopædical head, suppose it to mean that he was of such vivacity as to admit, and look upon with interest, almost all things which the circle of existence could offer him; in which sense the exaggerated laudation of encyclopædism is not without its fraction of meaning. ... Your true encyclopædical is the Homer, the Shakespeare; every genuine poet is a living, embodied, real encyclopædia in more or fewer volumes. ... But the truth is, as regards Diderot, this saying of the encyclopædical head comes mainly from his having edited a book called the *Encyclopædia*.—*Carlyle, Critical and Miscellaneous Essays, Diderot*.

**Encyclopædism. s.** Encyclopaedic character. (For example see extract under preceding entry.)

**Encyclopædist. s.** One who assists in compiling books which illustrate the whole round of learning: (its chief special application being to the authors of the French Encyclopædia).

It became the only resource of the reader, in many cases where explanation was wanted, to have recourse to Chambers's Dictionary, in four large volumes folio; or to the *Encyclopædia Britannica*, now in eighteen large volumes quarto; or to the still more stupendous performance of the French encyclopædists.—*Hutton, Mathematical and Philosophical Dictionary*, pref.: 1796.

Such boldness on the part of the government caused even the inquisition to tremble. That once omnipotent tribunal, ... instead of extirpating unbelievers by hundreds or by thousands, ... was reduced to such piffling straits, that between 1740 and 1750, it was only able to burn ten persons; and be-

tween 1750 and 1784, only four persons. The extraordinary diminution during the latter period, was partly owing to the great authority wielded by Aranda, the friend of the encyclopædists and of other French sceptics. Huckle, *History of Civilization in England*, vol. ii. ch. l.

Six centuries later, Abelard might have been an encyclopædist, Lanfranc a cabinet minister, and Roger Bacon a scientific chemist.—*C. H. Pearson, The early and middle ages of England*, ch. xxvii.

[In the following passage of Genesis,

'Loth said, God hath *endued* me with a good dowry.'

(Genesis, xxx. 20.)

It seems incorrectly printed for *endow*, Dr. Johnson says. But *endue* was formerly used in the sense also of 'investing' with other powers and advantages than those of the mind; though Dr. Johnson gives the definition only as it applies to mental excellencies. Not such was the opinion of Barret, who, in his dictionary of 1680, renders *indue* by *providere*, apply to it to the ornaments of honour and fortune as well as of wit and virtue. In short, *endue* is to clothe, to invest as with clothes. And Spenser uses it, with the very phrase in question, 'to *endue* with a dowry.' Nor is the pretended misprint to be found only in our present version of the Bible. It is *endue'd* in other versions long before it. In Bishop Wilson's Bible, published in 1758, the word, however, is changed into *adorn'd*. The editors of the Bible which the Society for promoting Christian Knowledge has lately caused to be published with a selection of annotations by those accomplished scholars, have neither remarked the word as incorrect, nor unwarrantably dismissed it from the text.—*Todd*.]

**Endurable. adj.** Tolerable; sufferable.

Not sleeping, to engross his idle body;  
But praying, to enrich his watchful soul.

posed to the minute or small characters of the ori-

French, *gross*, Dutch, *gross*, a notarial copy. Le  
notaire garde la minute et en delivre la gross, keeps  
the minutes and delivers the engrossed copy. 2. In  
the earlier period of our history the engrossing of  
commodities was regarded as an odious social offence,  
and was jealously guarded against by the municipal  
law. The meaning of the word is misunderstood by  
Blackstone, who explains it as 'the getting into our  
possession, or buying up, large quantities of corn,  
or other dead victuals.' The realist of the offence  
was what was considered an unfair engrossing or  
enhancing of the price by buying up what would  
otherwise have been brought to market by the pro-  
ducers themselves. French, *engrossier*, to great  
increase, enlarge. (Coigrove.) From signifying the  
buying up of a commodity in order to increase the  
price, *engross* is metaphorically applied to any in-  
vidious occupation of a matter which ought to be  
shared with other competitors. Thus we speak of a  
favoured visitor engrossing all the attention of the  
host.—*Wedgwood, Dictionary of English Etymo-*

weights and with false measures, will ye never  
leave to content yourselves with honest and lawful  
gain?—*Barrow, Translation of Beza's Sermons,*  
*p. 170: 1587.*

— it, to bring a famine upon our minds again,

us by the bundle?—*Milton, Areopagitica.*

**Entreat. v. a.** Reduce to the condition of, or treat as, a thrall or bondsman; enslave.

His courtiers represented that the king was *entreated* by the dominant party, which had become superior to the throne itself, and, in order to recover his just prerogative, it was necessary to break up the combination. *T. Erskine May, Constitutional History of England*, ch. 1.

**Spelt with *i*.**

The Turk hath sought to extinguish the ancient memory of those people which he has subjected and *entreated*. *Sir W. Raleigh.*

**Enthroned. v. a.**

1. Place on a regal seat.  
Mercy is above this scepter'd sway;  
It is *enthroned* in the hearts of kings;  
It is an attribute to God himself.  
*Shakespeare, Merchant of Venice*, iv. 1.

2. Invest with sovereign authority.

This pope was no sooner elected and *enthroned*,  
but that he began to exercise his new rapines.—*Ag. liff, Peregrine Julia Canonici.*

One, chief, in gracious dignity *enthron'd*,  
Shines o'er the rest. *Thomson, Seasons, Summer.*

**Enthroned. part. adj.** Seated on a throne; regal.

**Enthusias. s.** [Gr. *enthusiasmos*.]

1. Heat of imagination; violence of passion; confidence of opinion.

It [*enthusias*] makes us give a stronger assent to the conclusion than the evidence of the premises will warrant; then, reason begins to be betrayed; and then *enthusias* properly commences.—*Bishop Warburton, Letter to Hurd, Letters*, 30.

2. Elevation of fancy; exaltation of ideas.

Imaging is, in itself, the very height and life of poetry, which, by a kind of *enthusias*, or extraordinary emotion of soul, makes it seem to us that we behold those things which the poet paints.—*Dryden, Preface to Translation of Juvenal's Satires.*  
He [Cowley] was the first who imported to English numbers the *enthusias* of the greater ode, and the gaiety of the iamb.—*Johnson, Lives of the Poets, Cowley.*

3. Belief of private revelation; confidence of divine favour or communication.

*Enthusias* is founded neither on reason nor divine revelation, but rises from the conceits of a warmed or overreaching brain.—*Locke.*

[About half a century before Dryden wrote, the word was written, like its Greek original, 'enthusiasmos,' and defined 'poetical fury.' (Vide Lockerman's Vocabulary.) Flecknoe, upon whom Dryden exercised his satire, uses our word in the plural; which is not very common. With thy *enthusiasms* come. (Invocation of Silence.)—*Todd.*

**Enthusiast. s.**

1. One of a hot imagination, or violent passions; one of elevated fancy, or exalted ideas.

Her little soul is ravish'd, and so pour'd  
Into loose extasies, that she is plac'd  
Above herself, Musick's *enthusiast*.

*Crashaw, Musick's Duck.*

At last divine Cecilia came,  
Inventress of the vocal frame;  
The sweet *enthusiast*, from her sacred store,  
Endur'd the former narrow bounds,  
And added length to solemn sounds,  
With nature's mother wit, and arts unknown before.

*Dryden.*

Chapman seems to have been of an ardent turn, and an *enthusiast* in poetry.—*Pope, Preface to Translation of Homer's Iliad.*

2. One who imagines a private revelation; one who has a confidence of his intercourse with God.

*Enthusiasts* pretend that they have the gift of prophecy by dreams.—*Pogit, Hæcætophonia*, p. 20: 1651.

Let an *enthusiast* be principled that he or his teacher is inspired, and acted by an immediate communication of the Divine Spirit, and you in vain bring the evidence of clear reasons against his doctrine. *Locke.*

**Enthusiastic. adj.** Elevated in fancy; exalted in ideas; vehemently hot in any cause.

An *enthusiastic* or prophetic style, by reason of the earnestness of the fact, doth not always follow the even thread of discourse.—*Bishop Burnet.*

At last, sublim'd  
To rapture and *enthusiastic* heat,  
We feel the present Deity. *Thomson.*

**Enthusiastic. s.** Enthusiast.

The deities and other sanctims, or *enthusiasticks*, being in the crowd, express their zeal by turning round.—*Sir T. Herbert, Relation of some Voyages Traced into Africa and the Great Asia*, p. 325.

**Enthusiastical. adj.** Same as Enthusiastic.

He pretended not to any seraphick *enthusiastical* raptures, or mimable unaccountable transports of devotion. *Colump.*

Did ever you, or any body else, ever see such a place as heaven? For God's sake, therefore, leave these *enthusiastical* whimsies, and talk like men.—*Goodman, Winter's Evening Conference*, p. 133.

**Enthymem. s.** [Gr. *ἐνθύμημα* (from *ἐν* = in, and *θύμη* = mind) = something kept in the mind rather than expressed.] Argument consisting only of an antecedent and consequential proposition; syllogism where one premiss is suppressed.

Playing much upon the simple or illustrative argumentation, to induce their *enthymemes* unto the people, they take up popular conceits.—*Sir T. Browne, Vulgar Errors.*

What is an *enthymem* quoth Cornelius.—Why, an *enthymem*, replied Craumb, is when the major is indeed married to the minor, but the marriage kept secret. *Archibald and Pope.*

There are various abridged forms of argument which may be easily expanded into regular syllogisms, such as, 1st, the *enthymem* (the word *enthymem* is employed in a different sense from this, by Aristotle, in *Rhet.* b. i.), which is a syllogism with one premiss suppressed. As all the terms will be found in the remaining premiss and conclusion, it will be easy to fill up the syllogism by supplying the premiss that is wanting, whether major or minor; e.g. 'Cæsar was a tyrant; therefore he deserved death.' 'A free nation must be happy; therefore the English are happy.' This is the ordinary form of speaking and writing. It is evident that *enthymemes* may be filled up hypothetically. It is to be observed, that the *enthymem* is not strictly syllogistic; i.e. its conclusiveness is not apparent from the mere form of expression, till the suppressed premiss shall have been, either actually or mentally supplied. The expressed premiss may be true, and yet the conclusion false.—*Whately, Elements of Logic*, b. ii. ch. iv. § 7, and note.

'Cognito, ergo sum,'—this famous *enthymem* of the Cartesian philosophy, veiled in rather formal language, that was to him, and must be to us all, the eternal basis of conviction, which no argument can strengthen, which no sophistry can impair, the con-

sciousness of a self within, a perceptible indivisible ego. Gassendi imputed to Descartes that, on his fundamental *enthymem*, 'Cognito, ergo sum,' he supposed a knowledge of the major premiss, 'Quod cogitat, est.'—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. iii. § 80, 104.

**Enthymematical. adj.** Having the form of an *enthymem*.

Encountered as they may be with handy *trokes* of syllogism, or *enthymematical* conclusion.—*Hooker, Fabrica of the Church*, p. 63: 1604.

**Entice. v. a.** [N.Fr. *enticer* = excite, provoke.] Allure; draw by blandishments or hopes to something sinful or destructive; attract.

The readiest way to entangle the mind with false doctrine, is first to *entice* the will to wanton living.

—*Jerome, Scholasticus.*

If a man *entice* a maid that is not betrothed, he shall surely endow her to be his wife.—*Exodus*, xiii. 16.

For ill to ill superlative  
Are easily *enticed*,  
And entertain amendment,  
As the Gergesites did Christ.

*Enticing* all to listen, and be drown'd. *Graville.*

**Enticement. s.**

1. Act or practice of alluring (to ill).

And here to every thirsty wanderer,  
By sly *enticement* gives his baneful cup,  
With many murmurs wait. *Milton, Comus*, 524.

2. Means by which one is allured (to ill); blandishment; allurements.

Beware of them, Dianna; their promises, *enticements*, entice, tokens, and all these engines of lust, & the things they go under: many a maid hath been seduced by them.—*Shakespeare, All's well that ends well*, iii. 2.

In all these instances we must separate intimacy and *enticements* from deceit or violence.—*Jeremy Taylor, Rule and Exercise of Holy Living.*

**Enticer. s.** One who entices or allures: (generally in a bad sense).

Rose-coloured cheeks are of themselves potent *enticers*. *Barton, Discourse of Melancholy*, p. 95.

1. Whole; undivided; unbroken; complete in its parts; full; comprising all requisites in itself.

**Spelt with *i*.**

The lawful power of making laws, to command whole politick societies of men, belongeth so properly unto the same *entire* societies, that for any prince to exercise the same of himself, and not either by express commission immediately and personally received from God, or else by authority derived at the first from their consent upon whose persons he imposes laws, it is no better than mere tyranny.—*Hooker, Ecclesiastical Polity.*

2. Unmingled; unalloyed.

Wrath shall be no more

Thenceforth, but in thy presence joy *entire*.

*Milton, Paradise Lost*, iii. 264.

3. Impartial.

*Prior*.  
No man had ever a heart more *entire* to the king, the church, or his country; but he never studied the easiest ways to those ends.—*Lord Clarendon, History of the Grand Rebellion*.

**5. ? Interior; internal.** [If this explanation be true, we have in the extract a fresh word, one derived ultimately from *in*, but more immediately connected with *interior*. The details, however, have not been sufficiently examined to justify a separate entry. Supposing the two words to exist, it is clear that their several senses may run into one another; in which case, the complication which occurs in Endow and Indue, and in several other words, presents itself. Under Entireness the explanation *intimacy* is Johnson's; and this, given as it is without any reference to *in*, is evidence in favour of the connection. *Entirely*, too, as used in Spenser, may mean the 'inner man'.]

Casting flakes of lust full fire,  
From his false eyes, into their hearts and parts *entire*.  
*Spenser, Faerie Queen, iv. 4. 48.*

**Entirely, adv.** In an entire manner; in the whole; without division; completely; fully.

General consent *entirely* altered the whole frame of their government.—*Swift*.

**? (Derivation and exact import doubtful.)**  
See remarks under Entire, 5.

Which when his pensive body saw from far,  
Great woe and sorrow did her soul assay,  
As weening that the sad end of the war,  
And gain to highest God *entirely* pray.  
*Spenser, Faerie Queen.*

**Entireness, s.** Attribute suggested by Entire.

**1. Totality; completeness; fullness.**  
But 1  
Should injure virtue, virtue, and destiny,  
Should I divide and discontinue so  
Virtue, which did in one *entireness* crow.  
*Bacon, Persius, p. 216.*

Doting antiquaries . . . more admire the rust or fragments of coins, than their splendour or *entireness*.—*Whitlock, Observations on the present Manners of the English, p. 216: 1654.*

In an arch, each single stone, which, if severed from the rest, would be perhaps defenceless, is sufficiently secured by the solidity and *entireness* of the whole fabric, of which it is a part.—*Boyle*.

**Spelt with i.**  
So shall all times find me the same:  
You this *intireness* better may fulfill,  
Who have the pattern with you still.  
*Donne*.

**2. Intimacy.** See Entire, 5.

True Christian love may be separated from acquaintance, and acquaintance from *entireness*.—*Bishop Hall*.

A little friendship with such is enough; the less communion with any of God's enemies, the more safety; and sure I am, that those who affect a familiar *entireness* with such, betray either too much boldness, or too little conscience.—*Junius, Sin atymatized, p. 77.*

**Entirety, s. [N.Fr. *entier*.?]** Completeness, Sometimes the attorney thrusteth into the writ the uttermost quantity; or else wretcheth down an *entirety*, where but a moiety was to be passed.—*Bacon, Office of Attention*.

This is the natural and regular consequence of the union and *entirety* of their interests.—*Sir W. Blackstone, Commentaries on the Laws of England*.

**Entirety, adv.** Considered by itself as a pure entity; abstracted from all circumstances. *Rare*.

Metaphysicians have here a noble field for their Vol. I.

abstracted flights, whether, according to Durandus, there be any divine concurrence in sin? Whether, with others, moral evil has any real essence, or real efficient cause, or only deficient? Whether there be any pure evil? Whether it be a privation of being, or a real positive being? Whether it has not some natural good for its subject, and so the *entirety* material act of sin be physically or morally good?—*Ellis, Knowledge of Divine Things, p. 340.*

**Entirety, adv.** See extract.

A thing is said to be taken or considered *entirety*, or 'secundum rationem', when considered unskilly, and precisely, according to what it is in itself, without any thing intrinsic; as, Peter, *entirety* taken, is Peter as a thing, a substance, a man, &c., without any regard to his being a lord, a husband, learned, &c.—*Chambers*.

**Entire, c. v.**

**1. Designate by means of a title; give a title or discriminative appellation to anything; superscribe, or prefix as a title.**

**2. Give a claim to anything.**

But we, descended from your sacred line,  
*Entired* to your heav'n and rites divine,  
Are banish'd earth.—*Depla, Virgil's Eclog.*

God discovers the martyr and confessor without the trial of flames and tortures, and will hereafter *entire* many to the reward of actions which they had never the opportunity of performing.—*Addams, Spectator*.

He *entired* himself to the continuance of the divine protection and goodness, by humiliation and prayer.—*Bishop Ath. Chap.*

Hardly even is the penitent sinner saved; thus difficult is that duty, by which alone he can be reconciled to his Creator, and *entired* to the mercies of the gospel.—*Rogers*.

This is to *entire* God's care how and to what we please.—*Locke*.

**Entire, s.** [L. Lat. *entitas*, from *ens*, -*entis*, pres. part. of *esse* to be; equivalent to the Greek *on*, *onion*, whence Ontology.

Its root, or at least a simpler form of it, *ens*—thing being, can scarcely be considered an English word, though it is by no means uncommon in works relating to logic. It generally, however, is used in combination with some other word which is, for the most part, Latin also. Milton, in his Vacation Exercise, has *entium ens*. The phrase *ens rationis* is the commonest, meaning an object existing only as a mental, or as an approximation to a mental, image. Of the derivations from *ens* the use is irregular; chiefly because two other words are sufficiently allied to it to create complications—*Exist* and *Be*. The former, from the more definite character of its elements (*ex*—out, and *sto*—stand) suggests a notion of reality which is wanting in the root of *ens*; whilst *Being*, though connected with *am*, *is*, and the other congeners of *ens*, by the artificial system of our common grammars, is from a wholly different root, that of the Lat. *fi*, and the Gr. *gignō*, wherein a notion of 'becoming' or 'growing up as to become' anything is suggested. Besides which the termination -*ing* is ambiguous. Only when it means a 'thing in existence' does it correspond with the *ens*. When a verbal abstract, as from *be-ung*, it answers to *entia*, if such a word exists.

Neither does *ens*, when compared with the Greek *on*, run exactly parallel to it. Though both are not only participles, but

participles from the same root, they differ in the fact of the Latin wanting, the Greek having, an article. Hence, the Latin equivalent to *on* or *on*—the existent, is not to be got out of *ens*. For further remarks on this point, see *Exist*.

For the last two syllables in *ent-ity* to have their full import, *entia* should differ from an *ens*, as *ent-itas*, *ent-itas*, and others differ from *ent-us*, *ent-us*, &c. The difference, however, is generally overlooked, and the negative compound *non-entia*, which is far commoner than the simpler term, means *non-ens*, or *id quod non est*.]

**1. Ideal conception.** (In the first of the following extracts we might read *entia rationis* instead; neither would the evidence of their imaginary character be much impaired if 'abstract' were omitted. We could not write *existences*; the word would suggest too much of a notion of reality: we might do so, however, in the second. In both the word is *plural*, a fact which indicates its departure from its proper abstract character.)

The words Nominalist and Realist came into use about the end of the twelfth century. . . . Scotus and his disciples were the great maintainers of realism. If there were no substantial forms, he argued, that is, nothing real, which determines the mode of being in each individual, men and brutes would be of the same substance; for they do not differ as to matter, nor can extrinsic accidents make a substantive difference. There must be a substantial form of a horse, another of a lion, another of a man. . . . These reasonings . . . were met by Ockham with others which sometimes appear more refined and obscure. He confined reality to objective things, denying it to the host of abstract *entia* brought forward by Scotus. He makes a universal to be a 'particular intention . . . of the mind itself capable of being predicated of many things, not for what it properly is itself, but for what those things are; so that, in so far as it has this capacity, it is called universal, but, inasmuch as it is one form really existing in the mind, it is called singular.'—*Addams, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries, pt. I. ch. iii.*

The conception, under which the Church holds her place in that connection, represents the combined result of two distinct but harmonious ideas. The first of these is that developed by Coleridge with so much depth and power, the idea of a national clergy as a part inherent in every well-constituted body politic; a class, that is to say, whose function it shall be, by study and by the communication of its results, to sustain and to propagate the sense of the unseen world, of a living supreme intelligence of truth, of beauty either in matter wholly imaginative or mixed, and of all those incorporeal *entia* which form the required counterpoise to our material necessities, and prevent us from being wholly absorbed in our efforts to supply them. *Glendon, The State in its Relations with the Church, ch. vi. sect. 1. § 3.*

**2. Character of existence.**

Where *entia* and quiddity,  
The souls of defunct bodies fly. *Butler, Hudibras*.  
God's decrees of salvation and damnation, both Romish and reformed, alike to men's particular *entia*, absolutely considered, without any respect to demeanours.—*Hammond, On Eudamotia*.

**3. The following denies a process to be an entity; the doctrine of the editor being that the contemplation of a process, as a mode, gives us the nearest approach to one, the mind being rather an *ens*, and the necessity for drawing a distinction between the simpler form and the derivative being recognized. With a word dealing in the exhibition of minuter shades of meaning the distinction is needed.**

Idealism assumes that minds are *entia*; that ideas are *entia*; and that ideas exist in minds. . . . Let it be granted that the belief—mind is an *entia*, is a belief proved by the inconceivableness of its negation to invariably exist (which is not the fact; for mind is conceivable as not an *entia*, as a process); let it be granted that it has the like authority for the belief—ideas are *entia* (which is not the fact; for ideas are conceivable as phases of the process, mind); and let it be granted, that for its belief—ideas exist in the mind, &c. *Herbert Spencer, Principles of Psychology*.

#### 4. Sensible amount; enough to constitute a reality.

All eruptions of air, though small and slight, give an *entity* of sound, which we call crackling, puffing, and spitting; as in hay salt and hay leaves cast into the fire.—*Bacon*.

This notion of reality, for which the congeners of Existence are better suited, seems to be implied in the following.

Dear hope! earth's dowry and heaven's debt,  
The *entity* of things that are not yet;  
Subtle, but surest being. *Crashaw*.

#### 5. In the following the simple sense seems complicated by the connection of *en-* with *in-*, superadded to the association of ideas suggested by *ex*.

When we were when the foundations of the earth were laid, when the morning stars came together, and all the sons of God shouted for joy, his must answer who asked it; who understands *entity* of preordination, and beings yet unbegotten; who hath in his intellect the ideal existence of things, and entities before their existence.—*Sir T. Browne, Christian Morals*, iii. 23.

In the next, *inherent quality* might be substituted.

Fortune is no real *entity*, nor physical essence, but a mere relative signification. *Booth*.

#### Entoil. *v. a.* Bring into toils or nets. *Rare*.

He cut off their land forces from their ships, and entailed both their navy and their camp with a greater power than theirs, both by sea and land.—*Bacon, New Atlantis*.

#### Entomb. *v. a.* Put into a tomb; bury.

Processions were first begun for the interring of holy martyrs, and the visiting of those places where they were entombed.—*Hooker, Ecclesiastical Polity*.

I think I could, with far less pain and reluctance, suffer my body to be buried alive in the cold earth, than so stark and stupid a conceit to entomb my soul.—*Dr. H. More, Notes on Psychical History*.

They, within the breast's vast womb,  
The choice and flower of all their troops entomb.  
*Sir J. Denham*.

Et sepulchri immemor stratis domos.  
We build us houses where we should entomb us.  
*Dryden, Don Juan*.

#### Spelt with *i*.

What communion had the Jews for the ceremony of odours used about the bodies of the dead, after which custom, notwithstanding, our Lord was contented that his own most precious blood should be entombed.—*Hooker, Ecclesiastical Polity*.

Mighty heroes' more majestic shades,  
And youths entomb'd before their fathers' eyes.  
*Dryden*.

#### Entombment. *s.* Burial; state of being shut up in a tomb.

The strictest imprisonment is far more tolerable than being shut up by a lax humour from profitable employment; this enchaineth a man hand and foot; this is beyond any imprisonment; it is the very entombment of a man, quite sequestering him from the world, and debarring him from any valuable concerns therein.—*Burrows, Sermons*, vol. iii. ser. xix.

Many thousands have had their entombment in the waters.—*Jr. H. More, Mystery of Golliwas*, p. 16: 1690.

#### Entomological. *adj.* Connected with Entomology.

My main object has been to draw attention to the fact, that the great obstacles which Nature has placed against the too rapid dispersion of animal life should be more strictly taken into account (as a matter of positive reality) than it is, during our investigations into entomological geography.—*T. V. Wallaston, On the Variation of Species*, ch. v.

#### Entomologist. *s.* Investigator in Entomology.

(For examples see extracts under next entry.)

#### Entomology. *s.* [(Gr. *ἐντομή* insect, *λόγος* word, principle.) Study of the natural history of insects.

Nothing would recommend entomology more than some neat plates, that should well express the general distinctions of insects, according to Linnaeus.—*White, Natural History of Selborne*, p. 91.

After the works of Ray, Lister, and Pictet, the intelligent entomologists of our own country, . . . the name of Hume ought perhaps to have been introduced. . . . The works of Hume in France contributed materially to facilitate the study of entomology on the continent. . . . These papers immediately preceded the publication of the first work, which the celebrated Linnaeus presented to the world.—*Rees, Cyclopaedia*, in voce.

This definition and nomenclature of the bee's tropid is indispensable for conveying the results of such comparisons as those which enabled the venerable Kirby to enrich entomology with so valuable

an accession of knowledge as is contained in his Monographia Apum Anglie, a work which the young entomologist may take as a model.—*Owen, Lectures on Comparative Anatomy*, lect. xvii.

#### Entomotrachea. *s.* and *adj.* Belonging to, or member of, the class Entomotrachea.

Entomotrachea. *s.* pl. entomotrachea. [(Gr. *ἐντομή* insect, *τράχεια* shell.)] In Zoology. Member of a class of crustaceous animals represented in the English fauna by the water-flea and other small animals like it, and falling into numerous divisions and subdivisions. For a more general import, see Malacostraca.

When we come to the coal-measures, the Malacostraca disappear; but we then find the gigantic entomotrachea called the King-crab; thence down to the lowest strata in which any trace of animal life has been found, the crustaceous class is exclusively represented by entomotrachean species, and more particularly by a peculiar form of Entomotrachea, which became extinct before the coal-measures were deposited. . . . The distinction between the Entomotrachea and Malacostraca, in the numerical character of the segments of the body, is of the first importance in determining the affinities of these ancient extinct crustacea, called Trilobites. . . . Professor Emmerich remarks the Trilobites as a peculiar order, connecting the Malacostraca with the Entomotrachea, but more nearly related to the latter. He thinks them allied to the Malacostraca by their crust-like shell, and by their not possessing simple eyes together with compound ones; but this opinion is rare even in the Entomotrachea. It denies the Niphroura and the Phyllofoda to be the two orders of Entomotrachea to which the Trilobites are united by the nearest characters of affinity.—*Owen, Lectures on Comparative Anatomy*.

#### Entomotracheous. *adj.* Belonging to, or connected with, the Entomotrachea.

(For example see extract under preceding entry.)

#### Entortillation. *s.* [(Fr. *entortillement*; from Lat. *tortilis*—capable of being twisted.)] Turning into a circle or round figure.

Willine that those which should work in the borders [of the table,] raisins, flowers, and wrappings, entortillations, and such like, should amuse themselves only for beautifying and decoration; and what was to be plain should answer to the measure and dimension; and that in all these things they should be exquisitely careful.—*Doune, History of the Septuagint*, p. 17: 1693.

#### Entower. *v. a.* Confine in the Tower. *Rare*.

#### Entozoic. *adj.* Relating to, connected with, or constituted by, Entozoa.

In both the infusorial and entozoic classes the body assumes a more perfect linear and bilateral form as the species advance in the scale of organisation.—*Owen, Lectures on Comparative Anatomy*, lect. xi.

#### Entozoologist. *s.* Investigator of the natural history of the entozoa.

This great entozoologist [Rudolphi], who devoted the leisure of a busy life to the successful study of the present univerting class, divided the previously-named entozoa here associated in the class Stercorinina, into four orders.—*Owen, Lectures on Comparative Anatomy*.

#### Entozoon. *s.* plur. entozoa. [(Gr. *ἐντὺς* within, *ζῷον* animal.)] In Zoology. Intestinal worm.

The geographical distribution of the human Entozoa is, likewise, opposed to the doctrine of their spontaneous origin. The organic particles, or alimentary mucus of a Swiss and Dutchman, are not so distinct in their nature as to account for the difference in their tapeworms. Yet no Swiss that never left his native mountains ever had a Tænia solium, and no Dutchman, the constant resident of his swamps, ever had a Bothriocephalus latius. But a native of either of these countries may be infected by the tapeworm peculiar to another region, if he sojourn there, just as the English sailor may be attacked by the Guinea-worm, if he visits the tropical regions where that entozoon is common. The great anatomist Boerhaave suffered from a Bothriocephalus latius. Now he was a German; but it was ascertained that he paid occasional visits to a friend in Switzerland.—*Owen, Lectures on Comparative Anatomy*, lect. iv.

In no class of animals has the origin from equivoal generation been more strenuously contended for than in regard to the entozoa. The great entozoologists Rudolphi and Bremer were advocates of this doctrine. . . . The advocates for the equivoal generation of the entozoa suture the fact, that herbivorous animals are not less subject to entozoa than carnivorous ones; and how, they inquire, could

the ova of entozoa be preserved in the water that serves as the drink of such animals? Or how, having become dried in the air, could such ova afterwards resume the requisite vitality for embryonic development?—*Ibid.* lect. vi.

#### Entraill. *v. a.* Interweave. *Rare*.

Over him, art striving to compare  
With nature, did an arbor green dispart,

I stood entrance'd, and had no room for thought;  
But, all o'erpower'd with raptures of bliss,  
Was in a pleasing dream of paradise.  
*Dryden*.

#### Entrap. *v. a.* Ensnare; catch in a trap or snare; involve unexpectedly in difficulties or distresses; entangle.

Henceforth too rashly on that gulfed net;

5. In *Law*. See *extract*.

By help of such confederacies, parties were enabled to make violent *entries* upon the lands they claimed, which the law itself could hardly be said to discourage. . . . If a man was dispossessed of his land, he might enter upon the dispossessor, and restate himself without course of law. In what case this right of *entry* was taken away, or toll'd, as it was expressed, by the death or alienation of the dispossessor, is a subject extensive enough to occupy two chapters of Littleton. What relating to our inquiry, is that by an *entry*, in the old law-books, we must understand an actual re-possession of the dispossessor, not a suit in ejectment, as it is now interpreted, but which is a comparatively modern proceeding. The first remedy, says Britton, of the dispossessor is to collect a body of his friends, and without delay to cast out the dispossessor, or at least to maintain himself in possession along with them. This *entry* ought indeed . . . to be made peaceably; and the justices might assemble the posse comitatus, to imprison persons entering on lands by violence; . . . but these laws imply the fact that made them necessary.—*Hallam,*

in which way Chaucer also employs it. — 'About the  
king ystondin *environ* Attendance, diligence, &c.'  
(*Court of Love*, ver. 1631.) He uses also the verb  
*environ* to surround. Harriet calls *environ* 'a French  
word made of the Latin, quasi in gyro.' (Ave. 1589.)  
And Coquerel uses in the old French verb *environner*,  
the same, he says, as *environner*. *Tobin*.]

**Environment, s.** Surrounding.

As with every inanimate object whose state has

We have mentioned Cesar Borgia. . . . On two im-  
portant occasions Machiavelli was admitted to his  
society. . . . From some passages in The Prince, and

writers have supposed a connection between these  
remarkable men, much closer than ever existed.  
This *envoy* has even been accused of prompting  
the crimes of the cruel and merciless tyrant. — *Mor-*

And with new orders are commanded back.  
*Sir W. Blackmore*.

4. A French rather than an English word;  
often preceded by the definite article.)

Generally an address to either a whole  
composition or some part of it, with which  
it is supposed to be sent into the world.  
(In being addressed to the book, rather  
than to a patron, it differs from a *dedica-*  
*tion*; and in being written by the author,  
rather than by one of his friends, from a  
*recommendatory poem*. It generally comes  
at the end of a work though not neces-  
sarily; since the first two lines of Ovid's  
Tristia give in fact, though not in name, a  
genuine *envoy*.)

'Parce, nec invades, sine me, liber, ibis in urbem  
Hic mihi! quod domino non licet ire tui.'

It is found, too, more frequently in poetry  
than in prose, though, again, not exclu-  
sively.)

It will be seen . . . that the Blind Minstrel is a  
vicious versifier. . . . As a specimen of his graver  
style we may give his *envoy* or concluding lines:

Suppose that be barren of eloquence;  
Go, worthy look, full of self-love;  
But in language of help thou hast great need.'

his ways. — *Proverbs*, iii. 31.

In seeking tales and informations  
Against this man, whose honesty the devil  
And his disciples only *envy* at,  
Ye blew the fire that burns ye.

*Shakespeare*, *Henry VIII.* v. 2.  
He that loves God is not displeased at accidents  
which God chooses, nor *envies* at those gifts he be-  
stows. — *Jeremy Taylor*.

Who would *envy* of the prosperity of the wicked,  
and the success of persecutors? — *Ps.*, *Rate and*  
*Reverence of Holy Living*.

**Envy, s.**

1. Pain felt and malignity conceived at the  
sight, or repining accompanied by desire  
for the possession, of the excellence or  
happiness of another.

*Envy* is a repining at the prosperity or good of  
another, or anger and displeasure at any good of an-  
other which we want, or any advantage another hath  
above us. — *Reg.*, *Wisdom of God manifested in the*  
*Works of the Creation*.

*Envy*, to which the ignoble mind's a slave,  
Is emulation in the learn'd or brave. *Pope*.

He [Wharton] had a peculiar way of disarming  
opponents which moved the *envy* of all the duellists  
of his time. His friends said that he had never  
given a challenge, that he had never refused one,  
that he had never taken a life, and yet that he had  
never fought without having his antagonist's life at  
his mercy. — *Maccarty*, *History of England*, ch. xz.

opinion and bruit, how he had been put to death  
privily. — *Bacon*.

5. Thing envied.

We are grown out of humour with the English  
constitution itself; this is become the object of the  
animosity of Englishmen. This constitution in  
former days used to be the *envy* of the world; it  
was the pattern for politicians; the theme of the  
eloquent; the meditation of the philosopher in every  
part of the world. *Maccarty*, *Critical and His-*  
*torical Essays*, *Italian's Constitution and History*.

Two mutually enfolded; Love, the third  
Between us, in the circle of his arms  
*Enwound* us both. *Tennyson*.

**Enwomb, v. a.**

1. Make pregnant.

Me then he left *enwomb'd* of this child,  
This luckless child, whom thus ye see with blood,

2. Bury; hide as in a womb.

*Sidley*.

**Enwrap, v. a.** Involve.

For another man to yield such unlawful aid, is no  
better than a foul affront of publick justice, and *en-*  
*wraps* the agent in a partnership of crime. — *Bishop*  
*Hall*, *Couns of Conscience*.

In thy fear, my God, in hope, and love, and con-  
fidence, and peace, and every limb and ingredient of  
happiness *enwrapped*. — *Donne*, *Devotions*, p. 133.

Spelt with i.

And over them Arachne high did lift  
Her cunning web, and spread her subtil net,  
*Enwrapped* in foul smoke. *Spenser*, *Faerie Queene*.

Covering discovers your quick soul; that we  
May in your through-shine front our heart's thoughts  
see. *Donne*.

The case is no sooner made than resolved; if it be  
made not *enwrapped*, but plainly and perspicuously.  
— *Bacon*.

The possibility of the word in the fol-  
lowing extracts being an error for *enrap* —

enrapture has been suggested. Either sense will suit; but *enwrap* is the better word.

This pearl she gave me, I do feel 't and see 't;  
And though 'tis wonder that *enwraps* me thus,  
Yet 'tis not madness.

Shakespeare, *Twelfth Night*, iv. 3.

Spelt with *i*.

For if such holy song

Insurp our fancy long,

Time will run back, and fetch the age of gold.

Milton, *Ode on the Nativity*, 133.

[The length of the observations upon the prefix *En-*, of which the necessity as suggested under that entry is the excuse, made it necessary to divide the criticism. It is only the *En-* augmentative that has been disposed of. The *En-* inclusive is considered here; i.e. under the last word of the series which illustrates it.

*Enwrap* is (1) purely English, as opposed to Latin, Norman, French, or Italian; is (2) rarely spelt otherwise than with *i*; and is (3) a word wherein the inclusive import of the prefix is eminently evident. *Entwine* (intwine) and *Enweave* (inweave) imply *intermixture* and *inclusion* only so far as the two terms suggest each other. But *Enwrap*, like *Engrave* and *Entomb*, conveys the notion of *inclusion pure and simple*; meaning *in a wrapping*, *in a grave*, *in a tomb*. Engulf only approaches this accuracy in the way of the expression of inclusion; *Enthroned* may mean *on* or *in*, according as the regal chair is like an *elbowchair* or a *woolbach*.

Taking, then, *En(or in)wrap*, and *En(or in)tomb*, as typical words, and asking how they ought to be spelt, there is no doubt as to two questions: (1) whether the *In-* is English; (2) whether it is inclusive; both being answered in the affirmative. This being the case, they apparently constitute a precedent and analogy for others. But is the combination English? In respect to its elements taken separately, Yes; in respect to the order of their arrangement, or sequence, No.

Whoever looks back upon the pages which immediately precede this, will find that the *In-* inclusive, like the *In-* intensive, has been ignored as an English prefix. He will also find that in nearly all the preceding instances the composition has given *Verbs with the accent on the second syllable*. This is important. Few Substantives have begun with *En-*, and no words wherein the prefix is accented.

The only true compounds of the English *In-* are Nouns; and these, when *disyllabic*, are accented on the first syllable. Such are *Income* and *Inlet*, the typical words of the class.

It is submitted that the rule which covers the most details is the following, founded upon the difference between the Adverb and the Preposition. The import of the Adverb is modal in its most general sense; i.e. as when we say a man *goes in* or *enters* (without naming the thing entered), or *goes out* or *makes an exit* (without naming what he goes out from). In Latin this would be *ingreditur* and *egreditur*, simply. The import of the Preposition, modal also, superadds the name of the object that determines the mode, and tells us *what* he went *in* (*to*), or *what* he went *out* (*from*). It always implies a Substantive in an oblique case, which, in grammatical language, it governs. Hence the rule in English (the details of its application in Latin being, though important in a Latin grammar, irrelevant here), that whilst the Adverb may

either precede or follow the Verb, the Preposition must precede the Noun it governs, or, in other words (except for certain rare and exceptional rhetorical cases), follow the Verb. Thus, whilst we say either 'This is *badly* done,' or 'This is done *badly*,' we can only say 'This comes *from* London,' not, 'from-comes London,' or even 'from-comes *from* London.' That between '*badly* done' and '*done badly*' there is a shade of difference in the way of import is not denied. It is only asserted that, as a matter of formal grammar, the two combinations are equally English, while the other is pronounced to be formally impossible.

This, however, carries us but a short way, inasmuch as both *badly* and *from* are extreme cases. The real complication arises from the fact of most of the Prepositions being equivocal or ambiguous. Deprive a Preposition of its case, or, in other words, use it indefinitely and without naming an object, and it becomes an Adverb. To *go in* is to *enter*; to *go up* is to *ascend*. To *fall into* a pit is Prepositional; to *fall in with* a person is to *agree with him*, or to *meet him*, and Adverbial. Yet *in* is originally Prepositional, just as truly as *badly* is Adverbial. Now the extent to which each particular Preposition is also Adverbial varies with the word.

*From*, as has just been stated, is the least Adverbial of any, being wholly Prepositional. We cannot even say *come from*, *fall from*, or the like. In other words, it never enters into such combinations as those which give *come to*, *lay by*, or *sink in*. The reason for this, probably, lies in the existence of an Adverbial equivalent in *forth*, and its congeners; *go forth* being an approximate equivalent to the Latin *egredi* and *progređi*.

*To* is in a different category; being more Adverbial, or less Prepositional, by one degree. We can say *go to*, *fall to*, and the like; in which there is, generally, a slight change of import: but we cannot say *to-flight*, *to-come*; though the Germans can, e.g. *zuflucht* = refuge.

With *In*, the word under notice, we can do what was done with *to*, and one thing more. We can say *come in*, *fall in*, *lay in*, and the like; and we can also say *income* and *inlet*. But these words are Nouns, not Verbs, and they are (as aforesaid) accented in a different manner from *En(in)grave*, and *En(in)tomb*. The second element, however, is either a Verb in form, or a Verbal, *income* = incoming. Compare this with the Latin *in* in *incido* and *ingredior*. In '*incidit in* Seyllum' we have it twice over; once as an Adverb, and again as a Preposition. In '*ingreditur* tectum' we have it, subject to certain observations which will appear under *In to*, as both.

*Out* (it is only necessary to notice the words which illustrate the rule) stands to *In* as *In* to *To*. It goes one degree further in the direction of the Adverb. It gives *fall out* (= quarrel); *outlet* (analogous to *inlet*); and, in addition to these, *outrôte*, whereof the result is a Verb with an accent on the last syllable. The same is the case with *over*, *under*, and others; *look over*, *overthrow*, *overlook*, *undertake*, *undertaking*, and the like.

1. To recapitulate. It is only as Adverbs that words like *to*, *in*, &c., enter into composition.

2. The extent to which they do so varies with the word.

3. In doing it there are three degrees; (1) the first giving only a Verb, followed by the Adverb; (2) the second the preceding combination, with the addition of one constituted by a prefix and a Noun; (3) the third both the preceding combinations, with the addition of words like *outrôte* and *outrôte*.

4. *In* belongs to the second class. Hence, the only true compounds of *in-* are words like *Income* and *Inlet*.

By a slight extension of these remarks, we may clear the ground in another direction, and save some notices which would otherwise be given under *In-*. Here we have, in a few formations, the Latin *in-*, in *in-nocens*, used instead of the English *un-*; i.e. applied as a prefix to words of English origin. Though this is simply bad writing, it is not in the category with the compounds under notice. Between *in-* and *un-* there is no confusion either of sound or spelling; so that no question as to the propriety or practicability of removing or recasting them exists.

If what has been said be true—and the only objection that lies against it is the improbable doctrine that though such formations as *ingrave* are impossible now, they may have been current in an earlier stage of the language, combined with the fact that in the allied languages they actually exist (*eingehen* = go-in, in-go, &c., in German) it follows that, except as derivatives from the Latin, Italian, and Spanish, no compound in *In* exists in accurate English; and such, on the whole, is the fact. Still there are a few outlying cases. A Verb standing in the same relation to *income* as *surrey* does to *surrey* might perhaps be defended by the writer who resorted to it. Again, *Inbreeding* (how it was sounded is known only to the coiner) has been seen by the editor in a work which, in respect to its matter, is preeminently critical. It means (*in-and-*) *in-breeding*. Whether good or bad, however, the principle that gives it is one which is wholly different from those under consideration. Finally, *Indebted* is, probably, suggested by *in debt*. *Inglorious* = notice (*in-heed-taking*) is a good Danish word so formed. See also *Intrench*.

The principle suggested by *income* and *income*, except that it is reversed in its application, is the justification for the entry of *enlay* as a Noun.

That the compounds of *in-*, with an English verb to follow, are numerous, has already been seen; and though many of them were made carelessly after the loose analogy of the French *en-*, or for the sake of the metre, there is little doubt that in many the notion of inclusion was intended. The barbarous form *inwent* exists, and, unless the editor's memory deceives him, in a recognized authority.

Lastly, there are certain words wherein the general character is Latin, though the exact Latin word would be difficult to find in any good author. Such are the words in *-ate*. Hence, whilst *endoctrine* is entered under *en-*, *indoctrine* begins with an *i*.

To conclude. Some of the words spelt with *e* are as undoubtedly and as generally sounded with *i*, as *Jem* is pronounced *Jim*. In one of these, *Impeach*, the phonetic principle has prevailed; thereby con-

stituting a precedent for similar recognitions of the actual sound as opposed to the historical Etymology. To spell, however, the whole with *i* would be objectionable. To alter the spelling of each word as it changed, would be to recognize the phonetic principle beyond the likelihood of its being adopted. As it is, a near approach to uniformity is obtained at the price of a slight departure from the actual representation of the sound; it being always remembered that, in cases like the present, the spelling goes far towards determining the sound.

**Enwrapment** *s.* Covering; wrapper.

The whole paragraph should be thus translated: they wratched together a foliage of the fig-tree, and made themselves enwrapments, i.e. they wrapped themselves up in them.—*Shuckford, Creation and Fall of Man*, p. 203.

**Enwreath** *v. a.* Surround us with a wreath. (spelt with *i*.)

Bind their resplendent locks *enwreath'd* with  
beams. *Milton, Paradise Lost*, iii. 361.  
Nor less the palm of peace *enwreathes* thy brow.  
*Thomson*.

**Enwrought** *adj.* Adorned with work. (spelt with *i*.)

Next Camus, reverend sire, went footing slow,  
His mantle hairy, and his bonnet sedge,  
*enwrought* with flowers daint, and on the edges  
Like to that sanguine flower, interweld with woo.  
*Milton, Lycidas*, 103.

**Éocene** *adj.* [Gr. *ἠώς* = the goddess of the dawn or morn, and *καιός* = new.—] This is not only a word of recent coinage, but a successful one; the department of scientific enquiry to which it belongs being geology. It was suggested by Sir C. Lyell, along with two others, Miocene and Pliocene, to denote the age of certain tertiary deposits as measured by the proportion borne, in their fossils, of the existing to the extinct species. Where the existing, recent, or new (*καιός*) species were decidedly preponderating (say two thirds of the whole), the division was *Pliocene* (*πλιόσιος* = most) and *Post-Pliocene* have since been engrafted on this stock, denoting the beds in which the extinct species are so few and exceptional as to give us the exact opposite of the Eocene period, i.e. the wane of the extinct Fauna and Flora.]

**In Geology.** Oldest group of the tertiary formation.

We trace the progressive diminution of the existing species of gastropodous Mollusca by their fossil shells through the descending strata of the tertiary periods of geology, beyond which such indications become very doubtful and obscure. In the oldest tertiary deposits, not more than three and a half per cent. of the remains of any class of Mollusca have been identified with species now living. From this fact, which indicates the dawn of the existing state of the testaceous fauna, the term *Eocene* is applied to these strata: in the superimposed or Miocene tertiary beds there are about seventeen per cent. of fossil shells, identical with recent species; in the deposits of a third or Pliocene era from thirty-five to forty per cent.; and, in still more modern Pliocene formations, the older tertiary shells have almost disappeared, and the number of species identical with those now living is from ninety to ninety-five per cent.—*Owen, Lectures on Comparative Anatomy*, lect. xviii.

**Æolian** *adj.* [Lat. *Æolus* = god of the winds.] Specially applied to a musical instrument, the chords of which vibrate under the simple action of the wind.

From poetry and music united, we have a right to expect pathos, sentiment, and melody, and in a word every gratification that the tuteal ear can bestow. But in sweetness of tone the best singer is not superior, and scarcely equal, to an *æolian* harp,

to Vischer's lute, or to Giardin's violin.—*Dentice, Essay on Poetry and Music*, p. 1.

**Æolipile** *s.* [Lat. *pila* = ball.] Ball or sphere in which water is heated, and from which the rarefied air escapes through a pipe.

Considering the structure of that globe, the exterior crust, and the waters lying round under it, both exposed to the sun, we may fitly compare it to an *æolipile*, or an hollow sphere with water in it, which the heat of the fire rarefies, and turns into vapours and wind.—*T. Burnet, Theory of the Earth*.

**Æp-, Æph-, Æpi-**. Three forms taken by the Greek preposition, *ἐπι* = on, upon; the first being used before a vowel, the second before an aspirate, and the third before a consonant. Its proper power in composition is adverbial, in which case it has considerable latitude of import, meaning not only superposition, but addition.—*Epicyle*, for instance, meaning not anything *on a cycle*, or circle, but a *cycle*, or circle, *in addition*. Hence, by an easy transition, it takes the power which it has in *Epitaph*,—an address *after*, as opposed to a *Prologue*, or address *before*, a dramatic representation.

*Prologues and Epilogues* are *λόγοι* which precede or follow something else; and not something that precede or follow a *λόγος*. If they were this, the construction would be prepositional. Is it *æper* so? On the first view it seems hazardous to ignore such an example as *epitaph*, which so evidently means something *on a tomb*, rather than a *tomb on, or superficial to, or in addition to*, anything else. But as the origin of the word is in the adjective *ἐπικτατός*, rather than in *ἐπί-+τάφος*, the prepositional character is doubtful; and *epitaph* is the most plausible example that can be given. *Epidermis* = a skin on a skin, and *Epiphyte* = a plant on a plant, are merely curious from their apparent ambiguity.

**Æpast** *s.* [Gr. *ἐπακτός* = brought on; from *ἐπι* on, *ἀγω* = lead.] See extracts.

As the cycle of the moon serves to shew the *epacta*, and that of the sun the dominical letter, throughout all their variations; so this Dionysian period serves to shew these two cycles both together, and how they proceed or vary all alone, till at last they accomplish their period, and both together take their beginning again, after every 5322 year.—*Moller, Discourse concerning Time*.

A number, whereby we note the excess of the common solar year above the lunar, and thereby may find out the age of the moon every year. For the solar year consisting of 365 days, the lunar but of 354, the lunations every year get 11 days before the solar year; and thereby, in 19 years, the moon completes 20 times 12 lunations, or gets up one whole solar year; and having finished that circuit, begins again with the sun, and so from 19 to 19 years. For the first year afterwards the moon will go before the sun but 11 days; the second year 22 days; the third, 33 days; but 30 being an entire lunation, cast that away, and the remainder 3 shall be that year's *epact*, and so on, adding yearly 11 days. To find the *epact*, having the prime or golden number given, you have this rule:—

Divide by three; for each one left add ten;

Thirty reject: the prime makes *æpast* then.

*Harri.*

**Æpagoge** *s.* (the final *c* sounded.) See Induction.

**Æpagoge** *adj.* [Gr. *ἐπαγωγή*; from *ἐπι* = on, and *ἀγω* = lead, bring.] Inductive; the two words nearly translating each other. See Induction.

**Æpaulet** *s.* [Fr. *épaulette*; which formerly signified the wing of a gown, doublet, &c.] Ornament for the shoulder; shoulder-knot.

Their old vanity was dazzled and adorned by military liveries, cockades, and *æpaulets*.—*Burke*.

**Æpaulet** *s.* [Fr. *épaulette* = shoulder.] See extract.

*Æpaulet* [is], in fortification, a sidewalk made either of earth thrown up, of bags of earth, gabions, or of fascines and earth. It sometimes denotes a manubiation and a square orillon, or mass of earth

faced and lined with a wall, designed to cover the cannon of a redoubt.—*Barri.*

**Æpœtic** *adj.* [Gr. *ἐπαυτικός*; *ἐπαινω* = praise.] Laudatory; panegyric. *Rare*.

In whatever kind of poetry, whether the epic, the dramatic, . . . the *æpœtic*, the heroic, or the epigram.—*Phillips, Theatrum Poeticum*, prol.

**Æphemeræ** *adj.* [Gr. *ἐπι* = on, for, *ἡμέρα* = day.] Diurnal; beginning and ending in a day; short-lived.

This was no more than a mere bubble or blast; and like an *æphemeræ* fit of applause.—*Sir H. Wotton, Life of Duke of Buckingham*.

He was far from the excess of a decabulatory, hebdomadal, or perendancy: *æphemeræ*, often.—*Bishop Morton, Epitaphy*, *æpœtic*, p. 112.

**Æphemerides** *s.* [from *æphemeris*, being in fact the plural of it; though formerly *æphemerides* was used as a noun of the singular number.] Astronomical tables showing the state of the heavens for every day at noon.

Let him make an *æphemerides*, read Suisset the calculator's works, Scatter'd calculations temperum, and Petavius his miscellany, till he understand them.—*Barrow, Anatomy of Melancholy*, p. 251.

In the singular. Account of the daily motions and situations of the planets.

When casting up his eyes against the light,  
Both month, and day, and hour he measur'd right;  
And told more truly than the *æphemeris*:  
For art may err, but nature cannot miss.

*Druiden, Nua's Tale*.

**Æphemerist** *s.* One who, consulting the stars, or studying either Astronomy or Astrology, uses an Ephemeris or Ephemerides.

**Æphemerous** *adj.* Beginning and ending in a day.

The *æphemerous* tale that does its business, and dies in a day.—*Burke, Reflections on the French Revolution*.

An old word revived by Burke. 'An *æphemerous* monster' occurs in Annotations on Glanville &c., in 1682, p. 12.—*Fold*.

**Æphesian** *s.* [*Ephesus*—the Asiatic city so called.] In the time of Shakespear this was a familiar term, the import of which is not exactly explained.

Speak from thy lanes military; art thou there?  
It is thine host, thine *Æphesian* calls.—*Shakespear Merry Wives of Windsor*, iv. 5.

**Æphitætes** *s.* Nightmare.

The *æphitætes*, or night mare, is called by the common people witch-riding. *Brand, Observations on popular Antiquities*.

**Æphod** *s.* [Hebrew.] Ornament worn by the Hebrew priests.

Which hang on herbs and flowers. *G. Sandys*.

Holmes, whose name shall live in *æpic* song,

While music numbers, or while verse has feet.

*Druiden*.

The *æpic* poem is more for the manners, and the tragedy for the passions.—*Id.*

**Æpio** *s.* Epic poem.

He [Mr. M'Pherson] brought forward his counterfeit *æpics*, [the alleged poems of Ossian], whose manifold defects and deformities were not so much pardoned for the beauties, thinly scattered, which they contained, as from the persuasion that they were the works of an ancient artist.—*Campbell, On the Ecclesiastical and Literary History of Ireland*, p. 170.

**Æpicæde** *s.* [Gr. *ἐπιήδειος* (*ἐπι* = on, *ἡδύς* = funeral solemnity); Fr. *épicede*; Lat. *epicedium*; which is, itself, sometimes used.] Funeral discourse or song.

We are yet in hope of somewhat to come forward, to the insupportable glory of the land, namely his worthy works of Antiquitate Britannica, et de illustrata viris, with *hys* epigrams and *æpicædes*.—*Id.*

*Æpicædes* and obsequies upon the deaths of sundry personages.—*Donne, Poems*, p. 240.

**Epicedian.** *adj.* Relating to, consisting in, or constituted by, an Epicede; elegiac; mournful. *Rare.*

**Epiceus.** *adj.* [Lat. *epiceus*, from the Gr. *epiceus* = common;] of both kinds; (chiefly used in *Grammar*, in which case it applies to those names of animals which are the same for both sexes. It is the name of a play of Jonson's (Epicure, or the Silent Woman) in which the point lies in the fact of a man passing for a woman. It is sometimes, also, applied to eunuchs and hermaphrodites.)

I know it and smile a harvest smile, like a stoic, or

A wiser *Epicurean*, and let the world have its way.  
*Tranquon, Maud*, iv. 4.

**Epicurean.** *adj.*

1. Pertaining to the sect of Epicurus.

Academicks old and new, with those  
Narcissus Peripatetics, and the sect  
*Epicurean*. — *Milton, Paradise Regained*, iv. 278.

2. Luxurious; contributing to luxury.

The up the libertine in a field of evens,  
Keep his brain fanning; *epicurean* coaks,  
Sharpen with chafless sauer his appetite.

*Shakespeare, Antony and Cleopatra*, ii. 1.

This ignominious dissoluteness, or rather, if we may venture to designate it by the only proper word, blackguardism of feeling and manners, could not but spread from private to public life. The cynical sneers, the *epicurean* sophistry, which had driven honour and virtue from one part of the character, extended their influence over every other. — *Morant, Critical and Historical Essays, Italian's Constitutional History*.

**Epicurism.** *s.*

1. Luxury; sensual enjoyment; gross pleasure.

The darts of devoutness, *epicurism*, and unmercifulness. — *Bishop of Chichester, Two Sermons*, serm. vi. 1570.

This our court, infected with their manners,  
Shows like a riotous house; *epicurism* and lust  
Make it a tavern or a brothel.

*Shakespeare, King Lear*, i. 4.

There is not half so much *epicurism* in any of their most studied luxuries, as a blessing fame at their mercy. — *Dr. H. More, Government of the Tongue*.

Some good men have ventured to call munificence, the greatest sensuality, a piece of *epicurism*. — *Catony, Sermons*.

2. Doctrine of Epicurus.

Infidelity, or modern Deism, is little else but revived *Epicurism*, Sadducism, and Zendicism. — *Waterland, Charge*, p. 75: 1732.

The first book of the Enquiry ends with a sentence far remote from irreligion and *Epicurism*. — *J. Walton, Essay on Pope*.

[The learned Waterland, to distinguish this more pointedly, writes the word *epicurean*; and the recent on *epicurism* in this sense, should be on the third syllable. This usage of the word is modern. Dr. Johnson takes no notice whatever of it. — *Idid*.]

**Epicurizes.** *v. n.* Become an epicure, or have a tendency towards epicurism (in any of its senses); devour like an epicure; play the epicure.

He thrifly improves the objects of his cruelty, spending them by degrees, and *epicurizing* on their pain. — *Falder, Italy State*, p. 448: 1618.

Those evil demons did, as it were, delicate and *epicurize* in them. — *Hallivell, Metamorphosis*, p. 101.

**Epicurizing.** *part. adj.* Tending towards

the doctrine of Epicurus.

The tree of knowledge mistaken for the tree of life. . . . *Epicurizing* philosophy, Antinomian liberty, under the pretence of free grace and a gospel spirit. — *Cudworth, Sermons*, p. 87.

**Epicyclo.** *s.* [Gr. *ἐπι* - on, *κύκλος* - circle.] In ancient Astronomy. Smaller circle whose centre is in the circumference of a greater; circle round the circumference of which a planet was supposed to roll, while the centre was carried along a deferent, or larger circle, of which the earth formed the centre.

In regard of the *epicyclo*, or lesser orb, wherein it moveth, the motion of the moon is various and unequal. — *Sir T. Browne.*

How they will wield  
The mighty frame; how build, unbuild, contrive  
To save appearances; how gird the sphere  
With centre and eccentric, scribbled o'er;  
Circle and *epicyclo*, orb on orb.

*Milton, Paradise Lost*, viii. 82.

We shall remark, however, that Ptolemy does not speak of the *epicyclo* in which the ancients supposed the planets moved, as having any real existence, but only as a theory invented 'to save the appearances.' — *Sharpe, History of Egypt*, ch. xlii.

**Epidemic.** *adj.* [Gr. *ἐπι* - on, *ἐπι* - people; Fr. *épidémique*.]

1. In Medicine. Invading or attacking the occupants of a district as a disease or murrain, and passing from one country to another, whether by contagion or infection, or carried by the atmosphere. (In this their comparatively transitory character, the Epidemic diseases are contrasted with the Endemic, or those which from being connected with either the soil or certain local conditions, are fixed more or less permanently in the district.)

It was conceived not to be an *epidemic* disease, but to proceed from a murrain in the constitution of the air, gathered by the predispositions of seasons. — *Bacon, History of the Reign of Henry VII.*

They could do nothing against the Insubrians, owing to an unusually rainy season, which filling all the streams, made the country about the Po impracticable, and occasioned *epidemic* diseases among the soldiers. — *Arauld, History of Rome*, ch. xlii.

The few cases of cholera at Southampton, and the fierce little outbreak at Epine, may very probably not be the precursors of an immediate *epidemic* attack, but they are, or should be, a warning to all people, professional or other, to put themselves and their patients in a position of defence, and to furnish up the old and examine the new weapons by which it is proposed to meet the disease. The hint becomes the more significant from the marked similarity of the cholera-track of the present year to that which has on former occasions been followed, after a twelvemonth's interval, by a regular invasion of *epidemic* cholera. — *Saturday Review*, Oct. 21, 1845.

2. Generally prevailing; affecting great numbers.

He ought to have been busied in losing his money, or in other amusements equally laudable and *epidemic* among persons of honour. — *Swift*.

His [Lord Wharton's] rank and abilities made him so conspicuous that in him we are able to trace distinctly the origin and progress of a moral taint which was *epidemic* among his contemporaries. — *Morant, History of England*, ch. 22.

**Epidemic.** *s.* Epidemic disease.

The other fatal *epidemic*, such as the plague, yellow fever, and small pox, have been, in general, the calamities more particularly, though not exclusively, connected with large towns, camps, or other congregations of men. — *Bos, Cyclopaedia*, in voce.

**Epidemical.** *adj.* Same as Epidemic.

1. Applied to diseases. See Epidemic, 1.

As the proportion of acute and *epidemic* diseases shows the aptness of the air to sudden and vehement impressions, the chronic diseases show the ordinary temper of the place. — *Granul, Observations on the Bills of Mortality*.

2. General; universal.

That great *epidemic* council, wherein every one from the peer to the plebeian hath an inclusive vote. — *Honell, Instructions for Foreign Travel*, p. 219: 1612.

They're citizens of th' world, they're all in all;  
Scotland's a nation *epidemic*. — *Cleaveland*.

There seems to be some informality *epidemic*. You direct yours to me in Mitre Court; my true address is Mitre Court Buildings. — *Lamb, Letter to Murray*.

**Epidemiological.** *adj.* Connected with, or relating to, Epidemiology.

**Epidemiology.** *s.* Doctrine of epidemic dis-

eases; method of investigating them. (This is given rather as the basis of the preceding than as a current word; the preceding being a word of recent coinage, as the name of the Epidemiological Society, instituted in 1843 for the investigation of the nature of epidemics.)

**Epiderm.** *s.* Epidermis: (in the following extract both forms are used.)

The integument in the non-mammal parasites of the human subject, and in almost all the order, is more or less smooth; it consists of a thin compact *epidermis*, and of a fibrous corium firmly attached to the outer transverse muscular fibres. The *epiderm* is homogeneous; i.e. it does not show the nucleated cellular structure. — *Owen, Lectures on Comparative Anatomy*, lect. vi.

**Epidermal.** *adj.* Epidermic.

Its usual plan is to invaginate itself between the *epidermal* membranes of the leaf, close to one of the edges. — *Kirby and Spence, Introduction to Entomology*, ii. 477. (Ord MS.)

The branch of anatomy which treats of the skeleton of vertebrate animals is designated Osteology, because in anthropology it relates exclusively to the bones and teeth. But the skeleton, according to its etymological signification of hard and dry parts, might apply to the hair and nails, and, indeed, the entire *epidermal* system. — *Owen, Lectures on Comparative Anatomy*, lect. ii.

**Epidermic.** *adj.* Relating to, or connected with, the epidermis.

\* *Epidermic* [means] relating to the epidermis; *epidermoid*, though introduced by Bichat and in general use, is ill-constructed. It should be *epidermatoid*. — *Hopner, Medical Dictionary*.

**Epidermis.** *s.* [Gr. *ἐπι* - on, and *δέρμα* = skin.] Cuticle; scarf-skin.

It [the skin of the negro] is more or less black according to the deposition of the pigment . . . is found in the common evils of the mucous layer of the *epidermis*, and not in special pigment cells, whilst the *derma* of the negro is like that of the European. . . . According to Flourens' former opinion, there was said to exist between the *epidermis* and *derma* an organ absent in the white, which contained the colouring matter: he has, however, now adopted the prevailing opinion that there is no difference in the structure of the skin between white and black men, a deposition of pigment also taking place in the former, though in lesser quantity. . . . Krause says that freckles and brown moles in the skin of Europeans are in structure like the *epidermis* of the negro. — *Gillies, Translation of Walde's Anthropology*, pt. I, sec. 2.

The clothing membrane, or *epidermis*, as it is called, varies much in texture in different plants, and even in different parts of the same plant. . . . It is the increased thickness and hardened texture of the *epidermis* which gives the leathery or woody leaves of evergreen plants their peculiar appearance and consistence, and enables them to withstand external influences so long. Young shoots, when they emerge from the bud, are clothed with a delicate *epidermis*. . . . The *epidermis*, in addition to its varied texture, presents us with a number of peculiar appendages; . . . of these . . . hairs are the most common. — *Holmfrey, Rudiments of Botany*, ch. I, sect. 5.

**Epidermoid.** *adj.* Resembling the epidermis. (For example see extract under Epidermis.)

**Epigastrie.** *adj.* Relating to, or constituted by, the upper part of the abdomen.

A minute portion of the small-pox virus introduced into the system, will, in a severe case, cause, during the first stage, rigors, heat of skin, accelerated pulse, hurried tongue, loss of appetite, thirst, *epigastrie* uneasiness, vomiting, headache, pain in the back and limbs, muscular weakness, convulsions, &c. — *Herbert Spencer, Rudiments of Biology*.

**Epigastrium.** *s.* [Gr. *ἐπι* - on, *γαστήρ* = belly.] In Anatomy. Upper and middle part or region of the abdomen, nearly coinciding with the pit of the stomach.

Pathologists have divided the abdomen into certain regions. . . . These regions are marked out by means of imaginary lines, drawn in horizontal and vertical directions. The horizontal lines, four in number, divide this cavity into three zones. The highest of these lines pass over the xiphoid cartilage; the second, by the margin of the tenth rib; the third, by the anterior and superior spine of the ilia; and the fourth, by the superior margin of the pubis: thus giving three zones, the *epigastrie*, the umbilical, and the *hypogastrie*. For the sake of additional precision, each of these zones is divided into segments by vertical lines, also four in number. . . . The vertical lines, . . . dividing the horizontal lines very nearly at right angles, give us nine regions on the anterior and lateral aspects of the abdomen, and six posterior regions. The anterior regions are the *epigastrie*, umbilical, *hypogastrie*, and right and left inguinal; the lateral regions are the right and left *hypochondrie*, and right and left

ilias. . . The form of the abdomen, although necessarily in some measure changed by marked variation of its bulk, may, nevertheless, be much altered without any decided difference in its size. Thus, it is somewhat changed in severe diseases of the respiratory passages, when the entrance of air into the lungs is obstructed; the epigastrium and hypochondria being then pressed inwards and upwards.—*Cupland, Dictionary of Practical Medicine, Abdomen.*

**Epiglottis.** *s.* [Gr. *ἐπι* = upon, *γλωττις* = aperture of the windpipe.] In *Anatomy*, Cartilage which covers the aperture of the windpipe. (*Epiglottic* and *Epiglottidean* are derivatives.) *Technical* or *scientific*.

(For example see extract under *Larynx*.)

**Epigram.** *s.* [Lat. *epigramma*; from Gr. *ἐπι* = on, *γράμμα* = writing = Lat. *superscriptio*.] Verses ending in a point or sting.

A college of witsackers cannot shut me out of my humour; dost thou think I care for a satire or an epigram?—*Shakespeare, Much Ado about Nothing*, v. 4.

What can be more witty than the epigram of Moore upon the name of Nicolson, an ignorant physician, that had been the death of thousands?—*Peacock, Of Poetry*.

I write

An epigram that boasts more truth than wit. *Gay*. His inventive was unimpaired and hard to be endured, although he was a less eminent master of sarcasm than his son, and rather overwhelmed his antagonist with the burst of words and vehement indignation, than wounded him by the edge of ridicule, or tortured him with the gall of bitter scorn, or fixed his arrow in the wound by the barb of epigram.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Lord Chatham*.

[In our old lexicography, 'epigram or superscription,' (Hudoe.) Coleridge, nearly a century afterwards, retained, in his translation of the French *épigramme*, this classical meaning; calling it, 'a short poem, wittily taxing a particular person or fault; also a title, inscription, or superscription.' *Todd*.]

**Epigrammatic.** *adj.* Suitable to, belonging to, constituted by, or having the character of, an epigram.

He is every where above conceits of epigrammatic wit and gross hyperbole; he maintains majesty in the midst of plainness; he shines, but glares not; and is stately, without ambition.—*Adams*.

He has none of those little points and puerilities that are so often to be met with in Ovid; none of the epigrammatic turns of Lucan; none of those swelling sentiments which are so frequent in Statius and Claudian; none of those mist embellishments of Tasso.—*Id.*

Those things are far indeed from being unimportant. . . . They show upon what kind of grounds the fabric of a great man's professional fame, as well as the purity of his moral character, were assailed by the unprincipled violence of party at the instigation of their ignorance, skulking behind a signature made famous by epigrammatic language and the boldness of being venturesome in the person of a printer, who gained by allowing dastardly slanders to set through him with a vicious course.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Lord Mansfield*.

**Epigrammatical.** *adj.* Same as Epigrammatic.

Our good epigrammatical poet, old Godfrey of Winchester, thinketh no ominous foretelling to lie in names.—*Chaucer*.

**Epigrammatist.** *s.* One who writes or makes epigrams.

Such a customer the epigrammatist Martial meets withal, one who, after he had walked through the fairest streets twice or thrice, chattering jewels, plate, rich language, came away with a wooden dish.—*Peacock*.

The epigrammatist [Martial] speaks the new their drunken principles.—*Jeremy Taylor, Rule Reasoners of Holy Dying*, ii. § 1.

A jest upon a poor wit, at first might have had an epigrammatist for its father, and been afterwards gravely understood by some painful collector.—*Bope*.

Among the buffoon poets of this age, is also to be reckoned John Heywood, styled the epigrammatist, from the six centuries of epigrams, or versified jokes, which form a remarkable portion of his works.—*Craik, History of the English Language and Literature*, i. 431.

**Epigraph.** *s.* [Gr. *ἐπιγραφή*; Fr. *épigraphe*.] Title; inscription.

[Dr. Johnson gives the Greek anglicized in *epigrapha*, a word of four syllables, as he places the accent on the second. But I take *epigraph* to be an old English word, merely with the superfluous final *a*, as was

formerly common, and intended, like *paragraph* or *autograph*, to be pronounced in three syllables.—*Todd*.]

**Epilepsy.** *s.* [Gr. *ἐπιληψία* = seizing, laying hold on.] Convulsion, or convulsive motion of the whole body, or of some of its parts, with a loss of sense; falling sickness; fits (in which sense the application of the word, in *Medicine*, is limited to those that depend upon disease of the brain, as opposed to *hysterical* and other fits of a less formidable character).

My lord is fell into an epilepsy:

This is the second fit. *Shakespeare, Othello*, iv. 1. Melancholy distempers are deduced from spirits drawn from that encephalitis; the phrenitis from choleric spirits, and the epilepsy from fumes.—*Sir J. Floyer, Prefatural State of the animal Humour*.

*Epilepsy* [is a] sudden loss of sensation and consciousness, with spasmodic contraction of the voluntary muscles, quickly passing into violent convulsive distortions, attended and followed by sopor, recurring in paroxysms often more or less regular. *Epilepsy* has been noticed by all the ancient writers; but by none so fully and accurately as by Aretæus. The sudden and frightful seizure of which it consists, induced them to refer it to supernatural causes; and hence originated several of the names which have been applied to it.—*Cupland, Dictionary of Practical Medicine*.

**Epileptic.** *adj.* Convulsed; suffering from, or subject to, epilepsy.

A plague upon your epileptic visage!

Smile you my speeches, as I were a fool?

*Shakespeare, King Lear*, ii. 2.

**Epileptic.** *s.* Person afflicted with, or subject to, epileptic fits.

*Epileptics* ought to breathe a pure air, unaffected with any steam, even such as are very fragrant.—*Arbuthnot, On the Nature and Choice of Aliments*.

With respect to the mental condition of epileptics during the intervals of their attacks, Dr. Reynolds concludes from his own observations: 1. That epilepsy does not necessarily involve any mental change. 2. That considerable intellectual impairment exists in some cases; but that it is the exception, and not the rule. 3. That women suffer more frequently and more severely than men. 4. That the commonest failure is loss of memory; and that this, if regarded in all degrees, is more frequent than integrity of that faculty. 5. That apprehension is more often found preserved than injured. 6. That ulterior mental changes are rare. 7. That depression of spirits and timidity are common in the male sex, but not in the female; that excitability of temper is found in both.—*Cupland, Dictionary of Practical Medicine*.

**Epileptical.** *adj.* Having the nature of, or disordered as by, an epilepsy; (Epileptic commoner).

In the previous use of some catastrophic solemnities, he became frantic and epileptical.—*J. Spence, Vanity of vulgar Prophecies*, p. 30: 1065.

**Epilogium.** *s.* [Gr. *ἐπιλογισμός*.] Addition in the way of chronological computation; excess in reckoning; intercalation. *Rare*.

Some reckon the epilogium from Cyrus; some from the seventh, others from the twentieth of Artaxerxes Longimanus; accordingly ending the weeks, some at the profanation of the temple by Antiochus, &c.—*Gregory, Pothana*, p. 154: 1650.

The Greek and Hebrew making a difference of two thousand years. . . . this epilogium must be deducted from the Hebrew, or superadded to the Greek.—*Ibid.*, p. 171.

**Epilogic.** *adj.* Having the nature of an epilogue.

These lines are an epilogic palinode to the last elegy.—*T. Warton*, in his edition of *Milton's smaller Poems*.

**Epilogize.** *v. n.* [in the extract the *u* is intrusive, having been introduced either for the sake of preventing the *g* being sounded as *j*, or from the noun.] Speak an epilogue.

The dances ended, the spirit epilogized.—*Stage-Direction in Milton's Comus*.

**Epilogize.** *v. a.* Utter as an epilogue.

I was rude enough to interrupt the laugh of applause with which the charming companion of my new acquaintance was epilogizing his witty rallery.—*Student*, i. 143: 1730.

**Epilogus.** *s.* [Gr. *ἐπιλογος*; Lat. *epilogus*.] Poem or speech at the end of a play.

If it be true that good wine needs no bush, 'tis true that a good play needs no epilogus; yet to good wine they do use good bushes, and good plays prove the better by the help of good epilogues.—*Shakespeare, As you like it*, i. Epilogus.

Are you mad, you dog?

I am to rise and speak the epilogus.

*Druides, Tyrannick Love*.

**Epitaph.** *adj.* Relating to, connected with, or produced in honour of, a victory. *Rare*.

The spoils won in battle were carried in triumph, while an epitaphic song was chanted.—*T. Warton, History of English Poetry*, dissertation. (Ord 38.)

**Epitaphic.** *s.* [Gr. *ἐπιτάφιος*, from *ἐπι* = upon, and *τάφης* = victory.] Song of triumph. *Rare*. They distinguish between the triumph and epitaphic, or triumphal hymn.—*Christian Antiquities*, ii. 118.

I certainly did not mean, that the Saxon minstrels had ever sung a triumphal epilogue on Hengist's massacre.—*T. Warton, Rotherby Inquiry*, p. 60.

**Epiphany.** *s.* [Gr. *ἐπιφάνεια* = manifestation; from *ἐπι* = show.] Church festival, celebrated on the twelfth day after Christmas, in commemoration of our Saviour's being manifested to the world by the appearance of a star, which conducted the magi.

And through thy poor birth, where first thou glorified'st poverty,

And yet soon after riches didst allow,  
By acceptable kinsed gifts in the Epiphany,  
Deliver, and make us to both ways free.

*Donne, Poems*, p. 343.

From Christmas to Epiphany, the church's design, in all her proper services, is to lead forth in the humanity of our Saviour, and to manifest him in the flesh; but from the Epiphany to Septuagesima Sunday, especially in the four following Sundays, she endeavours to manifest his divinity, by recounting to us in the Gospels some of his first miracles and manifestations of his deity.—*Whately, National Illustration of the Book of Common Prayer*.

**Epiphytal.** *adj.* Epiphytic: (the latter the better word).

Of the epiphytal class only one is found so far north as South Carolina.—*Andr. p. The Vegetable Kingdom, Orchidaceæ*.

**Epiphyte.** *s.* [Gr. *ἐπίφυτον* = plant, thing growing.] In *Botany*, Plant growing on another. (There is some mistiness in the use of this word, as well as in that of *Parasite*. Sometimes the two are strongly contrasted: a *parasite* being a plant which not only grows on another, but absorbs and assimilates its juices so as to be fed or nourished by it; while an *epiphyte* simply grows on it. The distinction is convenient. In the extract, however, it is suggested that an *epiphyte* may find nourishment as well as support, it only being denied that direct nourishment is the special object of the attachment.)

*Epiphytes* do not grow in earth; apparently because the peculiar organization of their roots renders them impatient of having those parts covered; and they prefer the branches of a tree to rocks, not perhaps because of any peculiar food which they find on trees, but because wood is a bad conductor of heat, and because they find shade among branches, while rocks conduct heat more rapidly, and are exposed to more dryness or more wetness. If rocks are soft, shaded, and so placed as to be exposed to no sudden changes of temperature, then *epiphytes* will grow as well on them as on trees.—*Wardley, Theory and Practice of Horticulture*, ii. ii. ch. xv.

**Epiphytic.** *adj.* Having the nature of an epiphyte.

As the leaves [of the Palmyra palm] nearest the ground begin to decay from the larger trees, a portion of their stalks still remain attached to the trunk. Grasping these, convolvuli, ipomoeas, and other climbing plants, ascend in great variety, and clothe the palm with festoons of flowers and verdure. The cavities on the stem become also receptacles for *epiphytic* plants, which germinate and flourish there in infinite profusion.—*Sir J. E. Tennant, Ceylon*, pl. ix. ch. vi.

**Episcopacy.** *s.* Form of church government consisting in the superintendence of one clergyman over others; bishops as a body.

The bishops durst not contest with the assembly in jurisdiction; so that there was little more than the name of episcopacy preserved.—*Lord Clarendon, History of the Grand Rebellion*.

Presley itself cannot be proved by prescription, since episcopacy is not prescribed by any time whatsoever.—*Apliff, Paragon Juris Canonici*.

Hall, bishop of Norwich, had published a Humble Remonstrance in defence of Episcopacy, to which in 1641 five ministers, whose names [Stephen Marshall, Edmund Calamy, Thomas Young, Matthew Newcomen, William Spurrow] made the first letters of the

celebrated word *sinuism*, gave the answer. Of this answer, a constitution was attempted by the learned Cato; and to the constitution Milton published a reply. — *Johnson, Lives of the Poets, Milton*. While Charles was opposing the people, Falkland was a resolute champion of liberty. He attacked Strafford. He even concurred in strong measures against episcopacy. — *Macaulay, Critical and Historical Essays, Falkland's Constitutional History*.

**Episcopal**, *adj.* [see Bishop.] Belonging to, or vested in, a bishop; constituted by the institution of bishops: (generally opposed to Presbyterian).

The plot of discipline sought to erect a popular authority of elders, and to take away episcopal jurisdiction. — *Hooker, Ecclesiastical Polity*. The apostle commands Titus not only to be a pattern of good works himself, but to use his episcopal authority in exhorting every rank and order of men. — *Rogers*.

**Episcopal**, *s.* Adherent to, or partisan of, episcopacy: (Episcopalian commoner).

And the dissenting episcopates, perhaps discontented to such a degree, as, upon some fair unhappy occasion, would be able to shake the throne of loyalty which none can deny theirs to be. — *Swift, Letter on the Sacramental Test*, iv. 32. (Ord MS.)

**Episcopalian**, *adj.* Episcopalian. The discipline was chiefly episcopalian. — *Hughes, Continuation of Howe and Smalley's History of England*.

**Episcopalian**, *s.* Same as Episcopalian, *s.* This offended the episcopalian. — *Buckle, History of Civilization in England*, vol. ii. ch. iii.

**Episcopality**, *s.* Episcopal character. *Rare*. To whom the canons of the apostles give the power of sentence or constitution; Exclusion out of Episcopacy, the throne of episcopality. — *Bishop Hall, Hook's Bore*. (Ord MS.)

**Episcopally**, *adv.* In an episcopal manner; by episcopal authority.

The necessity of the sacrament, and the invalidity of ecclesiastical functions when performed by persons who were not episcopally ordained, were determined by many with great applause. — *Bishop Burnet, History of his own Time*.

**Episcoparian**, *adj.* Episcopalian. *Rare*.

The pretended strictness and severity of the then established church government was not so effectual a remedy against all liberty in opinion and practice, as was the episcoparian government then lately thrown out of doors. — *Wood, Athenæ Oxonienses*, ii. 303. (Ord MS.)

**Episcopate**, *s.* Bishopric; office and dignity of a bishop.

These great qualities at length conducted you so deservedly to the episcopate. — *Arnold, Commentary on the Apocalypse*.

**Episcopacy**, *s.* Survey; search. *Rare*.

If the censor, in his moral episcopacy, beine to judge most in matters not answerable by writ or action, could not use an instrument so gross and badly as jurisdiction, how can the minister of the gospel manage the corpulent and secular trial of bill and process in things merely spiritual? — *Milton, Reason of Church Government*.

**Épisode**, *s.* [Fr.; from Gr. ἐπισόδιον.] Incidental narrative, or digression in a poem, separable from the main subject, yet rising naturally from it.

The poem hath no other episodes than such as naturally arise from the subject. — *Addison, Spectator*. Of episodes in the Paradise Lost, I think there are only two, contained in Raphael's relation of the war in heaven, and Michael's prophetic account of the changes to happen in this world. Both are closely connected with the great action: one was necessary to Adam as a warning, the other as a consolation. — *Johnson, Lives of the Poets, Milton*.

Faithfully adhering to the truth, which he does not suffer so much as an ornamental episode to interrupt, and equally studious to avoid the bold figures of poetry, it is not surprising that Daniel should be little read. — *Hallam, Introduction to the Literature of Europe in the Fifteenth, sixteenth, and seventeenth Centuries*.

**Episodic**, *adj.* Contained in an episode; pertaining to an episode.

I discover the difference between the episodic and principal action, as well as the nature of episodes. — *Notes on the Odyssey*.

**Episodical**, *adj.* Same as Episodic.

Episodical ornaments, such as descriptions and narrations, were delivered to us from the observations of Aristotle. — *Dryden*.

**Epispastic**, *adj.* and *s.* [Gr. ἐπισπαστικός = draw.] In *Medicine*. Acting as, or that which acts as, a blister.

The matter ought to be solicited to the lower parts, by fomentations, bathing, epispastics, and blisters. — *A. Routhnot*.

**Epistle**, *s.* [Gr. ἐπιστολή; Lat. *epistola*; A.S. *epistol*.] Letter.

When loose epistles violate chaste eyes, The half censured, who silently denia, *Dryden*.

**Epistler**, *s.* Obsolete.

1. Writer of letters.

But what needs the man to be so furiously angry with the good old epistler, for saying, that the Apostle's charge (let every one have his own wife) is general to all? — *Bishop Hall, Honour of married Clergy*, p. 372.

The young epistler is yours to the antipodes, or at least to the centre of the earth! — *Richard, Grounds and Oceanisms of the Contempt of the Clergy and Religion enquired into*, p. 37.

2. One who at the communion table, in the service of our church, reads the epistle. *Rare*.

The principal minister using a decent cope, and being assisted with the gospeller and epistler. — *Ecclesiastical Constitutions and Canons*, § 24.

**Epistolary**, *adj.*

1. Relating to letters; suitable to letters.

Scarcely allowing the author one epistolary compliment. — *Massingham, Discourse*, p. 43; 104.

The first of our countrymen, however, who published a set of his own letters, though not in English, was Roger Ascham, who flourished about the time of the Reformation; and, when that mode of writing had been cultivated by the best scholars in various parts of Europe, was celebrated for the terseness of his epistolary style. — *T. Warton, History of English Poetry*, iv. 54.

We must confess that, if the epistolary style of Lord Byron was artificial, it was a rare and admirable instance of that highest art which cannot be distinguished from nature. — *Macaulay, Critical and Historical Essays, Moore's Life of Lord Byron*.

2. Translated by letters.

I shall carry on an epistolary correspondence between the two heads. — *Addison*.

**Epistole**, *s.* Little epistle. *Rare*, and probably coined.

You see then my wicked intention of curtailing this epistle by the above device of large margin. — *Lamb, Letter to Burton*.

**Epistolic**, *adj.* Having the character of an epistle.

Some, when they write to their friends, are all affection; some are wise and sententious; some shew their powers for efforts of gaiety; some write news, and some write secrets; but to make a letter without affection, without wisdom, without gaiety, without a secret, and without a secret, is, doubtless, the great epistolic art. — *Johnson, Letter to Mrs. Thrale*, Oct. 27, 1777. (Ord MS.)

**Epistolical**, *adj.* Same as preceding.

I have an epistolical dissertation on John Malalea (for so he should be called, not Maleia) in Dr. Mill's hands. — *Bentley, Letters*, p. 154.

**Epistolize**, *v. n.* Write letters.

There are none, who in flow of letters, write homilies; perchance when they should epistolize. — *Hooker, Familiar Letters*, i. l. 1.

Whence this proceeds I know not, unless it be from a charming kind of virtue that your letters carry with them to work upon my spirits, which are so full of facets and familiar friendly strains, and so punctual in answering every part of mine, that you may give the law of epistolizing to all mankind. — *Ibid.* iv. 27.

Very, very tired! I began this epistle, having been epistolizing all the morning, and very kindly would I end it, could I find adequate expressions to your kindness. — *Lamb, Letter to Miss Fryer*.

**Epistolizer**, *s.* One who epistolizes.

Some modern authors there are who have exposed their letters to the world, but most of them, I mean among your Latin epistolizers, go freighted with mere Bartholomew ware, with trite and trivial phrases only, larded with pedantic shreds of school-boy verses. — *Hooker, Familiar Letters*, b. i. let. 1. (Ord MS.)

**Epitrophe**, *s.* [Gr.] In *Rhetoric*. Figure which concludes each member of a sentence with the same affirmation: (as, 'Since concord was lost, friendship was lost, fidelity was lost, liberty was lost, all was lost').

**Épitaph**, *s.* [Fr. *épitaphe*; Gr. *ἐπίταφος* = tomb. — see Ep.] Inscription upon a tomb.

Live still, and write mine epitaph.

*Shakspeare, Merchant of Venice*, iv. 1. Some thy lord's dust in Parian stones enshrine, Others immortal epitaph design; With wit and strength, that only yields to thine. — *Smith*.

**Épitaph**, *v. a.* Describe, notice, or commemorate in an epitaph. *Rare*.

In particular he (Gabriel Harvey) plumed himself on having reformed the barbarism of English verse, by having set the example of modelling it after English hexameters. 'If I never deserve any better remembrance,' he exclaims in one of his pamphlets, 'let me be epitaphed the inventor of English hexameters.' — *Craik, History of the English Language* i. 477.

**Épitaph**, *v. n.* Write or speak after the manner of an epitaph. *Rare*.

The commons, in their speeches, epitaph upon him, as on that pope, 'He lived as a wolf, and died as a doggo.' — *Bishop Hall, Heaven upon Earth*, lect. xviii. (Ord MS.)

**Épithéian**, *adj.* Pertaining to an epitaph.

*Rare*.

Like that doughty centurion Afranius in Lucian: who to imitate the noble Pericles in his epitaphs speech, stepping up after the battle to bewail the slain Severinus, falls into a pitiful condolence to think of those costly suppers and drinking banquets, which he must now taste of no more. — *Milnes, Animadversions upon a Discourse of the Humble Remembrance*.

**Épithalamium**, *s.* [Gr. ἐπιθάλμιον, from *θάλαμος* = bed, — in Spenser, who also wrote a *Prothalamion*, the form is that of the original Greek, *Epithalamion*; in which case it is opposed to *Prothalamium*.] Nuptial song in praise of marriage, and of the bride and bridegroom.

I presume to invite you to these sacred nuptials, the *epithalamium* sung by a crowned muse. — *G. Knapton, Paraphrase on the Psalm of David, and the Hymns dispersed throughout the Old and New Testament*.

They embarked with their musical instruments in several barges, and coming under the galleries of the Royal Charles, sang the various carols, sonnets, madrigals, canzoni, and *epithalamiums* that had been composed in honour of her nuptials. — *Strickland, Lives of the Queens of England, Catherine de Aragon*.

**Épithalamy**, *s.* Anglicized form of *Epithalamium*. *Rare*.

He shew'd us how for sins we ought to sigh, And how to sing Christ's *epithalamy*. — *Poem on Donne's Death, Donne's Poems*: 1650.

**Épithelial**, *adj.* Connected with, relating to, or consisting of, Epithelium.

(For example see extract under next entry.)

**Épithélium**, *s.* [?] In *Anatomy*. Cuticle or scarfskin of the mucous surfaces of the body of animals, to which it bears the same relation that the epidermis does to the cutaneous.

The entire alimentary canal consists of three tubes, — an external, fine, membranous, or peritoneal layer; a compact muscular coat composed of a layer of longitudinal and a layer of circular fibres, most developed at the two extremities of the canal; and an internal mucous coat, the *epithelium* of which is thickest at the pharynx and the rectum. Between the muscular and *epithelial* coats, in the intestinal division, there is a white spongy layer of tissue, composed of aggregated cells, compared by Remak to transuded chyle, and which is sometimes the seat of gastric glands. . . . Uric acid has been detected in these [the Malpighian] tubes: they have no proper *epithelial* lining, but are filled with cells, disposed in rows: these cells contain nucleus and numerous fine granules, which impart a yellowish or greenish colour to the tubes. — *Owen, Lectures on Comparative Anatomy*, lect. xvii.

**Épithem**, *s.* [Gr. ἐπίθεμα.] In *Medicine*. Light dressing, applied externally.

*Épithems*, or cordial applications, are justly applied unto the left breast. — *Sir T. Browne, Vulgar Errors*.

Cordials and *epithems* are also necessary, to resist the putrefaction and strengthen the vitals. — *Wise-man, Surgery*.

**Épithet**, *s.* [Gr. ἐπίθετον (from *ἐπι* = on, and *τίθημι* = put, place); Fr. *épithète*.]

1. Adjective denoting any quality good, or bad: (as, 'The verdant grove, the craggy mountain's lofty head'; often equivalent to *Expletive*, which it nearly translates).

It is the just *epithet* of the world, which Julius Scaliger gives unjustly to London. 'torva peregrina.' — *Bishop Hall, Reunions*, p. 203.

I affirm with phlegm, leaving the *epithets* of false, scandalous, and villainous to the author. — *Swift*. *Épithets*, in the rhetorical sense, denote not every adjective, but those only which do not add to the sense, but signify something already implied in the noun itself; as, if one says, 'the glorious sun' on the other hand, to speak of the 'rising' or 'meri-

dian sun' would not be considered as, in this sense, employing an *epithet*. It is a common practice with some writers to endeavour to add force to their expressions by accumulating high-sounding *epithets*, denoting the greatness, beauty, or other admirable qualities of the things spoken of; but the effect is generally the reverse of what is intended.—*Whately, Elements of Rhetoric*, pt. iii. ch. ii. § 4.

A prince [Henry III.] to whom the *epithet* of worthless seems best applicable.—*Hallam, View of the State of Europe during the middle Ages*, ch. viii. pt. 2.

2. Title; name.

The *epithet* of shades belonged more properly to the darkness than the refreshment.—*Dr. H. More, Discourse of Christian Piety*.

3. Phrase; expression.

For which of my good parts did you first suffer love for me?—Suffer love! a good *epithet*: I do suffer love indeed; for I love thee against my will.—*Shakespeare, Much Ado about Nothing*, v. 2.

*Epithet*. *v. a.* Entitle; describe the quality of. *Rare*.

Never was a town better *epithetized*.—*Sir H. Wotton, Reliquie Wottonianæ*, p. 550.

*Epithumetical*. *adj.* [Gr. *ἐπιθυμία* = desire.] Sensual. *Rare*.

By the *epithet*, the heart and parts which God requires and divided from the inferior are *epithumetrical* organs; implying thereby a memento unto purification and cleanness of heart, which is commonly defiled from the concupiscence and affection of those parts.—*Sir T. Browne, Vulgar Errors*, p. 257. (Ord 31x.)

*Epitome*. *s.* [Gr. *ἐπιτομή* (from *τίνω* = I cut, *τόμή* = cutting); Fr. *épitome*.—in English the final *e* is sounded, so that the word is a quadrisyllable.] Abridgement; abbreviation; compendious abstract; compendium.

This is a poor *epitome* of yours, which, by th' interpretation of full time, may shew like all yourself.

*Shakespeare, Coriolanus*, v. 3. *Epitomes* are helpful to the memory, and of good private use; but set forth for public monuments, accuse the industrious writers of delivering much impertinency.—*Sir H. Wotton*.

It would be well if there were a short and plain *epitome* made, containing the most material heads.—*Lucke*.

Such abstracts and *epitomes* may be reviewed in their proper places.—*Watts, Improvement of the Mind*.

The intimate acquaintance with all the varieties of life forced on him by his position in the midst of a moving *epitome* of the world, which vividly reflected them all, failed to lurch him distrust or dissection.—*Talfourd, Memoirs of C. Lamb*.

*Epitomist*. *s.* Same as Epitomizer.

Both this *Epitomist*, and another famous captain Britomartus, whom the *epitomist* borrows and others mention.—*Milton, History of England*.

*Epitomize*. *v. a.* Abstract; contract into a narrow space; diminish by amputation; curtail.

Who did the whole world's soul contract, and drove

Into the glasses of your eyes;  
So made such mirrors and such spies,  
That they did all to you *epitomize*.

*Shakespeare, Poems*, p. 10. If the ladies take a liking to such a diminutive race, we should see mankind *epitomized*, and the whole species in miniature. *Addison*.  
We have *epitomized* many particular words, to the detriment of our tongue. *Id., Spectator*.

*Epitomize*. *v. n.* Make an epitome or abstract.

But, above all, Alfred served in the great army of learning himself as a translator. His translations do not pretend to scrupulous accuracy: sometimes he expands to explain a difficulty, or inserts a fuller account from his own knowledge or from the report of travellers at his court; more often he *epitomizes* as if he were giving the truth of the paragraph that had just been read to him. *C. H. Pearson, The early and middle Ages of England*, ch. ii.

*Epitomizer*. *s.* Abridger; abstracter; writer of epitomes.

When that *epitomizer* of Trojans had to the full described and set out king Priam's riot, as a chief engine and instrument of his overthrow, he adds fiddling and dancing.—*Burton, Anatomy of Melancholy*, p. 400.

Deon Cassius, or his *epitomizer* Xiphilius, will help you out.—*Halca, Golden Remains*, p. 272.

*Epizoon*. *s.* pl. *epizoa*. [Gr. *ζῷον* = animal.] In Zoology. Member of the class Epizoa, a division of the Crustacea consisting of parasites which infest the eyes, gills, and

other parts of fishes; those on the eyes of the sprat and the gills of the salmon being the best known.

The *epizoa* are of distinct sexes: the male appears always to retain his freedom, and is perhaps on that account, singularly smaller than the female. . . . You will not unfrequently find adhering to the eye of the sprat an *epizoon* or larva. . . . The *epizoa* differ from one another in their mode of adhering to the fish they infest: some stick fast by a suckorial mouth; others by processes that grow from the head; but the most common mechanism of adhesion in this singular class is a circular sucker, developed upon the confluent extremities of a pair of obscurely jointed tubular feet. The third thoracic limbs of the larva as in the Lernæopoda of the slark, the Achtheres of the perch, and the Trachilætes of the eel.—*Owen, Lectures on Comparative Anatomy*, lect. xiii.

*Epizootic*. *adj.* Epidemic disease attacking the lower animals.

It has been observed also, that shortly before, or during, or soon after the prevalence of these epidemic catarrhs, *epizootic* diseases have raged; various species of brutes, and of birds, have been extensively affected with sickness; while, on some occasions, prodigious swarms of insects have made their appearance.—*Watson, Lectures on the Principles and Practice of Physic*, lect. xlix.

*Epoch*. *s.* [Gr. *ἐποχή*; from *ἐπί* = stop, rest.] Time at which a new computation is begun; time from which dates are numbered; memorable period.

These are the practices of the world, since the year sixty; the grand epoch of falsehood, as well as delinquency.—*South, Sermons*.

Some lazy ages, lost in sleep and ease,  
No action leave to busy chronicles;  
Such, whose supine felicity but makes  
In story chum, in *epochs* mistakes.  
*Dryden, Astræa Retra.*

Their several *epochs* or beginnings, as from the creation of the world, from the flood, from the first Olympiad, from the building of Rome, or from any remarkable passage or accident, give us a pleasant prospect into the histories of antiquity and of former ages.—*Holzer, Discourse concerning Time*.

Time is always reckoned from some known parts of this sensible world, and from some certain *epochs* marked out to us by the nations observable in it.—*Locke*.

*Epochæ*. *s.* Same as preceding.

Moses distinctly computes by certain intervals, memorable years and *epochæ*, or terms of time.—*Sir T. Browne*.

Time, by necessity compell'd, shall go  
Through scenes of war, and *epochæ* of woe. *Prior*.

*Epode*. *s.* [Gr. *ἐπὶ* = addition or supplement to an ode (*ποίημα*) = song, lyric composition], supplementary ode.—the *-e* is advantageously retained, as the pronunciation is *epod*, not *epodd* as in derivatives from *ὅς* = way.] An Anglicized form of the Greek *epode*, or of the Greek derived through the Latin, in which language the word is adopted. (The only English *epodes* which are other than this, belong to the so called *Pindaric* odes of the seventeenth century. See *Pindaric*.)

1. In the Greek sense. Stanza, following the Strophe and Antistrophe in lyrical poems, and concluding the metrical or musical system.

Strophe, antistrophe, or *epode*, . . . were a kind of stanzas framed only for the music. *Milton, Preface to Samson Agonistes*.

2. In the Latin sense. Poems of Horace so called, or poems of their character: (the most prominent distinction between which and the odes, in the Horatian poems, consists in the metre, which is *iambic* in the *epodes*, but never in the odes).

*Eponym*. *s.* [Lat. *eponymus*; Gr. *ἐπώνυμος*, from *ὄνομα* = name.] As a word coming into current use in works on mythology and primitive history, it means the hypothetical individual who is assumed as the person from whom any race or tribe took its name, e.g. *Hellen* is an *eponymus* of the *Hellenes*. (The Greek and Latin forms *Eponymos* and *Eponymus* (plural *eponymi*) both occur. *Eponymic*, *Eponymous*, and *Eponymy* are congeners.)

If the citizen lived as late a day that the attempt

to trace back his own line to its divine founder became presumptuous and useless, he could still take refuge in the legends which traced the origin of his city, his tribe, or his clan, to some one of the glorious beings who were free from the doom of old age or death. Every country, every autonomous town, nay, even many a hamlet, thus had its *eponymus* hero. . . . The fifty sons of Igeon supplied *eponymus* for as many Arcadian townships.—*Cæsar, De Bello Gallico*, i. 1, and note.

They were somewhat prone to believe in *epigoni* that is, he had no objection to say that Italy was named after Italos, king of the Sicels.—*Thirl.*

*Epopeë*. *s.* [Gr. *ἐπὶ* = discourse, *ποίημα* = make; Fr. *épopée*.] Epic poem.

Travesty borrows from the *epopee*, and that which borrows is of less dignity, because it has not of its own. *Dryden, Preface to Translation of Virgil*.

In France the Trouvères had in the last century begun their inexhaustible, innumerable *epopees*.—*Milman, History of Latin Christianity*, b. ix. ch. ix.

*Epulation*. *s.* [Lat. *epula* = feast.] Banquet; feast.

Contented with bread and water, when he would dine with Jove, and proceeded to *epulation*, he desired no other addition than a piece of cheese.—*Sir T. Browne, Vulgar Errors*.

*Epulotic*. *s.* [Gr. *ἐπὶ* = ulcer, abscess, sore, or wound scoured over.] In *Old Medicine*. Dressing for a sore. *Obsolete*.

The ulcer, incured with common surgicals, and the ulcerations about it were cured by ointment of tuty, and such like *epulotics*.—*Winnian, On Infammation*.

*Epyornis*. *s.* [Gr. *ἐπί* = lofty, *ὄρνις* = bird; a coined word.—The enormous eggs of the bird to which it applies being well known, and no other name of a more English character being likely to become current, it is entered on the principle which admitted Hippopotamus, and which admits Dinornis and others. Its etymology is exceptionable, the *-y-* in *epy-* being neither (*exactly*) the root, nor the connecting vowel. By an etymological fiction it would be convenient to spell it Epiornis; *epi-* in excess, and *epiornis* being the bird of which the ornithological characteristics are in excess. The reasons for this are not purely etymological. Write *epynornis*, and chances are that it will be made a trisyllable, and the second syllable be sounded *-yarn*.] Bird so called.

The largest known egg of a bird is that of the extinct *epynornis* of Madagascar; . . . the contents are computed to equal those of six ostrich's eggs, and a hundred and forty-eight hen's eggs.—*Owen, Zoology of F. & B. Birds*, b. 2, 24.

*Equability*. *s.* Evenness; uniformity of temper.

There is also moderation in toleration of fortune in every sort, which of fully is called *equability*.—*Sir T. Elgot, The Government*, fol. 188.

For the celestial bodies, the *equability* and constancy of their motions argue them ordained by Wisdom. *Ran*.

The *equability* of the temperature of the air rendered the Asiaticks lazy. *Aristarchus, On the Effects of Air on human Bodies*.

Few will hesitate to acknowledge that he has more fancy and tenderness than Walter, but less choice, less judgement and knowledge where to *ability* which *ada*, le. attention to the unity and thread of his little pieces. *Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. v.

*Equable*. *adj.* Equal to itself; even; uniform in respect to form, motion, or temperature.

He would have the vast body of a planet to be as elegant and round as a factitious globe represents it; to be every where smooth and *equable*, and as plain as a clypean field. *Hentley*.

The style of Dryden is sustained with extraordinary ability on an *equable* line, from which he seldom more deviates, neither brilliant nor prosaic; few or no passages could be marked as impressive, but few are languid or mean.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. v.

*Equably*. *adv.* In an equable manner; uniformly; in the same tenor; evenly; equally to itself.

If bodies move *equally* in concentric circles, and the squares of their periodical times be as the cubes of their distances from the common centre, their centripetal forces will be reciprocally as the squares of the distances.—*Cheyne*.

**Equal.** *adj.* [Lat. *equalis*; *equalitas*, *-atis*.]

1. Like another in bulk, excellence, or any other quality that admits comparison; neither greater nor less; neither worse nor better.

If thou be among great men, make not thyself equal with them.—*Ecclesiasticus*, xxxii. 9.

May join us; equal joy, as equal love.  
*Milton, Paradise Lost*, ix. 881.

Although there were no man to take notice of it, every triangle would contain three angles equal to two right angles.—*Sir J. Hale, Origination of Mankind*.

2. Adequate to any purpose.

The Scots trusted not their own numbers, as equal to fight with the English. *Lord Clarendon, History of the Grand Rebellion*.

3. Even; uniform; level; parallel; proportionate.

He laughs at all the vulgar cares and fears,  
At their vain triumphs, and their vain tears;  
An equal temper in his mind he found,  
When fortune flatter'd him, and when she frown'd.  
*Dryden*.

It is not permitted me to make my commendations equal to your merit. *Id., Fables*, dedication.

4. Indifferent; impartial; neutral; just; equitable. *Latinism*: (*aequus* = just; *iniquus* (*in* + *aequus*) = unjust. The extract from Jonson is even more of a translation (*pauca quos aequus amavit Jupiter*) than the professed one from Dryden.)

Whom equal Jove hath lov'd.  
*B. Jonson, Cynthia's Revels*.

Is not my way equal? are not your ways unequal?  
—*Ezekiel*, xlviii. 25.

Each to his proper fortune stand or fall;  
Equal and unconcern'd I look on all:  
Rutlians, Trojans, are the same to me,  
And both shall draw the lots their fates decree.  
*Dryden, Virgil's Aeneid*.

5. Being upon the same terms.

They make the married, orphans, widows, you and the aged also, equal in spoils with themselves. —*2 Maccabees*, viii. 30.

**Equal.** *s.*

He is censured on Heros: I pray you, dissuade him from her: she is no equal for his birth. *Shakespeare, Much Ado about Nothing*, ii. 1.  
He would make them all equals to the citizens of Rome.—*2 Maccabees*, ix. 15.

2. One of the same age.

I profited in the Jews' religion above many my equals in mine own nation.—*Galatians*, i. 14.

3. Equality; level (by which it has, probably, been superseded).

Thou that presum'st to weigh the world anew,  
And all things to an equal to restore,  
Instead of right, my seems, great wrong dost show,  
And fur above thy frow's pitch to war.  
*Spenser, Faerie Queen*, iv. 2. 34.

**Equal.** *v. a.*

1. Make one thing or person equal to another.

What shall I equal to thee, that I may comfort thee, O virgin daughter of Zion?—*Lamentations*, ii. 13.

2. Rise to the same state with another person.

And will she yet abuse her eyes on me, . . .  
O me whose all not equals Edward's nobility.  
*Shakespeare, Richard III.* i. 2.

I know nobody so like to equal him, even at the age he wrote most of them, as yourself.—*Tranbull, Letter to Pope*.

3. Recompense fully; answer in full proportion.

She sought Siclus through the shady grove,  
Who answer'd all her cares, and equal'd all her love.  
*Dryden, Virgil's Aeneid*.

Nor you, great queen, these offices repeat,  
Which he will equal, and perhaps augment. *Ibid.*

**Equality.** *s.*

1. Evenness; uniformity; constant tenour; equibality.

Measure out the lives of men, and periodically define the alterations of their temper; conceive a regularity in mutations, with an equality in constitutions, and forget that variety which physicians theoria discover.—*Sir T. Browne, Vulgar Er-*

2. Likeness with regard to any quantities compared.

*Equality* of two domestic powers,  
Breeds scrupulous faction.

*Shakespeare, Antony and Cleopatra*, i. 3.  
According to this equality wherein God hath placed all mankind, with relation to himself, in all the relations between man and man there is a mutual dependence.—*Swift*.

**Equalization.** *s.* Bringing to, state of, equality.

Our scheme of equalization requires, that accordingly as any individual on the scale, our depressing powers should counteract and balance his ascending powers. *Chamberlain, Observer*, no. 48. (Ord MS.)

I have never conceived, or can conceive, that the strength of making the major part of the inhabitants of your country believe, that their case, and their satisfaction, and their equalization with the rest of their fellow-subjects of Ireland, are things adverse to the principles of that connexion.—*Barke, Letter on the Affairs of Ireland*.

**Equalize.** *v. a.*

1. Make even.

To equalize accounts, we will allow three hundred years, and so long a time as we can manifest from the Scripture.—*Sir T. Browne*.

2. Run parallel with; rival.

A prince, who had he not been hindered with domestic disorders, would have equalized Caesar himself.—*Feller, History of the Holy War*, p. 204.

That would make the moved body, reminding what it is, in regard of its bigness, to equalize and fit a thing heavier than it is.—*Sir K. Digby, Treatise on the Nature of Bodies*.

3. Make equal; reduce to a condition of equality.

The Virgin they do at least equalize to Christ.—*Dr. H. More, Antidote against Idolatry*, ch. v.

No system of instruction will completely equalize natural powers; and yet it may be of service towards their improvement. A youthful Achilles may acquire skill in hurling the javelin under the instruction of a Chiron, though the master may not be able to compete with the pupil in vigour of arm.—*Whately, Elements of Logic*, pref.

Office of itself does much to equalize politicians. It by no means brings all characters to a level; but it does bring high characters down and low characters up towards a common standard. In power the most patriotic and most enlightened statesman finds that he must disappoint the expectations of his admirers. . . . On the other hand, power turns the very vices of the most worst his adventurer, his selfish ambition, his sordid cupidity, his vanity, his cowardice, into a sort of public spirit.—*Macaulay, History of England*, ch. xxiv.

**Equally.** *adv.* In an equal manner.

1. In the same degree with another person or thing; alike.

The covetous are equally impatient of their condition, equally tempted with the wages of unrighteousness, as if they were indeed poor.—*Beyers*.

2. Evenly; equably; uniformly.

If the motion of the sun were as unequal as of a ship, sometimes slow, and at others swift; or, if being constantly equally swift, it yet was not circular, and produced not the same appearances, it would not help us to measure time more than the motion of a comet does.—*Locke*.

3. Impartially.

We shall use them,  
As we shall find their merits and our safety  
May equally determine.  
*Shakespeare, King Lear*, v. 3.

4. In just proportion.

What I give, let equally be rendered  
For my soul's health.  
*Beaumont and Fletcher, Spanish Curate*.

**Equalness.** *s.* Attribute suggested by Equal: (Equality commoner).

Let me lament . . . that our stars  
Unreconcilable should have divided  
Our equalness to this.  
*Shakespeare, Antony and Cleopatra*, v. 1.

**Equanimity.** *s.* [Lat. *aequanimitas*.] Evenness of mind, neither elated nor depressed.

That is a kind of dogged stupidity, rather than Christian equanimity, as one well saith.—*Gataker, True Contentment*, 164. (Ord MS.)

This watch over a man's self, and the command of his temper, I take to be the greatest of human perfections. . . . I do not know how to express this habit of mind, except you will let me call it equanimity. It is a virtue which is necessary at every hour, in every place, and in all conversations.—*Tuller*.

**Equanimous.** *adj.* Even; not dejected; not elated. *Rare*.

Out of an equanimous civility to his many worthy friends.—*Bishop Gauden, Life of Bishop Brownrigg*, p. 219: 1000.

**Equation.** *s.*

1. In *Arithmetic*. Equivalence of two quantities differently expressed, as  $9-4=5$ .

2. In *Algebra*. Same as the preceding, except that some element is expressed generally and symbolically, the solution of the problem thus involved being founded on the properties of numbers.

Thus,  $9-4=5$ , is an equation expressing the equality of 9-4 and 5; and  $a+b=c+d$  is an equation denoting that the difference between the sum of  $a+b$  and  $c$  is equal to  $d$ ; the quantities between which the sign = is placed being called the two sides of the equation.—*Rees, Cyclopaedia*, in voce.

3. Average.

By an argument taken from the equations of the times of the eclipses of Jupiter's satellites, it seems that light is propagated in time, spending in its passage from the sun to us about seven minutes of time.—*Sir J. Newton, Opticks*.

**Equator.** *s.* [Lat.] In *Geography*. See last extract. A proper, rather than a common, name; hence, generally preceded by the definite article.

By reason of the convexity of the earth, the eye of man, under the equator, cannot discover both the poles; neither would the eye, under the pole, discover the sun in the equator.—*Sir T. Browne, Vulgar Errours*.

On the other side the equator, there is much land still remaining undiscovered.—*Key, Wisdom of God manifested in the Works of the Creation*.

The equator on the earth, or equinoctial in the heavens, is a great circle, whose poles are the poles of the world. It divides the globe into two equal parts, the northern and southern hemispheres. It passes through the east and west points of the horizon; and at the meridian is raised as much above the horizon as is the complement of the latitude of the place. Whenever the sun comes to this circle, it makes equal days and nights all round the globe, because he then rises due east, and sets due west, which he doth at no other time.—*Harris*.

**Equatorial.** *adj.* Pertaining to the equator; taken at the equator.

The planets have spheroidal figures, and obliquities of their equatorial to their elliptical planes.—*Cheyne*.

**Equatorial.** *s.* Astronomical instrument so constructed as to retain a celestial object within the field of view, while above the horizon.

The idea of applying clockwork to equatorials is much earlier than the time of Ptolemy. Hooke, in his 'Animadversions on the First Part of the Machine Celestis of Hevelius (1674), proposes to mount his quadrant on a polar axis; and he describes 'the watchwork which is to make it move round in the same time with the diurnal revolution of the earth.' Ptolemy was born only in 102.—*Smith and Grant, Translation of Arago's Popular Astronomy*, b. xiii. ch. viii. note.

**Equerry.** *s.* [Fr. *escurie*; L. Lat. *scurin*, or *scura* = stable for a horse (*equus*).] Officer who has the care of horses.

Quick and active as an equerry, smooth and eloquent as a master of the ceremonies.—*Tuller*, no. 10.

The phrase unstable *equilibrium* is one used in mechanics to express a balance of forces of such kind, that the interference of any further force, however minute, will destroy the arrangement previously subsisting; and bring about a totally different arrangement. Thus, a stick poised on its lower end is in unstable *equilibrium*; however exactly it may be placed in a perpendicular position, as soon as it is left to itself it begins, at first imperceptibly, to lean on one side, and with increasing rapidity falls into another attitude. Conversely, a stick suspended from its upper end is in stable *equilibrium*; however much disturbed, it will return to the same position. — *Herbert Spencer, First Principles*, ch. xiii. § 100.

Plural in -*a*.

In every diversely moving aggregate, there results a comparatively early dissipation of motions which are smaller and much resisted; followed by long-continued of the larger and less resisted motions; and so there arise dependent and independent moving *equilibria*. Hence also may be inferred the tendency to conservation of such moving *equilibria*; since, whenever the new motion given to the parts of a moving *equilibrium* by a disturbing force, is not of such kind and amount that it cannot be dissipated before the pre-existing motions (in which case) it brings the moving *equilibrium* to an end; it must be of such kind and amount that it can be dissipated before the pre-existing motions (in which case the moving *equilibrium* is re-established). — *Ibid.*

In like manner, when astronomy took the form of a speculative science, words were invented to denote distinctly the connection thus introduced. The sun's annual path among the stars, in which not only solar, but also all lunar eclipses occur, was termed the ecliptic. The circle which the sun describes in his diurnal motion, when the days and nights are equal, the Greeks called the equinoctial (*ἡμερινή*), the Latin astronomers the *equinoctial*, and the corresponding circle on the earth was the equator. 'Tis he doth twice a year, about the 21st of March and 23rd of September, which therefore are called the vernal and autumnal *equinoxes*. — *Harris*.

'Twas now the month in which the world began,

The next question was, whether it is more reasonable and more *equitable* that the minority should be bound by the act of the majority, or the contrary? The answer to this question is obvious. It is plainly most consistent with reason, that the sentiments of the majority should prevail and conclude the whole; because it is not so likely that a greater number of men should be mistaken, when they concur in their judgment, as that a smaller number should be mistaken. And this is likewise most consistent with equity; because, in general, the greater number have a proportionally greater interest that the purposes of the society should succeed well, and have more at stake if those purposes should miscarry or be disappointed. — *Rothsford, Institutes of Natural Law*, li. i. § 1.

Mr. Hallam appears to have begun with the reign of Henry the Seventh, as the period at which what is called modern history, in contradistinction to the history of the middle ages, is generally supposed to commence. He has stopped at the accession of George the Third, 'from unwillingness,' as he says, 'to excite the prejudices of modern politics, especially those connected with personal character.' These last appear to be the pure oxide of yttrium; whilst the first precipitates are composed chiefly of the oxide of *erbian* with oxide of *terbian* and yttrium, and, in the intermediate ones, oxide of *terbian* predominates.—*Turner, Elements of Chemistry*, p. 402.

**Eremit**, *s.* [N.Fr. *ermite*; Lat. *eremita*;

from Gr. *eremita* = a wilderness. — *Hermit* is the same word, thoroughly Anglicized; i.e. reduced to a dissyllable, having the *i* short, and having an *k* prefixed. With such a parallel, it is scarcely worth while to refine upon the presence or absence of the final *e*.] *Hermit*: (of which it is the *older form*; at present the translation of the Greek *eremita*).

Antonius the *eremite* findeth a fifth commodity not inferior to any of those four.—*Sir W. Raleigh, History of the World*.

Instead of total seclusion from the habits and pursuits of men, the *eremites* sweep the streets of the great cities in armed bodies, displaying an irregular valour which sometimes puts to shame the languid patriotism of the imperial soldiery. **Erethism.** *s.* [*Gr. ἐρεθισμός*, from *ἐρεθίζω* = irritate.] In *Medicine*. See *erect*.

*Erethism*, in pathology, has been generally understood, since the time of Hippocrates, as implying a state of irritation or excitement of a part, different from, or short of, the inflammatory condition, although often passing into it. . . . Many modern pathologists employ it as synonymous with *erosion*, or simply an excited state of the vital actions of a part; and others attribute to it more of a morbid import, viewing it as an early stage, and lesser grade, of many acute diseases, especially those that are febrile or inflammatory. The most familiar illustration of this state, peculiar to the former class, is the act of blushing. According to the latter class, the ravenous appetite attendant sometimes upon debility and various affections of the digestive organs, proceeds from *erethism* of these parts, or, in other words, from an excited state of the nerves of the organ, with increased circulation and secretion or exhalation from the villous surface. — *Copland, Dictionary of Practical Medicine*.

**Ergotism.** *s.* See *extract*.

*Ergotism* [is] a cachectic state of body, variously complicated, caused by diseased or unripe grain. Diseased, unripe, or damaged grain of any kind is injurious to the animal economy, according to the quantity consumed. . . . Rye is most frequently productive of injurious effects in the northern countries of Europe, the disease in it giving rise to the *ergot*, or spur, being the chief cause. But wheat, rice, or any other grain, either similarly diseased, or prematurely cut down, or damaged by the mode of keeping, . . . will occasion dangerous diseases. . . . But the disorders produced by other kinds of diseased or unwholesome grain are, in many respects, similar to those consequent upon the use of spurred rye. — *Copland, Dictionary of Practical Medicine*.

**Erythema, s.** [Gr.] In *Medicine*. Morbid redness of the skin, terminating in scales and occasionally in gangrene; rash. (*Erythematous* is a derivative.)

The varieties of erythema and of erysipelas have been confounded together by many writers, a circumstance almost unavoidable, when it is considered that several states of the one are merely modifications of certain forms of the other; distinctions between them being rather conventional and artificial, than essential, distinct, and unvarying. *Copland, Dictionary of Practical Medicine*, in voce.

**Escalade, s.** [Fr.] Act of scaling the walls of a fortification.

4. Excuse; subterfuge; evasion.

St. Paul himself did not despise to remember what-ever he found agreeable to the word of God among the heathen, that he might take from them all *escapes* by way of ignorance.—*Sir W. Raleigh*.

Thirdly, *escheat* is used for a writ, which lies where the tenant, having estate of fee-simple in any lands or tenements holden of a superior lord, dies seized, without heir general or special. *Cowell*.If the king's ordinary courts of justice do not protect the people, if he have no certain revenue or *escheats*, I cannot say that such a country is conquered.—*Sir J. Davies, Discourse on the State of Ireland*.**Escheat. v. n.** Fall to the lord of the manor by forfeiture, or for want of heirs.In the last general wars there, I knew many good freeholders executed by martial law, whose lands were thereby saved to their heirs, which should have otherwise *escheated* to her majesty.—*Spenser, View of the State of Ireland*.As the bishops cannot devise by will, all they dispossessed of *escheats* to the king.—*Swinburn, Travels through Spain*, p. 323.**Escheat. v. a.** Forfeit.Infidelity cannot forfeit their inheritance to others; no more than civility professed by Jews to Christian religion can *escheat* their goods to the crown under which they live.—*Bishop Hall, Cases of Conscience*.**Escheatable. adj.** Liable to escheat, or be escheated.The custom of Kent is that gavelkind land is not forfeitable nor *escheatable* for felony; for they have an old saying, 'The father to the bough, and the son to the plough.'—*Bacon, Use of the Law*, iv. 12. Hayward*.**Escuage. s.** [Fr. *escu* = shield.] See extract.*Escuage*, that is, service of the shield, is either uncertain or certain. *Escuage* uncertain is likewise two-fold: first, where the tenant by his tenure is bound to follow his lord, going in person to the king's wars so many days. The days of such service seem to have been rated by the quantity of the land so holden; as, if it extend to a whole knight's fee, then the tenant was bound thus to follow his lord forty days. A knight's fee was so much land as, in those days, was accounted a sufficient living for a knight; and that was six hundred and eighty acres, as some think, or eight hundred as others; or 150, per annum. *Sir Thomas Smith* saith, that census equestris is 40*l.* revenue in free lands. If the land extend but to half a knight's fee, then the tenant is bound to follow his lord but twenty days. The other kind of this *escuage* uncertain is called Castleward, where the tenant is bound to defend a castle. *Escuage* certain is where the tenant is set at a certain sum of money, to be paid in lieu of such uncertain services. *Cowell*.*Escuage*, which was the commutation for the personal service of military tenants in war, having rather the appearance of an indulgence than an imposition, might reasonably be levied by the king. It was not till the charter of John that *escuage* became a parliamentary assessment; the custom of commutation service having grown general, and the rate of commutation being variable. None but military tenants could be liable for *escuage*. *Hallam, View of the State of Europe during the middle Ages*, ch. viii. pt. 2.**Esculent. adj.** [Lat. *esculentus*.] Good for food; eatable.I knew a man that would fast five days; but the same man used to have continually a great weight of herbs that he smelled on, and some *esculent* herbs of strong scent, as garlic. *Bacon*.Since the truths we are to attend to are scientific truths, governed by precise and homogeneous relations, we must not found our scientific classification on casual, indefinite, and unconnected considerations. We must not, for instance, be satisfied with dividing plants, as Dioscorides does, into aromatic, *esculent*, medicinal and vinous; or even with the long prevalent distribution into trees, shrubs, and herbs; since in these subdivisions there is no consistent principle.—*Whewell, History of Scientific Ideas*, ii. 115.**Esculent. s.** That which is esculent.This cutting off the leaves in plants, where the root is the *esculent*, as radish and parsnips, it will make the root the greater, and so it will do to the heads of onions; and where the fruit is the *esculent*, by strengthening the root, it will make the fruit also the greater.—*Bacon, Natural and Experimental History*.**Escutcheon. s.** [N.Fr. *escusson*; Lat. *scutum* = shield.] Shield of a family; picture of the ensigns armorial; hatchment affixed to a mansion.There be now, for martial encouragement, some degrees and orders of chivalry, and some remembrance perhaps upon the *escutcheons*.—*Bacon, Essays*.*Escutcheon* is a French word, from the Latin *scutum*, leather; and hence cometh our English word buckler, lethe in the old Saxon signifying leather, and buck or back a buck or stag; of whose skins, quilted close together with horn or hard wood, the ancient Britons made their shields.—*Peacham*.**Spelt escocheon.**The addition of the *escocheon* of Edward the Confessor to his own, although used by the family of Norfolk for many years, and justified by the authority of the heralds, was a sufficient foundation for an impeachment of high treason.—*T. Warton, History of English Poetry*, iii. 2.**Escutcheoned. adj.** Having an escutcheon or hatchment.For what, my friend! is this *escutcheoned* world, Which hangs out Death in one eternal night? *Young, Night Thoughts*, ii. 2.**Esloin. v. a.** [N.Fr. *esloigner*; Lat. *longus* = long, far.] Remove to a distance; banish; withdraw.

cause of God, is ours by descent, and we are doubly  
bound to *espouse* it. — *Bishop Atterbury*.

**Esposée.** *part. adj.* Married; wedded.

With flowers, garlands, and sweet-smelling herbs,  
*Esposée* Eve deck'd first her nuptial bed.

*Milton, Paradise Lost*, iv. 709.

**Esposuer.** *s.* One who maintains or defends  
a point.

As woovers and *espousers*, having commission or  
letters of credence to treat of a marriage. — *Bishop*  
*Glanville, His espousal*, p. 156: 1633.

The *espousers* of that unauthorised and detestable  
scheme have been weak enough to assert, that there  
is a knowledge in the elect, peculiar to those chosen  
vessels. — *Allen, Sermon before the University of Ox-*  
*ford*, 19th July, 1761, p. 11.

**Espy.** *v. a.* [Fr. *espier*.]

1. See things at a distance.

Few there are of so weak capacity but publick  
evils they easily *espy*; fewer so patient as not to  
complain, when the previous inconveniences thereof  
work so visible smart. — *Hooker, Ecclesiastical Polity*.

2. Discover a thing intended to be hid.

He who before he was *espied* was afraid, after being  
perceived was ashamed, now being hardly rubb'd  
upon, left both fear and shame, and was moved to  
anger. — *Sir P. Sidney*.

3. See unexpectedly.

As one of them opened his sack, he *espied* his  
money. — *Genesis*, xlii. 27.

4. Discover as a spy.

Moses sent me to *espion* the land, and I brought  
him word again. — *Joshua*, xiv. 7.

**Espy.** *v. n.* Watch; look about.

Stand by the way and *espy*; ask him that fleeth  
what is done? — *Jeremiah*, xlii. 19.

**Espy.** *s.* Spy.

The same day there was an *espion* taken, whom  
they which took him thought to have been a  
Turke, howbeit he was found to be one of their  
own men. — *Kudles, History of the Turks*, 1180.  
(Ord MS.)

The master-master general having given my lord-  
lieutenant one thousand patois for his consent  
to enjoy that office, after he had got his majesty's  
orders for a patent, thought a check upon his office  
would be a troublesome *espion* upon him. — *Swift*,  
*Character of the Earl of Wharton*. (Ord MS.)

**Esquire.** *s.* [N.Fr. *escuyer*, from *escu*, a  
shield.]

1. Armour-bearer or attendant on a knight.

The hero in this distress was generally in armour,  
and in a readiness to fight any man he met with. . . .  
A lover of this kind had always about him a person  
of second value, and subordinate to him. . . . This  
trusty companion was styled his *esquire*. — *Tuller*,  
no. 10.

2. Title of honour immediately below that of  
knight. See extracts.

What are our English dead? —

Sir Richard Kettle, Davy than *esquire*.

*Shakspeare, Henry V.* iv. 8.

Those to whom this title is now of right due, are  
all the younger sons of noblemen, and their heirs  
male for ever; the four *esquires* of the king's body;  
the eldest sons of all baronets; so also of all knights  
of the Bath, and knights bachelor, and their heirs  
male in the right line: those that serve the king in  
any warlike calling, as the sergeant chamberlain,  
sergeant of the crown, master cook, &c., such as are  
created *esquires* by the king with a collar of S. S. of  
silver, as the heralds and serjeants at arms. The  
chief of some ancient families are likewise *esquires*  
by prescription: those that bear any superlative office  
in the commonwealth, as high sheriff of any county,  
who retains the title of *esquire* during his life, in  
respect of the great trust he has had of the posse  
comitatus. He who is a judge of the peace has it  
during the time he is in commission, and no longer.  
Utter barristers, in the acts of parliament for pul-  
l-money, were ranked among *esquires*. — *Blount*.

The appellation of *esquire* is the most notoriously  
abused of any class amongst men. . . . I will under-  
take, that if you read the subscriptions to all the  
offices in the Kingdom, you will not find three letters  
directed to any but *esquires*. I have myself a couple  
of clerks, and the rogues make nothing of leaving  
messages upon each other's desk: one directs to  
Dewey Goosequill, *esquire*; to which the other re-  
plies by a note to Nehemiah Dushwell, *esquire*, with  
respect! In a word, it is now 'populus universus',  
a people of *esquires*. — *Tuller*, no. 10.

The houses of the gentry were not more plenti-  
fully supplied. Few knights of the shire had librar-  
ies so good as may now perpetually be found in a  
servant's hall, or in the back parlour of a small shop-  
keeper. An *esquire* passed among his neighbours  
for a great scholar, if Hudibras and Baker's Chroni-

ele, Tarlton's Jests and the Seven Champions of Christendom, lay in his hall window among the fishing rods and fowling pieces.—*Marysley, History of England*, ch. iii.

**Esquire.** *v. a.* Attend as an esquire: (a colloquial expression, in the last century, denoting a gentleman attending a lady in public; and of much the same value as the ridiculous *chaperon* of the present day).

**Esquireship.** *s.* Rank, state, condition, or title, of esquire.

They make the dignity of *esquireship* successorie. — *Time's Storehouse*, (Orl MS.)

While I this unexampled task essay,  
Pass awful gulfs, and bent my painful way,  
Celestial dove, divine assistance bring.

No arts essay'd, but not to be admir'd. *Pope.*

2. Make experiment of; (especially) try the value and purity of metals; assay.

The standard in our mind being now settled, the rules and methods of *assaying* suited to it should remain unvariable. — *Locke.*

Yours to preserve a friend, and mine to praise. *Smith.*

Yet modestly he does his work survey,  
And calls his finish'd poem an *essay*. *Poem to Lord Roscommon.*

3. Trial; experiment.

This treatise prides itself in no higher a title than that of an *essay*, or imperfect attempt at a subject. — *Glauville.*

He wrote this but as an *essay*, or taste of my virtue.

Repetitions wear us into a liking of what, possibly, in the first *essay*, displeased us. — *Locke.*

**Essayist.** *s.* Writer of essays.

I make, says a gentleman *essayist* of our author's age, as great difference between Tacitus and Seneca's style and his [Cicero's], as musicians between Trenchmore and Lachrymæ. — *R. Johnson, Manquea.*

Such are all the *essayists*, even their master Montaigne. — *Id., Discoversia.*

In 1722 he [Johnson] was almost entirely occupied with his Dictionary. The last paper of his Rambler was published March 2, this year; after which, there was a cessation for some time of his talents as an *essayist*. — *Buttall, Life of Johnson.*

**Essence.** *s.* [See Existence.]

1. Distinctive nature of a being or substance.

See last extract.

One thinks the soul is air; another, fire;  
Another, blood diffus'd about the heart;  
Another saith, the elements conspire,  
And to her *essence* each doth give a part. *Sir J. Davies.*

I could wish the nature of a spirit were more unknown to me than it is, that I might believe its existence, without meddling at all with its *essence*. — *Dr. H. More, Divine Dialogues.*

He wrote the nature of things upon their names; he could view *essences* in themselves, and read forms without the comment of their respective properties. — *South, Sermons.*

*Essence* is but the very nature of any being, whether it be actually existing or no: a rose in winter has an *essence*; in summer it has existence also. — *Wallis, Logic.*

In the Aristotelian phraseology, Genus and Differentia are of the *essence* of the subject; by which, as we have seen, is really meant that the properties signified by the genus and those signified by the differentia form part of the connotation of the name denoting the species. Proprium and Accidents, on the other hand, form no part of the *essence*, but are predicated of the species only accidentally. Such are accidents, in the wider sense in which the accidents of a thing are opposed to its *essence*;

though, in the doctrine of the predicable, Accidents is used for one sort of accident only, proprium being another sort. Proprium, continue the schoolmen, is predicated accidentally, indeed, but necessarily; or, as they further explain it, signifies an attribute which is not indeed part of the *essence*, but which flows from, or is a consequence of, the *essence*, and is, therefore, inseparably attached to the species; e.g. the various properties of a triangle, which, though no part of its definition, must necessarily be possessed by whatever comes under that definition. — *J. N. Mill, System of Logic*, b. ii. ch. vii. § 7.

2. Formal existence; that which makes anything to be what it is.

The visible church of Jesus is one in outward profession of those things, which supernaturally appertain to the very *essence* of Christianity, and are necessarily required in every particular Christian man. — *Hooker, Ecclesiastical Polity.*

3. Existence; quality of being.

In such cogitations have I stood, with such a darkness and heaviness of mind, that I might have been persuaded to have resigned my very *essence*. *Sir P. Sidney.*

I would resign my *essence*, that he were  
As happy as my love could fashion him.  
*Beaumont and Fletcher, Spanish Curate.*

4. Being; existent person.

As far as gods, and heavenly *essences*  
Can perish. *Milton, Paradise Lost*, l. 134.

5. Species of existent being.

Here be four of you, as differing as the four elements; and yet you are friends: as for Empedocles, because he is temperate, and without passion, he may be the fifth *essence*. — *Harmon.*

6. Constituent substance.

For spirits, when they please,  
Can either sex assume, or both; so soft  
And unaccompanied in their *essence* pure;  
Nor tied or manacled with joint or limb.  
*Milton, Paradise Lost*, l. 423.

7. Cause of existence.

She is my *essence*; and I leave to be,  
If I be not by her influence  
Foster'd, illumin'd, cherish'd, kept alive.  
*Shakespeare, Two Gentlemen of Verona*, iii. 1.

8. In *Medicine*. Chief properties or virtues of any simple or composition collected in a narrow compass.

9. Perfume; odour; scent.

Our humble province is to tend the fair;  
To save the powder from too rude a sale,  
Nor let th' imprison'd *essence* exhale.  
*Pope, Rape of the Lock.*

There of the faded fop and *essenc'd* beau,  
Frolicous, with a Stole's frown disclose  
Thy manly scorn, averse to thine pomp.  
*Shenstone, Economy.*

**Essential.** *adj.* [Lat. *essentialis*.]

1. Necessary to the constitution or existence of anything.

The discipline of our church, although it be not an *essential* part of our religion, should not be rashly altered, as the very substance of our religion will be interested in it. — *Bacon.*

This power cannot be innate and *essential* to matter; and if it be not *essential*, it is consequently most manifest it could never supervene to it, unless impressed and infused into it by an immaterial and divine power. — *Bentley.*

And if each system in gradation roll,  
Alike *essential* to th' numbering whole,  
The least confusion but in one, not all  
That system only, but the whole must fall. *Pope.*

**Essentiality.** *s.* Essential nature or character; first or constituent principles.

The soul supplies the body in the *essentiality* of it and indispensable obedience. — *Jeremy Taylor, Ductor Dubitantium*, l. (Orl MS.)

I have sometimes wondered how a people, whose genius seems wholly turned to singing and dancing, and prating to vanity and impertinence; who lay so much weight upon modes and postures, whose *essentialities* are generally so very superficial; who are usually so serious upon trifles, and so trifling upon what is serious, have been capable of committing such solid villainies; more suitable to the gravity of a Spaniard, or the silence and thoughtfulness of an Italian. — *Swift, Kriemler*, no. 33.

**Essentially.** *adv.* In an essential manner; by the constitution of nature; really; according to the true state of things.

Body and spirit are *essentially* distinct, though not locally distant. — *Glauville.*

**Essentiate.** *v. a.* Invest with essential characters.

If Mr. Descartes's notion be admitted, 'twill be irrational to admit a vacuum, since any space, that is pretended to be empty, must be acknowledged to have the three dimensions, and consequently all that is necessary to *essentiate* a body. — *Boyle, Press Shewing into the vulgar and received Notion of Nature*, p. 201. (Orl MS.)

**Essoin.** *v. a.* [N.Fr. *essoiner*.] In Law. Excuse; release.

**Essoin.** *s.* In Law. Excuse upon just cause of absence for him who is summoned, or sought for, to appear and answer to an action real, or to perform suit to a court-baron.

From every work he challenged *essoin*,  
For contemplation sake; yet otherwise  
His life he led in lawless riotous. *Spenser, Faerie Queen.*

She seems to have given a bad impression of her claims by putting in frequent *essoins*. — *C. H. Pearson, The early and middle Ages of England*, ch. xxxiii.

**Used adjectively.**

Formerly the first general return day of the term was called the *essoin* day, because the court sat to receive *essoins*; but when *essoins* were no longer allowed to be made, i.e. obtained, in personal actions, the court discontinued such sittings. — *Wharton, Law Lexicon*, in voce.

## 4. Household, retinue, or system of expenditure kept up for a certain purpose: (in the following extract it is considered by Johnson to mean the allowance, income, or salary, for the maintenance thereof).

His excellency, who had the sole disposal of the emperor's revenue, might gradually lessen your establishment.—*Swift.*

## 5. Settled, fixed, or final rest.

Whilst we set up our hopes and establishments here, we do not seriously consider that God has provided another and better place for us.—*Archbishop Wake.*

An estafete was despatched on the part of our ministers at the Hague, requiring Marshal Bender to suspend his march.—*Sir B. Boothby, Letter to the Right Honourable Edmund Burke, p. 84.*

Estato. *s.* [N.Fr. *estat*; modern form, *état*.]

## 1. General interest; business of the government; public.

Many times the things adduced to judgement may be more of tum, when the reason and consequence thereof may reach to point of estate: I call matters of estate not only the parts of sovereignty, but whatsoever introduced any great alteration, or dangerous precedent, or concerneth manifestly any great portion of people.—*Bacon, Essays.*

## 2. Condition of life, with regard to prosperity or adversity; condition; circumstances in general.

(Go, misers!) go: for lucres sell thy soul;  
Thy wars for wars, and gudge from pole to pole,  
That men may say, when thou art dead and gone,  
See what a vast estate he left his son!

*Dryden, Persius's Satires.*

The most plausible distinction alleged by Spelman, that the heriot is by law due from the per-

sonal estate, but the relief from the heir, seems hardly applicable to that remote age, when the law of succession as to real and personal estate was not different.—*Hallam, View of the State of Europe during the middle Ages, ch. viii. pt. 1.*

I am indeed surprised at Brady's position, that the English had suffered an indiscriminate deprivation of their lands. Undoubtedly there were a few left, in almost every county, who still enjoyed the estates which they held under Edward the Confessor, free from any superiority but that of the crown, and were denominated, as in former times, the king's thanes. Cospatrie, son perhaps of one of that name who had possessed the earldom of Northumberland, held forty-one manors in Yorkshire, though many of them are stated in Doomsday to be waste. Inferior freeholders were probably much less disturbed in their estates than the higher class.—*Ibid. ch. viii. pt. 2.*

And I will estate your daughter, in what I  
Have promised.

*Beaumont and Fletcher, Two Noble Kinsmen.*  
Some of them thought that Christ descended to that place of habitation, where the souls of all the faithful from the death of the righteous Abel to the death of Christ were detained, and there, dissolving all the power by which they were detained below, translated them into a far more glorious place, and estate than in a condition far more happy in the heavens above.—*Bishop Pearson, Exposition of the Creed, art. v.*

## 2. Settle as a fortune.

Why hath thy queen  
Summon'd me hither?

Out of only fifteen thousand families of lords and estate gentlemen, I suppose now in thirty to be tolerably educated.—*Swift, Of the Education of Ladies, xiv. 230. (Orit MS.)*

Many would little esteem of their own lives, yet  
for remorse of their wives and children, would be  
withheld from that heinous crime.—*Spenser.*

Esteem. *s.*

## 1. High value; reverential regard.

Who can see,  
Without esteem for virtuous poverty,  
Severe Fabricius, or can censure V'admirer  
The ploughman counsel in his coarse attire?

I am not uneasy that many, whom I never had  
any esteem for, are likely to enjoy this world after

This might instruct the proudest esteemer of his own parts, how useful it is to talk and consult with others.—*Locke.*

**Æsthetics.** *s.* [Gr. *αισθητικος*, relating to *αισθησις* = perception. — see Chromatics.] This comparatively new word is German in respect to its derivation, i.e. if it had not been invented in Germany it would, probably, have had no existence in England. It began by meaning the doctrine of Perception in psychology generally. It was then limited to the doctrine of Taste, or the perception of beauty in art. For a further refinement see Callisthenics.

In the matter of form it is, however, by no means German, but Greek. The *e* in German, where the fiction of taking words of Greek origin through a Latin medium is not recognized, is *k*. The *u* or *ur* German only partially coincides with the Greek *u* and Latin *e*. The German form, though spelt *ästhetik* or *æsthetik*, is sounded as though written *ästetik*; the adjectival derivative being *ästhetisch*, with a *e* of a wholly different origin. Neither is there in German any form ending in *s*. See also *Æ*.] Theory of the criticism of beauty in art; doctrine of taste.

These general premises . . . form (or rather might form) a body of doctrine, which is properly the art of life, in its three departments, morality, prudence or policy, and æsthetics; the right, the expedient, the beautiful or noble, in human conduct and works. To this art (which, in the main, is unfortunately still to be credited) all other arts are subordinate; since its principles are those which must determine whether the special aim of any particular art is worthy and desirable, and what is its place in the scale of desirable things. Every art is thus a joint result of laws of nature disclosed by science, and of the general principles of what has been called teleology, or the doctrine of ends; which, borrowing the language of the German metaphysicians, may also be termed, not improperly, the principles of practical reason.—*J. S. Mill, System of Logic, pt. iv. b. ii. § 4.*

What does the astonished reader make of this little sentence from Schiller's æsthetic letters? . . . The *Æsthetic Letters*! Briefe über die *ästhetische* Erziehung des Menschen! (in which this and many far deeper matters come into view, will one day deserve a long chapter to themselves. . . . We have already undertaken to present our readers, on a future occasion, with some abstract of the *æsthetic* letters, one of the deepest, most compact pieces of reasoning we are anywhere acquainted with: by that opportunity the general character of Schiller, as a philosopher, will best fall to be discussed.—*Cutcliffe, Critical and Miscellaneous Essays, Schiller.*

Whence may it proceed that you have a man educated and in all points equipped, without ever coming upon certain wants which only philosophy can meet? I am convinced it is entirely attributable to the *æsthetic* direction you have taken through the whole rearing. Within the *æsthetic* temper there arises no want of those grounds of comfort which are drawn from speculation; such a temper has self-subsistence, has infinitude within itself; only when the sensual and the moral in man strive hostilely together need help be sought of pure reason. A healthy poetic nature wants, as you yourself say, no moral law, no rights of man, no political metaphysics.—*Schiller, Extract from Correspondence, translated in the essay just quoted.*

Estimable. *adj.* Capable of being esteemed or estimated (in the good sense of the word); valuable; worthy of esteem, honour, or respect.

The only way to come to a true *estimate* upon the odds betwixt a publick and a private life, is to try both.—*Sir R. L. Estlin*.

Outward actions can never give a just *estimate* of us, since there are many perfections of a man which are not capable of appearing in actions.—*Addison, Spectator*.

Upon a moderate *estimate* and calculation of the quantity of water now actually contained in the abyss, I found that this alone was full enough to cover the whole globe to the height assigned by Moses.—*Woodward*.

2. Approximately valued.

Wandesforde, Instruction to his Son*, § 83: about 1640.

The manner in which the flower-buds open, technically called their *estivation*, is a feature of some importance in distinguishing tribes of plants. The petals are sometimes so folded that their margins just meet—the *estivation* is then valvate; in some flowers they overlap each other like tiles—it is then imbricate; in other instances they are doubled inwards at the edges, or imbricate; while in many they are twisted or contorted. *Succerby, British Wild Flowers*, introd.

One would be apt to suspect, the prevailing contempt of God's word, and *estrangement* from his will, to a degree that was never known in any Christian country, must take its rise from the irreligion and bad example of those who are styled the better sort.—*Bishop Berkeley, Discourse addressed to Magistrates*.

**Estray. v. a.** [N.Fr. *estraier*.] Stray; wander.

This nymph one day, surcharg'd with love and grief,

**Ether.** *s.* [Gr. *αιθρ*; Lat. *aether*.]

1. Element more fine and subtle than air; hypothetical atmosphere.

The parts of other bodies are held together by the eternal pressure of the *ether*, and can have no other conceivable cause of their cohesion and union.—*Locke.*

The intramathematical school could explain to their own satisfaction how motions, once begun, were transferred and modified; but in many cases of the living frame there seemed to be a power of beginning motion, which is beyond all mere mechanical action. This led to the assumption of a principle of a higher kind, though still material. Such a principle was asserted by Frederick Hoffmann. . . . According to him, the reason of the greater activity of organized bodies lies in the influence of a material substance of extreme subtilty, volatility, and energy. This is, he holds, no other than the *ether*, which, diffused through all nature, produces in plants the bud, the secretion and motion of the juices, and is separated from the blood and lodged in the brain of animals. From this, acting through the nerves, must be derived all the actions of the organs in the animal frame; for when the influence of the nerve upon the muscle ceases, muscular motion ceases also.—*Whewell, History of Scientific Ideas*, ii. 120.

The prevailing hypothesis of a luminiferous *ether*, in other respects not without analogy to that of Descartes, is not in its own nature entirely cut off from the possibility of direct evidence in its favour. It well known that the difference between the calculated and the observed times of the periodical return of Kuck's comet, has led to a conjecture that a medium capable of opposing resistance to motion is diffused through space. If this surmise should be confirmed, in the course of ages, by the gradual accumulation of a similar variance in the case of the other bodies of the solar system, the luminiferous *ether* would have made a considerable advance towards the character of a vera causa, since the existence would have been ascertained of a great consubstantial agent, possessing some of the attributes which the hypothesis assumes; though there would still remain many difficulties, and the identification of the *ether* with the resisting medium would even, I imagine, give rise to new ones. At present, however, this supposition cannot be looked upon as more than a conjecture; the existence of the *ether* still rests on the possibility of deducing from its assumed laws a considerable number of the phenomena of light.—*J. S. Mill, System of Logic*, xiv. iii. § 4.

2. Matter of the highest regions above.

These fields of light and liquid *ether* flow,  
Purg'd from the ponderous drags of earth below.  
*Dryden.*

3. In *Chemistry*. Light and highly volatile fluid resulting from the distillation of alcohol with sulphuric acid.

The term *ether* originally applied to . . . the volatile liquid produced by the action of sulphuric acid upon common alcohol, is now extended to a large class of compounds formed by the action of acids on alcohols.—*Cree, Dictionary of Chemistry*, in voce.

**Ethereal.** *adj.*

1. Formed of ether.

Man feels me, when I press th' *ethereal* plains.

Sent from whose sov'reign goodness I adore.

Thrones and imperial powers, offspring of heav'n,  
*Ethereal* virtues! *Ibid.* ii. 310.

Such as these, being in good part freed from the entanglements of sense and body, are employed, like the spirits above, in contemplating the Divine Wisdom in the works of nature: a kind of anticipation of the *ethereal* happiness and employment.—*Glanville.*

Natures *ethereal*, human; angel, man. *Pope.*

**Ethereous.** *adj.* Etherend.

Of this *ethereous* mould, whereto we stand,  
*Milton, Paradise Lost*, vi. 472.

**Ethio.** *adj.* Moral; delivering precepts of morality: (whence Pope entitled part of his works '*Ethick* Epistles').

**Ethical.** *adj.* Moral; treating on morality.

It is no narrow and negatively encomium to say he [Pope] is the great poet of reason, the first of *ethical* authors in verse.—*T. Warton, Essay on Pope.*

In an *ethical* work, for instance, one may be treating of virtue, while discussing all or any of these questions: 'Whence virtue consists?' 'Whence our notions of it arise?' 'Whence it derives its obligations?' &c.; but if these questions were confusedly blended together, or if all of them were treated of, within a short compass, the most judicious remarks and forcible arguments would lose their interest and their utility, in so perplexed a composition.—*Whately, Elements of Rhetoric*, pt. i. ch. i. § 2.

The first original work of any reputation in *ethical* philosophy since the revival of letters, and which, being apparently designed in great measure for the chair of the professorship, serves as a sort of link between the class of mere casuistry and the philosophical systems of morals, which were to follow, is by Dominic Laëz, a Spanish Dominican . . . who played an eminent part in the deliberations of the Council of Trent. *Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries*, pt. ii. ch. iv. sect. 1. § 2.

**Ethically.** *adv.* In an ethical manner; according to the doctrines of morality.

My subject leads me not to discourse *ethically*, but Christianly of the faults of the tongue.—*Dr. H. More, Government of the Tongue.*

Law travels over much of the same ground as ethics, and guides its course nearly according to their dictates. If this be the case, then it is clear that . . . the lawgiver has the same need to be *ethically* instructed as the individual man. . . . The lawgiver then, that is, the legislative mind of the nation, must be *ethically* instructed; which implies that it must be enlightened by religion, upon the basis of which alone it is, that moral science can be effectually reared.—*Gibson, The State in its Relations with the Church*, ch. ii. § 60.

**Ethics.** *s.* Doctrine of morality; system of morality.

I will never set politics against *ethics*; for true *ethics* are but as a handmaid to divinity and religion.—*Bacon.*

If the atheists would live up to the *ethics* of Epicurus himself, they would make few or no proselytes from the Christian religion.—*Bathurst.*

The fourth book of Bacon's *Novum Organum* relates to the constitution, bodily and mental, of mankind. . . . Logic and *ethics* are the grand divisions, correlative to the reason and the will of man. . . . It is here to be remarked that the sciences of logic and *ethics*, according to the partition of Lord Bacon, are far more extensive than we are accustomed to consider them. Whatever concerned the human intellect came under the first; whatever related to the will and the affections of the mind fell under the head of *ethics*.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries*, pt. ii. ch. ii. § 34.

The science of *ethics*, in the third quarter of the seventeenth century, seemed to be cultivated by three very divergent schools: by that of the theologians, who went no farther than revelations, or at least than the positive law of God, for moral distinctions; by that of the Platonic philosophers, who sought them in eternal and intrinsic relations; and that of Hobbes and Spinoza, who reduced them all to selfish prudence. A fourth theory, which, in some of its modifications, has greatly prevailed in the last two centuries, may be referred to Richard Cumberland, afterwards Bishop of Peterborough.—*Ibid.* pt. iv. ch. iv. § 13.

**Ethiops.** *s.* Native of Ethiopia, and, as such, supposed to be black. A *proper*, rather than a *common*, name, except in combination. See next entry.

**Ethiops.** *s.* Old chemical name for several black powders, e.g. *ethiops animalis*, vegetable, antimonioides, per se, &c. (In all or most of these, the second element of the combination is Latin as well as the first: when Anglicized it follows the substantive, e.g. *ethiops mineral*, or sulphuret of mercury.)

**Ethimoid.** *adj.* [Gr. *ημω* = sieve or sifter, *-μοις* = -like.] In *Anatomy*. Name of one of the bones of the head: (called also *cribriform*, the Latin equivalent of ethimoid).

One horizontal plate receives the olfactory nerves, which perforate that plate with such a number of small holes that it resembles a sieve, whence the bone is named cribiform or ethmoid bone.—*Harper, Medical Dictionary*, in voce.

**Ethnic.** *adj.* Heathen; pagan; not Jewish; not Christian.

Such continually as the *ethnic* world durst not offer him, is the peculiar insolence of degenerated Christians.—*Dr. H. More, Government of the Tongue*.

I shall begin with the agreement of profane, whether Jewish or *ethnic*, with the Sacred Writings.—*Giles*.

**Ethnic.** *adj.* [Gr. ἔθνικός.] Heathen; pagan.

Last I might seem to have no measure in raking up this *ethnic* dunghill, I will now leave the theology of the original of demons.—*Mede, Apology of the latter Times*, p. 10: 1641.

**Ethnicism.** *s.* Heathenism; paganism.

A hallowed temple, free from taint  
Of *ethnicism*, makes his muse a saint.

*R. Johnson, Epigram.*

**Ethnics.** *s.* Heathens; not Jews; not Christians.

The first Jupiter of the *ethnics* was then the same Cam, the son of Adam.—*Sir W. Raleigh, History of the World*.

First, it is to be observed, that although the Jews and *Ethnics* derived both the Apostles and the rest of the Christians, for preaching and believing in him who was crucified upon the cross; yet all, both Apostles and Christians, were so far from being discouraged from their profession by the ignominy of the cross, as they rather rejoiced and triumphed in it. *Reverendissima Constitutione et Canone*.

**Ethnographer.** *s.* Investigator in Ethnology.

**Ethnographic.** *adj.* Relating to Ethnology.

**Ethnographical.** *adj.* Same as Ethnographic.

**Ethnological.** *adj.* Pertaining to ethnology.

Between the extremes brought out by the above comparison lie subjects for *ethnological* notice of cranial diversity, seemingly inextinguishable.—*Queen, Anatomy of Vertebrates*, li 564.

**Ethnologist.** *s.* Investigator in ethnology.

To define and classify all the races of man as we find them distributed over the face of the earth, after the manner in which we classify the lower animals in the wild state, is probably an achievement which the *ethnologist* will never accomplish. *Crawford, On the Constitution of Races*, in *Transactions of the Ethnological Society*. (See also under Etymology.)

**Ethnology.** *s.* [Gr. λόγος = word, principle.]

The study denoted by the term being comparatively new, it is the opinion of the editor that the exact import of it has yet to be definitely fixed. Nor is he certain that it will be determined on etymological principles; the chances being that the usage of the most important writers on the subject, rather than its theoretical merits, will fix it. In the translation of Heeren's *Recherches* upon certain Nations of Antiquity *ἔθνος* exactly coincides with the word *nation* its application being political. Thus, he says that history may be written either *ethnologically*, as the history of Greece, Rome, or England, or *synchronistically*, as the history of the tenth or twelfth century. This is true; but the current meaning of the word translates *ἔθνος* by *race* rather than *nation*; while *race* itself, when compared with *variety* and *species*, is a very indefinite term.

Ethnology, at present, means, in the first instance at least, the study, or science, of the varieties of man, or his natural (physical) history, with special reference to the manner in which one division of mankind differs from another. The present writer has contrasted it with Anthropology, or the investigation of the characteristics of man in general, as opposed to those of the lower animals; admitting that, as a general name for the two departments

thus coordinated, Anthropology would be, subject to two objections, a good term; perhaps the best. The objections are: (1) the want which would be thus created for some name for the section or division thus left unnamed, and (2) the little necessity, in a new study, for a term which would be vague rather than general. As it is, Ethnology has been extended beyond its original import. Hence, supposing it to become unduly general, it would be etymologically objectionable. But this is the case with Geometry as applied to anything beyond the simple measurement of the earth. Probably it would have been best for Ethnography to have kept its ground, and for Ethnology and Ethnography to have stood in the same, or nearly the same, relation to one another as Geography and Geology. Prichard used Ethnography in his earlier writings. In the earlier writings, too, of Crawford, Ethnology never occurs, while Ethnography is rare. The form in -logy was French, and took currency in England after the formation of the Ethnological Society, which, after the practice of societies in general, took the most comprehensive term it could find—a bad precedent. Even now, many of those who use Ethnology prefer to write Ethnography, rather than Ethnological, philology; a matter which has often to be written about. In respect to their congeners, Ethnography (like Geography) gives Ethnographer; Ethnology (like Geology), Ethnologist.

To find that anthropology fifty and even three hundred and fifty years ago meant anatomy, while it now means the natural history of the human race, is of no more value than to know that the poetical English word Harbinger is derived from the very unpoetical word for a Dutch tavern-keeper; that Harbinger, designating a vine of the vine, is a corruption of Aliburnum, that Jerusalem artichoke from its word-branches, that we appeal to common sense of the three words and our consideration would be good. It had no choice, and whether they are compounds of the Greek words which signify man or people, and a writing or a discourse, seems in common sense a matter of perfect indifference. A well-chosen term, however carefully selected, will never contain the definition of a

Substantially, geography and geology have etymologically equivalent elements, as I press two distinct sciences. & it is with astronomy and astrology, the one expressing a grand science and the other a great delusion. Chemistry and the search for the Philosophic stone have the same etymology. Of the three words, *ethnography*, *ethnology*, and *anthropology*, the most eligible is the one in most familiar use, and the shortest. They are all too long; and in this sense the last, which exceeds the two first, is the most inconvenient by a whole syllable, or to use a commercial phrase, by twenty per cent. For ourselves, we should have preferred *ethnography* to *ethnology*. It was first employed nearly forty years ago by the late eminent Italian geographer Balbi; whereas, the first use of the word *ethnology* was by the French as late as 1839, when they formed the Ethnological Society of Paris. A few years later, following the French, we established the Ethnological Society of London. In the troubles of the last French Revolution, the Ethnological Society of Paris, without becoming extinct, became moribund, and then a new Society was formed, which gave the first example of an Anthropological Society. This was the example which was imitated two years and a half ago in London.—*Ethnological Journal*, October, 1865, *Ethnography, Ethnology, and Anthropology*.

The fourth theme of anthropology is that of *ethnography* or *ethnology*, the object of which is an investigation into the affinities of various peoples and tribes. Closely allied with it is the history of mankind; and it seems arbitrary whether this branch of knowledge be considered as a separate part of anthropology, or belonging to ethnology. Translation by J. P. Collingsworth of Introduction to Anthropology, by T. Watts: 1863.

**Ethnological.** *adj.* Connected with, constituted by, constituting, or relating to, ethnology.

A science of ethnology founded on the laws of psychology, is therefore possible; though little has yet been done, and that little not at all systematically, towards forming it. The progress of this

important but most imperfect science will depend on a double process: first, that of deducing theoretically the *ethnological* consequences of particular circumstances of position, and comparing them with the recognised results of common experience; and secondly, the reverse operation; increased study of the various types of human nature that are to be found in the world.—*J. S. Mill, System of Logic*, vi. 5, § 8.

**Ethiology.** *s.* See extracts.

The laws of the formation of character are . . . derivative laws, resulting from the general laws of mind; and are to be obtained by deducing them from those general laws; by supposing any given set of circumstances, and then considering what, according to the laws of mind, will be the influence of those circumstances on the formation of character. . . . A science is thus formed, in which I would propose to give the name of *ethology*, or the science of character; from *ἦθος*, a word more nearly corresponding to the term 'character' as I here use it, than any other word in the same language. The name is perhaps etymologically applicable to the entire science of our mental and moral nature; but if, as is usual and convenient, we employ the name psychology for the science of the elementary laws of mind, *ethology* will serve for the ulterior science which determines the kind of character produced. In conformity to those general laws, by any set of circumstances, physical and moral. According to this definition, *ethology* is the science which corresponds to the art of education; in the widest sense of the term, including the formation of national or collective character as well as individual. . . . The science of *ethology* may be called the exact science of human nature; for its truths are not, like the empirical laws which depend on them, approximate generalizations, but real laws. . . . While on the one hand psychology is altogether, or principally, a science of observation and experiment, *ethology*, as I have conceived it, is, as I have already remarked, altogether deductive. The one ascertains the simple laws of mind in general, the other traces their operation in complex combinations of circumstances. *Ethology* stands to psychology in a relation very similar to that in which the various branches of natural philosophy stand to mechanics. The principles of *ethology* are properly the middle principles, the 'axiomata media' (as Bacon would have said) of the science of mind; as distinguished, on the one hand from the empirical laws resulting from simple observation, and on the other from the highest generalizations. — *J. S. Mill, System of Logic*, vi. 5, §§ 5, 6.

I would not here undertake to decide what other hypothetical or abstract sciences similar to political economy, may admit of being carved out of the general body of the social sciences. . . . social phenomena are in a sufficiently close and complete dependence, in the first resort, on a peculiar class of causes, to make it convenient to create a preliminary science of those causes; postponing the consideration of the causes which act through them, or in concurrence with them, to a later period of the inquiry. There is however among these separate departments one which cannot be passed over in silence. . . . I allude to what may be termed Political *Ethology*, or the theory of the causes which determine the type of character belonging to a people or to an age.—*Ibid.* vi. 9, § 3.

**Etiolation.** *s.* [?] See extract.

Plants are sometimes affected by a disease which entirely destroys their verdure and renders them pale. This is called *etiolation*, and may arise solely from the want of the agency of light, by which the oxidation of oxygen is effected and the leaf rendered green. And hence it is that plants placed in dark rooms, or between great masses of stone, or in the clefts of rocks, or under the shade of other trees, look always peculiarly pale. But if they are removed from such situations and exposed to the action of light, they will again recover their green colour. *Etiolation* may also ensue from the depredations of insects dwelling in the radicle and consuming the food of the plant, and thus debilitating the vessels of the leaf so as to render them insusceptible of the action of light.—*London, Encyclopedia of Gardening*, § 822.

**Etiological.** *adj.* Connected with dependent on, or consisting in, Etiology. Its bearing upon the language of science, especially with reference to the prefix *pol-*, may be seen in the extract; also under Paleontology.

I have already stated . . . that the class of sciences which I designate as *palætiological* are those in which the object is to ascend from the present state of things to a more ancient condition, from which the present is derived by intelligible causes. An conspicuous examples of this class we may take geology, glaciology, or comparative philology, and comparative archaeology. These provinces of knowledge might perhaps be intelligibly described as histories; the history of the earth, the history of languages, the history of art. But these phrases would not fully describe the sciences we have in view. These sciences are to treat of causes as well as of effects. Such researches might be termed philosophical history; or,

In order to mark more distinctly that the cause of events are the leading object of attention, *etiological* history. But since it will be more convenient to describe this class of sciences by a single appellation, I have taken the liberty of proposing to call them the *paleontological* sciences. While *paleontology* describes the beings which have lived in former ages without investigating their causes, and *etiology* treats of causes without distinguishing historical from mechanical causation; *paleontology* is a combination of the two sciences; exploring, by means of the second, the phenomena presented by the first. The portions of knowledge which I include in this term are *paleontological etiological* sciences. All these sciences are connected by this bond—that they all endeavour to ascend to a past state, by considering what is the present state of things, and what are the causes of change. . . . Another science, cultivated with great skill and success in modern times, compares the languages of different countries and nations, and, by an examination of their materials and structure, endeavours to determine their descent from one another: this science has been termed comparative philology, or *ethnography*; and by the French linguist, a word which we might imitate in order to have a single name for the science, but the Greek derivative glossology appears to be more convenient in its form. The progress of the arts (architecture and the like); how one stage of the culture produced another; and how far we can trace their nature and most complete condition to their earliest form in various nations;—are problems of great interest belonging to another subject, which we may for the present term comparative archaeology. A philologist, in a very interesting work (Mr. Donaldson, in his *New Crælius*), expresses his dislike of this word, and suggests that I must mean *pale-etiological*. I think the word is more likely to obtain currency in the more compact and euphonious form in which I have used it. It has been adopted by Mr. Donaldson, in his *Manual of Comparative Philology*, and more recently by other writers.—*Whewell, History of Scientific Ideas*, b. x. ch. i. and note.

**Etiology. s.** [Gr. *αιτιολογια*; from *αιτια*—cause, and *λογος*—word, principle.] Doctrine of efficient, as opposed to final, causes. See also *Teleology*.

The fourth way of amplification is by frequent *etiologicals*, or giving reasons for what we say:—*Instructions for Oratory*, p. 80: 1672.

I have not particulars enough to enable me to enter into the *etiology* of this distemper.—*Arbuthnot, On the Effects of Air on human Bodies*.

Those modes by which one term in the natural series of events is derived from another, the forms of historical causation,—the kinds of connexion between the links of the infinite chain of time, are very various; nor need we attempt to enumerate them. But these kinds of causation being distinguished from each other, and separately studied, each becomes the subject of a separate *etiology*. Thus the causes of climate in the earth's surface, residing in the elements, fire and water, form the main subject of geological *etiology*. The *etiology* of the vegetable and animal kingdoms investigates the causes by which the forms and distribution of species of plants and animals are effected. The study of causes in glossology leads to an *etiology* of language, which shall distinguish, analyse, and estimate the causes by which certain changes are produced in the languages of nations; in like manner we may expect to have an *etiology* of art, which shall scrutinise the influences by which the various forms of art have each given birth to its successor. —*Whewell, History of Scientific Ideas*, b. x. ch. i.

**Etiquette. s.** [Fr.; Gr. *ἠθικα*—matters connected with morals.] System of rules, generally of an artificial character, for propriety of behaviour in society; rigid adherence to such; ceremony.

Without hesitation kiss the slipper, or whatever else the *etiquette* of that court requires.—*Lord Chesterfield*.

The Infanta Maria Josepha has reason to envy every country which she sees resigning at liberty; for confinement, *etiquette*, and celibacy, are likely to be her lot during life.—*Steuart, Travels through Spain*, p. 328.

**Etymologist. s.** Etymologist.

Laws there must be; and 'lex à Romulo' with the *etymologist*; it is called a law from building.—*Dr Griffith, Fear of God and the King*, p. 82: 1688.

**Etymological. adj.** Relating to etymology relating to the derivation of words.

Excuse this conceit, this *etymological* observation.—*Locke*.

It is sufficient in *etymological* inquiries, if the senses of kindred words be found such as may easily pass into each other, or such as may both be referred to one general idea.—*Johnson*.

**Etymologist. s.** One who investigates the derivation of words.

It may be, curious *etymologists* (let them lose their wages who work in difficult trifles) seek to reap

what was never sown, whilst they study to make those words speak reason, which are only voices and placidum imposed at pleasure.—*Fuller, History of the Holy War*, p. 108.

I close this section with an apology for Chaucer, Gower, and Cheshole; who are supposed by the *etymologists* to have corrupted the purity of the English language.—*T. Warton, History of English Poetry*, ii. 30.

**Etymologie. v. a.** Give the etymology of a word.

Breches, quod brech-rieches; when a gallant bears all his riches in his breches.—*Most fortunately etymologized!*—*B. Jonson, Cynthia's Revels*.

**Etymology. s.** [Lat. *etymologia*; from Gr. *ἔτυμος*—true, real, and *λόγος*—word, discourse.]

1. Descent or derivation of a word from its original; deduction of formations from the radical word; analysis of compound words into primitives.

Consumption is generally taken for any universal diminution and coagulation of the body, which accretion its *etymology* implies.—*Harey, Discourses of Consumption*.

When words are restrained by common usage, to a particular sense, to run up to *etymology*, and construe them by dictionary, is wretchedly ridiculous.—*Collier, Short View of the Immorality and Profaneness of the English Stage*.

Polix is used by comick writers for a looking-glass, by which means the *etymology* of the word is visible, and polixela will signify a lady who looks in her glass.—*Addison, Spectator*.

If the meaning of a word could be learned by its derivation or *etymology*, yet the original derivation of words is oftentimes very dark.—*Watts, Logic*.

2. Part of grammar which delivers the inflections of nouns and verbs: (as opposed to Orthography and Syntax).

**Etymon. s.** Origin; primitive word.

Blue hath its *etymon* from the High Dutch blue; from whence they call himmel-blue, that which we call sky-colour or heaven's blue.—*Peasam, On Drawing*.

The etymologist, therefore, whoever he were, hath deceived himself in assigning the *etymon* of this word Assyria, while he foreth this distinction between it and Syria.—*Gregory, Quæstiones*, p. 179: 1650.

**Eti-.** [Gr. *ἔτι*—well.] Prefix in composition, suggesting the notion of goodness, its opposite being *dys-*, as may be seen by the compounds beginning with that syllable.

**Eucharist. s.** [Gr. *εὐχαριστία*—grace.] Act of giving thanks; sacramental act in which the death of our Redeemer is commemorated with a thankful remembrance; sacrament of the Lord's supper.

Himself did better like of common bread to be used in the *eucharist*.—*Hooker, Ecclesiastical Polity*.

Some receive the sacrament as a means to procure great graces and blessings, others as an *eucharist* and an offer of thanksgiving for what they have received.—*Jeremy Taylor*.

From the litany let us pass to the fourth service, that of the holy communion. This service is most assuredly of a highly joyful character, and peculiarly adapted to music, for it is called by a name which no other part of the prayer-book bears.—the *Eucharist*, which is 'giving thanks.' The parts of the communion service which are commanded by the rubrics to be sung (of course where there is a choir, so that they can be fitly sung) are these:—First, the Nicene Creed, then the hymn, *Te Sanctus*, which begins, 'Holy, holy, holy, Lord God of hosts,' immediately before the consecration of the elements; and lastly, the hymn, *Gloria in Excelsis*, or *Gloria be to God on high*, which occupies the close of the service.—*Beaumont, Principles of the Book of Common Prayer, considered in a Series of Lecture Sermons*, sermon xiii.

**Eucharistic. adj.** Relating to the sacrament of the supper of the Lord; connected with thanksgiving.

The *eucharistic* bread being neither hypostatically united with the Divinity, nor being the medium through which any such supernatural tendency of the Divine Presence appears to us, information directed toward it cannot fail of being palpable idolatry.—*Dr. H. More, Antislavery Inquiry*, ch. ii.

The Reformation awakened new controversies, or gave increased importance to old ones, concerning the *eucharistic* sacrament, the communion of the laity in both kinds, and the alleged substantial change and real presence in the consecrated elements; also as to the nature and operation of grace and good works, and the theory of original sin, re-

generation, justification, and predestination.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. iv.

**Eucharistical. adj.** Same as Eucharistic. The act of this *eucharistical* supper.—*Bishop Hall, Breviary*, p. 204.

The latter part was *eucharistical*, which began at the breaking and blessing of the bread.—*Sir T. Browne, Vulgar Errors*.

It would not be amiss to put it into the *eucharistical* part of our daily devotions: we praise thee, O God, for our limbs and senses.—*Roy, Wisdom of God manifested in the Works of the Creation*.

It is not, therefore, to be expected that a hundred years before his time our church music should have spirited movement enough to convey sentiments of gratitude and thanksgiving, though it might serve to accompany in slow and solemn tones the strains of penitence and supplication; and therefore Dr. Aldrich did judiciously in putting the music, which was originally set to a *eucharistical* hymn of thanksgiving to a penitential one, to which, it is evident, the suppliant strain was much better adapted.—*Mason, Essays on English Church Music*.

**Euchologe. s.** [Gr. *εὐλογε*—word, principle.] Eulogy. *Rare*.

That it was so, will be easily evident from this recollection out of their own *euchologues*.—*Gregory*. (Ord MS.)

**Euchology. s.** Formulary of prayers; liturgy.

He did not frame an entirely new prayer, in words of his own conception, but took out of the ancient *euchologies*, or prayer-books of the Jews, what was good and laudable in them.—*Bishop Bull, Works*, ii. 550.

**Eucrasia. s.** [Gr. *εὐκρασία*; *εὐκρίν*—temperature.] Well-proportioned mixture of qualities, on the strength of which a body is said to be in a good state of health.

The eucrasia or good temperature of the body.—*Bishop Beza, On the Passions*, ch. xxiv.

**Euchetical. adj.** [Gr. *εὐχητικός*—having a tendency, or relating, to *εὐχή*—prayer.] Containing acts of thanksgiving; eucharistic.

The *euchetical* or eucharistical offering must consist of three degrees, or parts: the offering of the heart, of the mouth, of the hand.—*Mede, Discourses upon Offerings*, b. i. disc. 40.

**Eudiometer. s.** • [Fr. *eudiomètre*; from Gr. *εὐδωρ*—clear sky, and *μετρον*—measure.]

See extract.

*Eudiometer* is the name of any apparatus subservient to the chemical examination of the air. It means a measure of purity, but is employed merely to determine the proportion of oxygen.—*Enc. Dictionary of Arts, Manufactures, and Mines*, in voca.

**Euhemerism. s.** [Gr. *Εὐήμερος*, Lat. *Euhemerus*, an early speculator upon the origin of the polytheistic mythology of Greece, whose doctrine was that it arose exclusively, or in the main, out of the deification of dead heroes.] A proper, rather than a common, name, in respect to its origin, but used, especially in recent works on mythology, in a general sense. In the following extract spelt without the *h*. (*Euhemerize*, *Euhemerist*, and *Euhemeristic* are congeners.)

In this legend, as I have related it, Daphné is not changed bodily into a plant; and more than one reviewer has fastened on this version a charge of needlessly thrusting in a purely modern sentiment. My own writer it is spoken of as a piece of *euhemerism*; by another it is denounced as degrading the myth from a genuine to an artificial state.—*Cox, Tales of the Gods and Heroes*, p. 290.

**Eulogically. adv.** In a manner which conveys a eulogy; (Eulogistically commoner; and better, as showing the relation to eulogize rather than to the immediate congener of Logic).

Give me leave *eulogically* to enumerate a few of those many attributes, which have deservedly been given that glorious plant.—*Sir T. Herbert, Relation of some Travels into Africa and the Great Asia*, p. 267.

**Eulogist. s.** One who eulogizes or praises; panegyrist; encomiast.

Such bigotry was sure to find its *eulogist*. . . . The *eulogistic* language addressed to those holy bigots raises our indignation.—*Buckle, History of Civilization in England*, vol. ii. ch. vii.

**Eulogistic.** *adj.* Having the character of a eulogy.

(For example see extract under preceding entry.)

**Eulogium.** *s.* [Lat. from Gr. εὐλόγιον.] Older form of Eulogy.

Notwithstanding the extravagant eulogium which you have heard of the French king's house, I will venture to affirm, that the king of England is better, I mean more comfortably lodged.—*Amulet, Travels through France and Italy.* (Ord MS.)

I shall not accompany those writings with eulogiums, but leave them to speak for themselves.—*Steele, Spectator*, no. 461. (Ord MS.)

**Eulogize.** *v. a.* Commend; praise.

Those Who eulogize their country's foes.  
*Hudibras, Satirical Poem.*  
**Eulogy.** *s.* [Gr. λόγος = word, speech.] Encomium; praise; panegyric.

Many brave young minds have oftentimes, through hearing the praises and famous eulogies of worthy men, been stirred up to affect the like commendations.—*Spenser, View of the State of Ireland.*

If some men's appetites had more melody in discord, than in the harmony of the angelic quire; yet even these would miss to be affected with eulogies given themselves.—*Dr. H. More, Decay of Christian Piety.*

**Eunuch.** *s.* [Gr. εὐνοχος; Lat. *eunuchus*.] One who is castrated or emasculated.

It hath been observed by the ancients, that much of Venus doth dim the sight; and yet eunuchs, which are unable to generate, are nevertheless also dimmed.—*Bacon, Natural and Experimental History.*

**Eunuch.** *v. a.* Make a eunuch. *Rare.*

They eunuch all their priests; from whence 'tis shown,  
That they deserve no children of their own.

*Creek, Translation of Lucretius.*  
**Eunuchate.** *v. a.* Make a eunuch. *Rare.*  
It were an impossible act to eunuchate or castrate themselves.—*Sir T. Browne, Vulgar Errors.*

**Eunuchism.** *s.* State of a eunuch.

That eunuchism, not in itself, but for the kingdom of heaven, is better than it, we doubt not; but when these two are reduced to their subjects their value is according to their use.—*Bishop Hall, Honour of married Clergy*, p. 64.

This voluntary eunuchism is not to be understood literally, as it was by Origen. *Treatise of Epistola concerning Celibacy examined*, pt. II. 782.

**Eupathy.** *s.* [Gr. πάθος = suffering, passion, feeling.] Right feeling.

In *Laertius* we read recorded for a Stoic sentiment, that as the virtuous man had his *πάθος*, or perturbations; so, opposed to these, had the virtuous his *εὐπάθεια*, his *eupathia* or well-feelings, translated by *Stoic* constantia. The three chief of these were Will, defined rational desire; Caution, defined rational aversion; and Joy, defined rational exultation. To these three principal *eupathies* belonged many subordinate species.—*Norris, Three Treatises*, note on *Treatise III*.

**Euphropy.** *s.* [Gr. εὐπρωπία = cook, digest.] Good digestion. (*Euphropic* the adjective. The compounds in *dys-* commoner.)

An age merely mechanical! *Eupropy* its main sign.—*Carlyle, Critical and Miscellaneous Essays, Signs of the Ti*

**Euphemism.** *s.* [Gr. εὐφημία; εὐφώνιος (εὐφί = speak) = literally speak well, but, in its original sense, use words of good omen, or avoid unlucky expressions.] In *Rhetoric*. Way of describing an offensive thing by an inoffensive expression.

Akin to *litotes* is *euphemism*, which may be applied to the same purpose. When it is said of the martyr St. Stephen, that 'he fell asleep,' instead of he died, the euphemism partakes of the nature of metaphor, intimating a resemblance between sleep and the death of such a person. . . . A Roman expressing a strong dislike to a person or thing, would say 'valent,' for it well; which is a kind of ironical euphemism.—*Beattie, Elements of Moral Science*, § 300. (Ord MS.)

**Euphonic.** *adj.* Having euphony as its result; causing harmony in language.

These abbreviations are generally the result of a euphonic process.—*Dr. E. G. Latham, Elements of Comparative Philology.*

**Euphonicus.** *adj.* According to the laws of euphony; harmonious; smooth-sounding.

*Euphonic* languages are not necessarily easy of acquisition. The Fin, in which it is rare to find two concurrent consonants in the same syllable, is too fine and delicate for remembrance. The mind was a conformational combinations, or something equally definite to lay hold of.—*Dr. E. G. Latham, Elements of Comparative Philology.*

**Euphony.** *s.* [Gr. φωνή = voice.] Agreeable sound; contrary to harshness.

Had the Grecians been as careless of euphony and polishing their words in the terminations, as they have been in the initial syllables, their language had been as much inferior to some others in euphony, as now it is esteemed more pleasant and graceful.—*Dalgarno, Didactical Philosophy*, p. 114; Oz 1680.

In verse there is more care of euphony in every part.—*Instructions for Oratory*, p. 138; Oz 1682.

**Euphrasy.** *s.* Herb so called; eyebright: (*Euphrasia officinalis*, a plant supposed to clear the sight).

Then purg'd with euphrasy, and rue,  
The visual nerve; for he had much to see;  
And from the well of life three drops install'd.  
*Milton, Paradise Lost*, xl. 414.

**Euphuism.** *s.* [Gr. εὐ = well, φῆνι = nature, temper.] Affected and pedantic manner of using words which was in vogue at the end of the sixteenth century: ('*England* and his *Euphuus*' being the title of a well-known and influential work by the early dramatist Lyly).

The singular affectation known by the name of euphuism was, like some other celebrated absurdities, the invention of a man of true genius, John Lyly, noticed above as a dramatist and poet the first part of whose prose romance *Euphuus* appeared in 1578 or 1579. 'Our nation,' says Sir Henry Blount, in the preface to a collection of some of Lyly's dramatic pieces, which he published in 1632, 'are in his debt for a new English which he taught them.' 'Euphuus and his England' began first that language; all our ladies were then his scholars; and that beauty in court which could not parley euphuism—that is to say, who was unable to converse in that pure and refined English which he had formed his work to be the standard of—was as little regarded as she which now there speaks not French.

The discourse of Sir Pierre Shafton, in 'The Monastery,' is rather a caricature than a fair sample of euphuism. . . . Perhaps, indeed, our language is, after all, indebted to this writer and his euphuism for not a little of its present euphony. From the strictures Shakespeare, in 'Love's Labour's Lost,' makes Holofemes pass on the mode of speaking of his euphuist, Don Adriano de Amalio, 'a man of fire-new words, fashion's own knight, that hath a mint of phrases in his brain—one whom the music of his own vain tongue doth ravish like enchanting harmony'—it should almost seem that the now universally adopted pronunciation of many of our words are first introduced by such persons as this refining 'child of fancy.' 'I shiver such fanciful fustians, such insouciant and point device companions, such rackets of orthography as to speak dark, fine, when he should say plain; that, when he should pronounce deit d, e, h, t, not d, e, t, he clepeth a calf, calf, half, half; neighbour, neighbour, neighbour, neighbour; this is abominable (which he would call abominable), it instanceth me of lunacy.' Here, however, the all-wise poet laughs rather at the pedantic schoolmaster than at the fantastic knight; and the euphuistic pronunciation which he makes Holofemes so malignantly criticize, was most probably his own and that of the generality of his educated contemporaries.—*Craik, History of the English Language*, I. 471-3.

**Euphuist.** *s.* One who affects Euphuism.

(For example see extract under preceding entry.)

**Euphuistic.** *adj.* Having the character of Euphuism.

(For example see extract under Euphuism.)

**Eurythmy.** *s.* [Gr. εὐρύθμια = rhythm.] Harmony; regular and symmetrical measure. *Rare.*

From these three ideas or designs, viz. orthography, scenography, and profile, it is that *eurythmy*, 'majestic' and 'venustas species adificii, do result.—*Keylyn, Parallel of the ancient Architecture with the modern.*

**Eutaxy.** *s.* [Gr. εὐταξία = arrangement.] Established order. *Rare.*

This ambition made Abalom rebel; nay, it endangered a crack in the glorious *eutaxy* of heaven, which could not be repaired but by the dejection of Lucifer that first quickened it.—*Waterhouse, Apology for Learning*, p. 134; 1653.

**Euthanasia.** *s.* [Gr. θάνατος = death.] Easy happy death.

Let me prescribe and commend to thee, my son, this true spiritual means of thine happy euthanasia, which can be no other than this faithful disposition of the labouring soul, that can truly say, I know whom I have believed.—*Bishop Hall, The Comforter*.  
I ask not to live, O Hebe! give me but gentle death: euthanasia, euthanasia, that is all I implore.—*Taylor*, no. 44.

A recovery, in my case, and at my age, is impossible: the kindest wish of my friends is euthanasia.—*Arbuthnot*.

Our life cannot be pronounced happy, till the last scene is closed with ease and resignation: the mind still continuing to preserve its usual dignity, and falling into the arms of death, as a wearied traveller sinks into rest. This is that *euthanasia* which Augustus often desired, which Antoninus Pius enjoyed, and for which every wise man will pray.—*Lord Orrery on Swift*, p. 168.

**Evacuate.** *v. a.* Evacuate. *Rare.*

Dry air opens the surface of the earth to disincorporate venous bodies, or to evacuate them.—*Harvey, On the Plague*.

2. In Botany and Medicine. Turn upwards; (generally used as the participial adjective, *evered*).

**Every.** *art.* [The elements of this word are, in the first place, *ever* and *each*; the latter being so much disguised as to make its reality, on the first view, problematical. The older form, *everich*, however, shows that a *k* has been softened down, whilst *such* and *which*, as compared with the Scotch *srìth* and *whìth*, explain the loss of the *l*, *each* being the A.S. *ele*.]

But this is itself a compound; and not only that, but one in which the *ev-* in *ever* reappears: *ele* - the root of *ev-er* in a contracted form + *like*. See *Such* and *Which*. Hence, in *every*, the same root appears twice; the result being four elements in three syllables.

The *ev-*, in *ev-er*, is the *ev-* in *ev-en*; for which see *Either*. The notion at the bottom of all its meanings is *time*, or *continuance*; a notion which is clear enough in *ever*, and not very obscure in *even*. When we say '*even*' though you are tired you must go on,' and the like, we mean that, notwithstanding certain reasons to the contrary, reasons in favour of your resting or stopping, the original necessity of proceeding still *continues*. And in the word under notice *ever the like* means so long as the *likeness* lasts the necessity of going on with it exists also. That *ever* and *even* are in the same relation to one another as *there* and *then*, cannot here be shown in detail. All that is noted is the fact of the *r* and *a* being no parts of the original root.

In import, *any*, *each*, and *every* are allied. All mean both *one* and *all*. *Any* is simply a derivative of *one* - *one*; but *any one* individual taken from a class *indifferently*, and said to have certain qualities, tells us that those qualities are shared by the class in general. *Each*, which, as far as the element *the like* goes, is singular, suggests plurality, inasmuch as a series of individuals is taken in order. *Every*, in which the singular element *the like* also enters, differs from *each* only in giving less prominence to selection of the individual. Hence, *any* takes its meaning from the notion of *indifference*; *each* from that of *ordinality*; and *every* from that of *collectiveness*.

But *every* is never used alone. *Any* and *each* can be used alone; but *every* must be followed by either a substantive or *one*, as *every man*, *every one*. This induced the editor to treat it in his grammar as an article, rather than as an ordinary pronoun, and as such it is, accordingly, entered here.]

*Each*; each one of all.

All the congregation are holy, *every one* of them.—*Numbers*, xvi. 3.

**Evesdropper. s.** [The common spelling is *eaves*, which serves to distinguish the word from *eve* = evening; but the refinement, however, if such be the explanation of the spelling, is unnecessary, there being no chance of confusion when the origin of the word from the A.S. *efese* is known, wherein there is not only no *a*, but wherein the *s* belongs to the root and is not the sign of the plural number.] Person who skulks about a house to listen.

And say, wilt please your lordship, wash your hands?

*Id., Taming of the Shrew*, Induct. sc. 1.

**Ex. s.** Name of the twenty-fourth letter in the English alphabet.

**Ex-.** *Ex* is the Latin for out, or out of, often with a *privative* sense. It is also the Greek *ἐξ*. In Latin it has two forms, i.e. one consisting of three sounds and two letters, the *ex* (*ks*) being expressed by the compendium *x*, and the other the simply spelt

and simply sounded *e*. In Greek, also, it has two forms; one *ἐξ*, wherein the *ξ*, letter for letter, is (like the Latin) a compendium for *ex*; and another, *ἐκ*. This last is remarkable for being one out of only two Greek words (*ἐκ* = not, being the other) which end in any consonant except *c*, *p*, and *v*. Both, however, are exceptional. Besides *ἐκ*, there are the forms *ἐκ* and *ἐκ*; whilst *ἐκ* is only used when it precedes a consonant, *ἐξ* being used before a vowel. More than this, *ἐκ* generally precedes the noun it governs, of which it may be considered a part; so that, roughly speaking, neither it nor *ἐκ* breaks the rule as to no word in Greek ending in *c*, or any similar consonant. The Greek *ἐκ* is spelt in English like the Latin, as in *exogen*. The Greek *ἐκ* is spelt with *c*, or as *ec*; the doctrine being that it came to us through the Latin. Hence, what applies to the words now coming under notice, applies also to words like *Eccentric*, and a large proportion of the entries under *ec*. Confusion in spelling arises out of all this; since in a word like *Exogen*, for example, there is nothing except our knowledge of its history and the nature of its second element to tell us whether it be Greek or Latin.

Over and above the forms in *c* and *ξ*, the Greek has the secondary form *ἐκ* = without (rather than simply out), which is even more purely adverbial than the simpler one. And, corresponding with this, it has *ἐκ* = within (from *ἐκ* = in), to match. Most of the derivatives are new words framed for scientific purposes. They run, however, in pairs (*Exogen*, *Endogen*; *Exosmosis*, *Endosmosis*), and are eminently necessary, inasmuch as similar compounds from *in* and *out* in English could not be formed; since it has been seen (see remarks under *Enwrap*) that those two words by no means run parallel in composition.

For certain questions which arise when the second element of the compound begins with *s* (giving the sound of *chs* + *s*) see remarks under *Exult*.

**Exacerbation. s.** Increase of malignity; augmented force or severity; aggravation of a disease; paroxysm.

The patient may strive, by little and little, to overcome the symptom in *exacerbation*; and so, by time, turn suffering into nature.—*Barrow, Natural and Experimental History*.

**Exanthemata. s. pl.** (the singular, *exanthema*, less common.) [Gr. *ἐξάνθημα*.]

In *Medicine*. See extract. (*Exanthematous* its adjective.)

The term *exanthema* was employed by the ancients to signify any cutaneous eruption, whether acute or chronic, febrile or non-febrile; and a similar extension of its signification is very generally observable among medical writers until the commencement of the last century. The nosologists who wrote about the middle, or towards the close, of that century either differed very remarkably as to the diseases which should be ranged under febrile or inflammatory complaints. Sauvages was one of the earliest to make the distinction as to classification, and since he wrote they have been variously classed by authors. The febrile *exanthemata* formed the third order of the third class, in the outline published by me in 1822. I divided them into two sub-orders, viz., (a) those which attack the same person only once, and (b) those which may occur often more than once; and have referred to a different order, such as measles, erythema, roseola, and urticaria, as being chiefly symptomatic of disorder of the digestive organs.—*Copland, Dictionary of Practical Medicine, Exanthematous*.

Browne, Christian Morals*, ii. 3.

The prime productions of our society, which... have darkly and deeply couched under them the most finished and refined systems of all sciences and arts... most vehement anathemas on the head of the new  
Judas, and calling for the consecrated wine on the  
altar, poured some drops into the ink, and so signed  
the *excoctātō* with the blood of Christ. Is  
it to be supposed that the blood of the Redeemer  
was reversed in a less appalling sense than in  
later ages, or that the passion of the Pope triumphed  
not only over Christian moderation, but over the  
strongest religious law? Theodorus was not satis-  
fied with the *excoctātō* of Pyrrhus, he  
*excoctātō* Paul also. Paul revenged himself

that his Zantippe was a scold insufferable; yet he wittily did marry her to exercise his patience, that by the practice of enduring her shrewish heats, he might be able to brook all companies; the brays, the scorns, the sophisms, and the petulanties of rule and unskilful men; the frettings, the thwartings, and the excruciations of life. *Felltham, Remonstrance.*

2. Active; not deliberative; not legislative; having the power to put the laws in force.

The Roman emperors were possessed of the whole legislative as well as *excutive* power.—*Addison, Freeholder.*

Hobbes confounds the *executive* with the legislative power, though all well-instituted states have ever placed them in different hands. *Swift*.  
The Emperor of China has two councils; one, the great council of state, the other a select or privy council; but it cannot be supposed that these

the Emperor are controlled. There are likewise six chief administrative boards, which are, doubtless, merely *executive* departments, consisting of numerous members, but presided over by their proper heads. *Sir G. G. Lewis, On the Influence of Authority in Matters of Opinion*, ch. vii. note A.

**Executive. s.** In *Politics*. Executive, as opposed to the deliberative or legislative, element of government: (as, 'the king is the head of the *executive*').

The executive power, and the assemblies which form a portion of the legislative, ought both, in a well-constituted state, to be subordinate to the law. The fashionable phrase of modern constitutions, that every citizen is equal before the law, is a mockery of truth and common sense in all states where there is one set of laws or regulations for the government and its officials, and another for the mass of the people as subjected to that government. Until neither rank, or official position, or administrative privileges can be pleaded as a ground of exceptional treatment by the agent of the *executive* in matters of justice, there can be no true civil liberty. The law must be placed above the sovereigns and parliaments as well as above ministers and generals. *Finlay, History of Greece under the Ottoman and Venetian Domination*, ch. i.

**Executor. s.** [In this word there is not only a difference of *pulling* but one of *accent* also, regulated in the main, though not wholly (see preceding entry), by the difference of sense.] One who is entrusted to perform the will of a testator.

Let's choose *executors*, and talk of wills;  
And yet not so; for what can we bequeath?  
*Shakespeare, Richard II.* iii. 2.

**Executory. adj.**

1. Having authority to put the laws in force; exercising authority.

A vigilant and jealous eye over *executory* and judicial magistracy; an anxious care of public money; an openness, approaching towards facility, to public complaint; these seem to be the true characteristics of a house of commons. *Burke*.

What person is a king to command *executory* service, who has no means whatsoever to reward it? *Id.*

2. In *Law*. To be executed or performed at a future period.

Contingent or *executory* remainders are, where the estate is limited to take effect, either on a dubious and uncertain person, or upon a dubious and uncertain event. *Sir W. Blackstone, Commentaries on the Laws of England*.

By *executory* devise, a fee, or other less estate, may be limited after a fee. *Id.*

A will indeed! a crinoid woman's will,  
Wherein the devil is an overseer.  
And proud dame Eleanor sole *executress*.  
*Tragedy of King John*: 1611.

**Executrix. s.** Woman entrusted to perform the will of the testator.

He did, after the death of the earl, buy of his *executrix* the remnant of the term. *Bacon*.

Besides, mother, you being sole *executrix*, and having the direction and management of the estate, there remained little business, or I might say none, that I could transact, until you had had time to arrange matters to your satisfaction. *Dickens, Little Dorrit*, ch. v.

**Exegesis. s.** [Gr.: from *ἐξ*, and *ἑρμηναι* (= leud) = leud out, direct, explain, expound.] In *Theology*. Exposition; continuous, systematic, and often paraphrased explanation of any text, especially that of the Scriptures.

*Exegesis* is a term sometimes used by the learned to signify explanation. Several interpreters of the Bible are of opinion that in the passages of the Scripture where we meet with *Abba* *Pater*, two words, the first Syriac and the second Greek or Latin, but both signifying the same thing, the second is only an *exegesis* or explanation of the first. *See: Cyprius, in voce*.

**Exegetical. adj.** Explanatory; expository. *Plainly*, throughout the whole word of God, *truth*, and life, and soul, and spirit, are synony-

mons, and often made *exegetical* one of another. *Smith, Portrait of Old Age*, p. 133.

I have here and there interspersed some critical and some *exegetical* notes, fit for learners to know, and not unfit for some teachers to read. *Walker*.

**Exegetically. adv.** By way of explanation; in an expository manner.

**Exegesis. s.** [see Chromatics.] Exegesis.

In all Western Aramaea... there was but one mode of treating whether *exegesis* or doctrine, the practical. *Newman, Development of Christian Doctrine*, ch. v.

**Exemplar. s.** Pattern; example to be imitated.

The idea and *exemplar* of the world was first in God. *Sir W. Raleigh*.

They began at a known body, a barleycorn, the weight whereof is therefore called a grain; which arithmetically being multiplied to scruples, drachms, ounces, and pounds, and then those weights, as they happen to take them, are fixed by authority, and *exemplars* of them publicly kept. *Hobbes*.

Best poet I fit *exemplar* for the tribe  
Of Phœbus. *Philips*.

He who has learned the duty which he owes  
To friends and country, and to jargon fow;  
Who models his deportment as my last  
Acquaint with brother, sire, or stranger guest;  
Who takes our laws and worship as they are,  
Nor runs reform for senate, church, and bar;  
In practice, rather than loud precept, wise,  
Bids not his tongue, but heart, philosophise:  
Such is the man the poet should rehearse,  
As joint *exemplar* of his life and verse.

*Byron,Hints from Horace*.

**Exemplarily. adv.** In an exemplary manner.

a. So as to *deteroe* imitation.

Be you wisely charitable, and let us be *exemplarily* holy. *Bishop Hall, Remains*, p. 48.

c. In *proof*.

These wild dogs, either by diversity of air or soil, vary their species; as *exemplarily* we see in the Indian owner, which is the product of an European cat. *Sir T. Herbert, Relation of some Years Travels into Africa and the Great Asia*, p. 114.

**Exemplariness. s.** Attribute suggested by Exemplary; fitness for serving as an exemplar or pattern.

In Scripture we find several titles given to Christ, which import his *exemplariness* as of a prince and a captain, a master and a guide. *Archbishop Tillotson*.

**Exemplarity. s.** Fitness for, or worthiness of, imitation.

Sincerity... and *exemplarity*... are the two things, whereby kings who are in age of government, and princes who are in years of discipline, are most advantaged. *W. Montague, Discourse of Kings*, i. p. 97: 1628.

Of some performances of our Saviour no other, or no so probable, an account can be given, as that they were done for *exemplarity*. *Barrow, Sermons*, vol. iii. ser. 3.

**Exemplary. adj.**

1. Deserving to be proposed for imitation: (whether *persons* or *things*).

The archbishops and bishops have the government of the church: be not you mean to prefer any to those places, but only for their learning, gravity, and worth: their lives and doctrine ought to be *exemplary*. *Bacon*.

If all these were *exemplary* in the conduct of their lives, religion would receive a mighty encouragement. *Swift*.

2. Fit for giving warning to others.

3. Attractive of notice and imitation.

Much of his women and their gods ashamed,  
From this hymn of *exemplary* vice  
Resolv'd, as time might aid my thought, to rise.

When any duty is fallen under a general censure and neglect, in such a case the most visible and *exemplary* performance is required. *Rogers*.

The *exemplary* of Demetrius his request to the king was this: Great sir, since I had pleased you to give me commitment to search in all places for all manner of books, &c. *Dante, History of the Septuagint*, p. 20.

**Exemplification. s.** Illustration; case in point; instance.

An ambassador of Scotland demanded an *exemplification* of the articles of peace. *Sir J. Hayward*.

A love of vice as such, a delighting in sin for its own sake, is an imitation, or rather an *exemplification* of the malice of the devil. *South, Sermons*.

No passage in the [Addison's] Campaign has been more mentioned than the simile of the angel, and let it be first inquired whether it be a simile. A poetical simile is the discovery of a likeness between two actions, in their general nature, dissimilar, or of causes terminating by different operations in some resemblance of effect. But the mention of another like consequence from a like cause, or of a like performance by a like agency, is not a simile, but an *exemplification*. . . . When the English are represented as gaining a fortified pass by repetition of attack, and perseverance of resolution; their obstinacy of courage, and vigour of onset, is well illustrated by the sea that breaks with incessant battery the dikes of Holland. This is a simile. But when Addison, having celebrated the beauty of Marlborough's person, tells us that 'Achilles was thus formed of every grace,' here is no simile, but a mere *exemplification*. A simile may be compared to lines converging at a point, and is more excellent as the lines converge from a greater distance: an *exemplification* may be considered as two parallel lines, which run on together without approximation, never far separated, and never joined. *Johnson, Lives of the Poets*, Addison.

The most vivid *exemplification* of the nationality of the Church, and of the character of its connection with the State in England, is found in the noble and august ceremonial of the coronation of the sovereign. *Gladsstone, The State in its Relations with the Church*, ch. vi. § 6.

us.—*Fulton*.

Warburton's Divine Location is also a splendid  
instance of this mode of discussion, and of its in-  
ability to lead to the truth: in fact, it is an attempt  
to adopt the mathematical series of proof, in forest-  
fulness that the mathematician is sure of the truth  
of his definition at each remove, because he creates  
it, as he can do, in pure figure and number. . . . The  
chief use of this first mode of discussion is to sharpen  
the wit, for which purpose it is the best *exercitation*.  
—*Cotteridge*, *Table Talk*.

The witnesses of whom we are speaking must, from the nature of the case, be of a kind whose credibility falls materially short of certainty: let us suppose, then, the credibility of the witness in the case in question to be nine tenths; that is, let us suppose that in every ten statements which the witness makes, nine on an average are correct, and one incorrect. Let us now suppose that there have taken place a sufficient number of drawings to exhaust all the possible combinations, the witness deposing in every one. In one case out of every ten in all these drawings, he will actually have made a false statement. — *J. S. Mill, System of Logic*, iii. 6.

The method of exhaustions was in frequent use among the ancient mathematicians, as Euclid, Archimedes. — *Ross, Cyclopaedia*, in voce.

Drown Hector's vanquish'd in loud exhorta of fight. *Pope, Homer's Iliad, xii.*

**Exhortation. s.**

1. Act of exhorting; incitement to good.  
If we will not encourage publick benevolence, till we are secure of no more small overturs what we help to build, there is no room for exhortations to charity. *Bishop Alt. Bp.*

Persuasion, therefore, depends on, first, argument, (to prove the expediency of the means proposed,) and secondly, what is usually called exhortation, i.e. the excitement of men to adopt those means, by representing the end as sufficiently desirable.—*Whately, Elements of Rhetoric, pt. i. ch. i. § 1.*

2. Form of words by which one is exhorted.

I'll end my exhortation after this

You have heard what the present condition and exigencies of these several charities are.—*Bishop Atterbury.*

Now in such exigencies not to need,  
Upon my word, you must be rich indeed!  
A noble superfluity it craves,  
Not for yourself, but for your fools and knaves. *Pope.*

If... that man is to be accounted the most perfect orator who (as Cicero lays down) can speak the best and need persistently on any question whatever that may arise, it may fairly be doubted whether a first-rate man can be a first-rate orator. He may indeed speak admirably in a matter he has well considered; but when any new subject or new point is started in the course of a debate, though he may take a juster view of it at the first glance, on the exigency of the moment, than any one else could, he will not fail, as a man of more superficial elevation, to perceive how impossible it must be to do full justice to a subject demanding more reflection and inquiry.—*Whately, Elements of Rhetoric, introd.*

It is therefore now universally held that a government which unnecessarily exceeds its powers ought to be visited with severe parliamentary censure, and that a government which, under the pressure of a great exigency, and with pure intentions, has exceeded its powers, ought without delay to apply to Parliament for an act of indemnity. *Macaulay, History of England, ch. i.*

**Exigent. s.**

1. Pressing business; occasion that requires immediate help.

In such an exigent I see not how they could have stand to deliberate about any other treatment than that which already was devised to their hands.—*Hooker, Ecclesiastical Polity, pref.*

In a vernal, when the lid is down, it maketh a more exile sound than when the lid is open. *Id., Natural and Experimental History.*

**Exiled. adj.** Same as the preceding. *Rare.*

Which (to my exiled and slender learning) have made this little treatise somewhat else-playing, dumber, and vaine playes or overtures.—*Northbrooke, Against Dicing: 1677. (Nares by H. and W.)*

**Exilement. s.** Banishment.

Fitzsborn was despatched into a foreign service for a pretty shadow of a command.—*Sir H. Wallon, Characters of Kings of England.*

**Exility. s.** Slenderness; smallness; diminution.

Certain flies, called ephemeræ, live but a day: the cause is the exility of the spirit, or perhaps the absence of the sun.—*Bacon.*

For exility of the voice, or other sounds, it is certain that the voice doth pass through solid and hard bodies, if they be not too thick; and through water, which is likewise a very close body, and such an one as letteth not in air. *Id.*

A body, by being subtilized, can lose nothing of its corporeity: neither can it hereby gain anything but exility; for all degrees of subtilty are essentially the same thing. *Grew.*

It is with great propriety that subtilty, which, in its original import, means exility of particles, is taken, in its metaphorical meaning, for nicety of distinction.—*John, a, Lives of the Poets, Cowley.*

**Eximious. s.** [Lat. *eximius* = excellent.] Famous; eminent; conspicuous; excellent.

Who sees not that, in this first and principal mystery of our religion, the Holy Spirit is exhibited to us as a person, that about him, as such, this excellent part of our duty, this eximious worship is conversant.—*Barrow, Sermons, i. 25.*

lowest depth of sorrow, pain, *examination*.—*Bishop Hall, Mystery of Godliness*, § 3.  
Philosophy calls the impenitent sinner, of returning the gross habit of sin to a spurious and alienation of stature, an *examination* of that carnal appetite which hath brought in all the crosser joys which hitherto we have fed on.—*Hammond, Works*, iv, 178.

If the assumption of the form of a servant be contemporary with his *examination*; if that *examination* necessarily presupposes a plenitude as indispensably antecedent to it, if the form of God be also coeval with that preceding plenitude, then must we confess, Christ was in the form of God, before he was in the form of a servant.—*Bishop Pearson, Exposition of the Creed*, art. ii.

Diseases of *examination* are more dangerous than diseases of repletion.—*G. Herbert, Country Parson*, ch. xvi.

He is not more impotent in his glory than he was in his *examination*.—*Dr. H. More, Decay of Christian Piety*.

# **Exintricate. v. a. Exintricate. Rare.**

A man surprised is even in reason left beaten; being taken at a disadvantage from which he has no way to extricate himself but by the dexterity of his ingenuity. *Philham, Remains*, li, 60.

# **Exist. v. n. [see Existence.] Have a being.**

It is as easy to conceive that an Almighty Power might produce a thing out of nothing, and make that to exist de novo, which did not exist before; as to conceive the world to have had no beginning, but to have existed from eternity.—*South, Sermons*.  
It seems reasonable to enquire, how such a multitude comes to make but one idea, since that combination does not always exist together in nature.—*Locke*.

One year is past, a different scene!  
No farther mention of the dead;  
Who now alas, no more is missed  
Than if he never did exist. *Swift*.

(See also last entry under next entry.)

**Existence. s. [Exist differs from the so called verba substantiva, *am, in, was, he* (see Am, Be), in never being used as a copula; and from the derivatives of *ens*, so long as they are other than compound, in suggesting the notion of objective or real, rather than subjective or nominal, being (see Entity). The verbal element in *exist* is *sto*—stand, from which *si-sto* is formed by reduplication, the adverbial element being *ex*. In *entity* there is no adverbial element; and the verbal element is *ens*. In *essence*, the verbal element is the same as in *ens*, the adverbial element the same as in *ens*, the verbal before us, i. e. the *ex* is a modification of *ex*; having nothing to do with the Latin Infinitive *esse*. *Essentia* *essentia* Gr. *ἐσέν*, and, in so far as it denotes an actual power or quality, more nearly allied in import with Existence than with Entity.] State of being; actual possession of being.**

The soul, secur'd in her existence, smil'd  
At the drawn dagger, and defies its point.

*Adrian, Cato*.

When a being is considered as possible, it is said to have an essence or nature; such were all things before the creation. When it is considered as actual, then it is said to have existence also. *Watts, Logic*.

What does existence relative in time imply? It implies, I, that we are unable to realise in thought; on the one side of the imperative, either an absolute commencement or an absolute termination of time; as on the other, either an infinite non-continuance, or an infinite non-termination of time.—*Sir W. Hamilton, Discussions*, v, p. 591.

In the first book we found that all the assertions which can be conveyed by language, express some one or more of five different things; *existence*; order in place; order in time; causation; and resemblance. Of these, causation, in our view of the subject, not being fundamentally different from order in time, the five species of possible assertions are reduced to four. The propositions which affirm order in time, in either of its two modes, co-existence and succession, have formed, thus far, the subject of the present book. And we have now concluded the exposition, so far as it fills within the limits assigned to this work, of the nature of the evidence on which these propositions rest, and the processes of induction by which they are ascertained and proved. There remain three classes of facts; *existence*, order in place, and resemblance; in regard to which the same questions are now to be resolved. Regarding the first of these, very little needs be said. *Existence* in general, is a subject not for our science, but for metaphysics. To determine what things can be recognised as really existing, independently of our own sensible or other impressions, and in what meaning the term is, in that case,

predicated of them, belongs to the consideration of things in themselves, from which, throughout this work, we have as much as possible kept aloof. *Existence*, so far as logic is concerned about it, has reference only to phenomena, to actual, or possible, states of external or internal consciousness, in ourselves or others. Feelings of sensitive beings, or possibilities of having such feelings, are the only things the *existence* of which can be a subject of logical induction, because the only things of which the existence in individual cases can be a subject of experience. It is true that a thing is said by us to exist, even when it is absent, and therefore is not and cannot be perceived. But even then, its *existence* is to us only another word for our conviction that we should perceive it on a certain supposition; namely, if we were in the possible circumstances of time and place, and endowed with the useful perfection of organs. My belief that the Emperor of China exists, is simply my belief that if I were transported to the Imperial Palace or some other locality in Peking, I should see him. My belief that Julius Cæsar existed, is my belief that I should have seen him if I had been present in the field of Pharsalia, or in the senate-house at Rome. When I believe that stars exist beyond the utmost range of my vision, though assisted by the most powerful telescopes yet invented, my belief, philosophically expressed, is, that with still better telescopes, if such existed, I could see them, or that they may be perceived by beings less remote from them in space, or whose capacities of perception are superior to mine. The *existence*, therefore, of a phenomenon, is but another word for its being perceived, or for the inferred possibility of perceiving it. When the phenomenon is within the range of present observation, by present observation we assure ourselves of its *existence*; when it is beyond that range, and is therefore said to be absent, we infer its *existence* from marks or evidences. But what can these evidences be? Other phenomena, ascertained by induction to be connected with the given phenomenon, either in the way of succession or of co-existence. The simple *existence*, therefore, of an individual phenomenon, when not directly perceived, is inferred from some inductive law of succession or co-existence; and is consequently not amenable to any peculiar inductive principles. We prove the *existence* of a thing, by proving that it is connected by succession or co-existence with some known thing. With respect to general propositions of this class, that is, which affirm the bare fact of *existence*, they have a peculiarity which renders the logical treatment of them a very easy matter; they are generalizations which are sufficiently proved by a single instance. That ghosts, or unicorns, or sea-serpents exist, would be fully established if it could be ascertained positively that such things had been ever once seen. Whatever has once happened, is capable of happening again; the only question relates to the conditions under which it happens. So far, therefore, as relates to simple *existence*, the inductive logic has no knots to untie.—*J. S. Mill, System of Logic*, ch. xiv, § 1.

# **Existency. s. Existence.**

Nor is only the *existence* of this animal considerable, but many things delivered thereof.—*Sir T. More, Vulgar Errors*.

It is impossible any being can be eternal with successive eternal physical changes, or variety of states, or manner of *existence*, naturally and necessarily concomitant unto it.—*Sir M. Hale*.

It is a pleasant story that we forego, who are the only imperfect creatures in the universe, are the only beings that will not allow of imperfection. Somebody has taken notice, that we stand in the middle of *existence*, and are by this one circumstance the most unhappy of all others.—*Tulter*, no. 216.

How this is to be accounted for I know not; but men's *existimatio* follows us according to the company we keep.—*Spectator*, no. 434. (Rich.)

# **Existing. part. adj. Actual; connected with the time being.**

Notwithstanding his narrow-minded notions on political matters, his slavish adherence to the Tory party, his bigoted veneration for *existing* things, and hatred of all disaffection, or even discontent, the courage and perseverance which he displayed . . . was not surpassed by the technical ability which he showed.—*Lord Brougham, Historical Sketches of Statismen of the Reign of George III.*, Lord Chief Justice Gibbs.

**Exit. s. [from the third person singular of the present tense of Lat. *exeo* (*ex* = out, and *eo* = go) = go out; the meaning being 'he' or 'she goes out,' or 'makes an exit.']] Term set in the margin of plays to mark the time at which the player goes off the stage; act of quitting the stage; act of quitting the theatre of life.**

All the world's a stage,  
And all the men and women merely players;  
They have their *exits* and their entrances,  
And one man in his time plays many parts.

*Shakespeare, As you like it*, li, 7.  
A reward for fame becomes a man more towards the *exit*, than at his entrance into life. *Swift*.  
Many of our old comrades live a short life, and make a figure at their *exit*.—*Id.*

# **Exitious. adj. Same as Exitial. Rare.**

To this end is come that beginning of setting up of images in churches, then judged harmless, in experience proved not only harmful, but *exitious* and pestilent.—*Hemilce against Idolatry*, pt. iii.

**Exode. s. [Gr. *ἐξόδος*.] Interlude, or farce, following a tragedy.**

The Romans had three plays acted one after another, on the same subject; the first a real tragedy, the second the *Atellan*; the third a satire or *exode*, a kind of farce of one act.—*Lord Kames, ed.*

**Exodus. s. [Gr. *ἐξόδος*.] Departure; journey from a place: (the second book of the Pentateuch is so called, because it describes the journey of the Israelites from Egypt).**

The men of Hamd date all their publick matters especially, from this *exodus*, onspring forth of the children, setting it down next to the year of our Lord.—*Gregory, Posthuma*, p. 107.

# **Exody. s. Same as Exodus.**

In all probability their years continued to be three hundred and sixty-five days, ever since the time of the Jewish *exody* at least.—*Sir M. Hale, Origin of Mankind*.

**Exogen. s. Exogenous plant, tree, or herb. See Exogenous.**

**Exogenous. adj. [Gr. *ἐξω* = out, without, and the root of *γεννέω* = be born, become; *γενε* = generation, race: opposed to Endogenous, from *ἐντός* = within.] In Botany. Increasing or growing outwardly, i. e. from the axis or centre to the circumference: (*endogenous* meaning the opposite, or growing inwardly, or with a direction towards the centre rather than the circumference. As the *exogenous* flowering plants have two seed-leaves, or cotyledons, and the *endogenous* but one, the terms *exogenous* and *dicotyledonous* coincide; as do *endogenous* and *monocotyledonous*).**

In its internal structure the stem of flowering plants is subject to two principal and to several subordinate modifications. The former are well illustrated by such plants as the oak and the cane. . . . A transverse slice of the former exhibits a central substance or pith, an external cellular integument

or bark having a fibrous lining or fiber, an intermediate woody mass, and certain fine lines radiating from the pith to the bark, through the wood, and called medullary rays; this is called the *exopneuma* structure. In the cane, on the contrary, neither bark, nor pith, nor wood, nor medullary rays are distinguishable; but the transverse section exhibits a larger number of holes irregularly arranged, and caused by the action of holocretismatous and vascular tissue, and of the mass of woody and cellular substance in which they lie imbedded. This kind of structure is named *endopneuma*. . . . According to Dutrochet and others, the pith does not extend into the root of *cyperus*; and it certainly occurs there, when woody, in very small quantity, if at all. . . . Each zone of the vascular system of an *cyperus* stem being the result of a single year's growth, it should follow that to count the zones apparent in a transverse section is sufficient to determine the age of the individual tree under examination. . . . In this view of the growth of *endopneuma* the trunk of such plants must consist of a series of arcs, directed from above downwards, and then from within outwards. . . . If Mill's view of the structure of *endopneuma* be correct, they must after a time lose the power of growing, in consequence of the whole of the lower part of their stems being choked up by the multitude of descending woody bundles. The lower part of their bark, too, must be much harder, that is much more filled with woody bundles, than the upper. The hardness of the exterior of palm stems cannot be owing to the pressure of new matter from within outwards, but to some cause analogous to the formation of heart-wood in *cyperus*.—*Lindley, Introduction to Botany*, b. i, ch. ii, sect. II, § 1, 2.

Very few kinds of the genera of plants, or even of the families, can be pronounced with certainty to be kinds. The great distinctions of vascular and cellular, diodeschismatous or *cyperus* and monodeschismatous or *endopneuma* are perhaps differences of kind; the those of denervation which divide those classes seem (though even on this I would not pronounce positively) to go through the whole nature of the plants. But the different species of a genus, or even of a family, usually have in common only a limited number of characters.—*J. S. Mill, System of Logic*.

**Exolate, adj.** [Lat. *exolatus*: part. of *exolascere*—begin to grow old, or worn out.] Stale. *Rare*.

By sin to foul *exorbitant* desire.

These phenomena are not peculiar to earthquakes in our times, but have been observed in all ages, and particularly those *exorbitant* commotions of the waters of the globe.—*Woodward, Essay towards a Natural History of the Earth*.

2. Anomalous; not comprehended in a settled rule or method.

The Jews, who had laws so particularly determining in all affairs what to do, were notwithstanding continually intruded with causes *exorbitant*, and such as their laws had not provided for.—*Hooker, Ecclesiastical Polity*.

3. Enormous; beyond due proportion; excessive.

Their subjects would live in great plenty, were not the impositions so very *exorbitant*; for the courts are too splendid for the territories.—*Addison, Travels in Italy*.

**Exorbitato, v. n.** Deviate; go out of the track or road prescribed. *Rare*.

A wise intermixture of some irregularities puts men upon reflection, and gives them to understand, that Nature's ill-shaped letters at one time are an assurance, that she could not write so fairly and evenly as generally, had she not some Great Master to guide her hand, and lend in the power of some entrance not to *exorbitate* and fly out.—*J. Spencer, Discourse concerning Prædilection*, p. 132: 1663.

The planets sometimes would have approached the sun as near as the orb of Mercury, and sometimes have *exorbitated* beyond the distance of Saturn.—*Kepler*.

And friars, that through the wealthy regions run,  
Resort to farmers rich, and bless their halls,  
And *exorcise* the beds, and cross the walls. —*Dryden*.

**Exorciser, s.** One who exorcises: (in the extract *Exorcist* in its second sense).

how few! —*Dryden, Childs Harold*, iv. 21.

**Exorcist, s.**

1. One who by adjurations, prayers, or religious acts, drives away malignant spirits.

Then certain of the vagabond Jews, *exorcists*, took upon them to call over them which had evil spirits. —*Acts*, xii. 13.

He who hath had the patience of Diogenes, to make oration unto statues, may more sensibly apprehend how all words fall to the ground, spent upon such a hard and careless generation of men, stupid unto all instruction, and rather requiring an *exorcist* than an orator for their conversion!—*Sir T. Browne, Christian Morals*, iii. 6.

2. Enchanter; conjurer; raiser of spirits

Thou, like an *exorcist*, hadst conjur'd up  
My mortified spirit.

Recalls the true office of mine eyes?  
Is't real that I see?

*Id.*, *All's well that ends well*, v. 3.

**Exordial, adj.** Introductory.

The greatest underpinning of this life is to underwrite that, unto which this is but *exordial*, or a passage leading unto it.—*Sir T. Browne, Christian Morals*, iii. 25.

Profundity of paragraph and length of sentence are peculiar to Milton. This is seen . . . in some of his *exordial* invocations in the *Paradise Lost*. —*T. Warton, Preface to Milton's smaller Poems*.

If the *exordial* verses of Homer be compared with the rest of the poem, they will not appear remarkable for plainness or simplicity, but rather eminently adorned and illuminated.—*Johnson, Rambler*, no. 158.

**Exordium, s.** [Lat.] Formal preface; proemial part of a composition; preliminary, or introductory, speech.

Captain Bossus, you are a rank rascal, without more *exordiums*.—*Beaumont and Fletcher, King and No King*.

With circumstance, and long *exordiums* here.

*Mary, Translation of Virgil*.  
I have been distast'd at this way of writing, by reason of long prefaces and *exordiums*.—*Addison, Dialogues on the Usefulness of ancient Metaphors*.

The *exordium* of the National Covenant, or Confession of Faith, first subscribed in Scotland in 1580, and again on many subsequent occasions, will afford the most apt and complete illustration to my argument. It runs thus:—'We all and every one of us underwritten, protest, &c.'—*Gladding, The State in its Relations with the Church*, ch. vii.

**Exornation, s.** [Lat. *ornatus*, pass. part. of *orno*—adorn.] Ornament; decoration; embellishment.

This *exornation* [amplification] was first devised and ordained to increase causes, and enrich the oration with words and sentences.—*Prochem, Garden of Eloquence*, sign. N. ii. b. 1577.

It seems that all these various *exornations* should rather cease.—*Hooker, Ecclesiastical Polity*. Hyperbolic *exornations*, elegancies, &c., multiply much affect.—*Barton, Anatomy of Metaphors*, to the reader, p. 14.

**Exosmose, s.** [Gr. *ἐξω*—out, outwards, without, and *σμός*—impel; in Endosmose, *ἐνσω*—in, inwards, within.] See extract.

(Both words, of recent origin, are common in Physics, *exosmosis* and *endosmosis* being correlative forms. *Exosmotic* and *Endosmotic* are derivatives; *Osmotic* the general term, being rarer.)

Dutrochet . . . found that small bladders of animal and vegetable membrane, being filled with a fluid of greater density than water, securely fastened, and then thrown into water, acquired weight; he also remarked that, if the experiment were reversed, by filling them with water and immersing them in a denser fluid, the contrary took place, and the bladders lost weight. . . . From these and other experiments, Dutrochet arrived at the inference that, if two fluids of unequal density are separated by an animal or vegetable membrane, the denser will attract the less dense through the membrane that divides them; and this property he calls *endosmosis*, when the attraction is from the outside to the inside; and *exosmosis* when it operates from the inside to the outside.—*Lindley, Introduction to Botany*, ii. 331.

It has been fully established, that fluids may and do pass into, and out of, the veins in the living body, not by any vital process, but by mere physical imbibition and transmutation. . . . But when the veins are distended to a certain degree with watery fluid, the entrance of more of the same fluid through their sides is impeded or prevented. . . . and that . . . when the veins are comparatively empty, the surrounding serous fluid passes readily into them, or, in common language is absorbed. The

venous absorption is explicable therefore upon the principles of *exosmosis* and *exosmosis*, as laid down by Dutrochet. *Dr. Watson, Lectures on the Principles and Practice of Physic*, lect. xvi.

**Exosésion.** *s.* [Lat. *exosésio*, -*osis*; from *ex* = out, *os* = bone.] Depriving of bone or its analogue. *Rare*.

**Exotérie.** *adj.* Public: (applied to the double doctrine of certain ancient philosophers). See *Esotérie*.

The discourse was perfect, so far at least as the *exotérie* exposition of details succeeded in concealing the real or supposed *esotérie* stream of truth, which certainly was sufficiently concealed. *J. Fisher, Essays*, iii.

Among the habitual dwellers in these delicate halls, there was a tacit understanding, a prevalent doctrine that required no formal exposition, no proofs and illustrations, no comment and no gloss, which was based rather a traditional conviction than an imparted dogma; that the *exotérie* public were on many subjects the victims of very vulgar prejudices, which those enlightened persons wished neither to disturb nor to adopt. *Diarracti the young, Comings*.

**Exotérique.** *adj.* Same as *Exotérie*.

Aristotle was wont to divide his lectures and readings into *exotérique* and *esotérique*. Some of them contained only choice matter, and they were read privately to a select auditory; others contained but ordinary stuff, and were promiscuously and in public exposed to the hearing of all that would. *Sir M. Hale, Golden Remains*, p. 134.

Having examined the means of fertilization in so many British orchids, belonging to fourteen genera, I was anxious to ascertain whether the *exotie* forms, belonging to quite distinct tribes, equally required insect agency. . . . By the kindness of many friends and strangers I have been enabled to examine fresh flowers of several species belonging to forty-three *exotie* genera, well dispersed through the sublimities of the vast archæan series. *Darwin, Fertilization of Orchids*, ch. v.

Our national sobriety never wandered into these *exotie* extravagances. *C. H. Pearson, The early and middle ages of England*, ch. xxiv.

Claudius was seated on the other summit, which was barren, and produced, on some spots, plants that are unknown to Italy, and such as the gardeners call *exotie*. *Addison, Guardian*.

**Exotical.** *adj.* Same as *Exotie*. *Rare*.

How many have we seen, and pined, which have brought nothing from foreign countries but misshapen clothes, or *exotical* gestures, or new names, or affected insipids, or the diseases of the place, or (which is worst) the vices! *Bishop Hall, Letters to the Earl of Essex*, ep. 8.

Shall they, who have been trained up in so clear a light of the Gospel, begin to cast wanton eyes upon their (the papists') glorious superstitions? and contrary to the laws of God, and our sovereign, throw to their *exotical* devotions? *Id., Remains*, p. 61.

On the smooth expanse of crystal lakes, The sinking stone at first a circle makes; The troubling surface, by the motion stir'd, Spreads in a second circle, then a third; Wide, and more wide, the floating rim advances, Fill all the wat'ry plain, and to the margin dances.

**Expansibility.** *s.* Capacity of extension; possibility of being expanded or spread into a wider surface.

1. Range at large; rove without any prescribed limits.

I have more *expatriated* in this camp than they did. *Leland, New Year's Gift*, sign. F. 3, b. 1540. Religion contracts the circle of our pleasures, but

leaves it wide enough for her votaries to *expátiate* in. *Addison, Spectator*.

He looks in heav'n with more than mortal eyes, Hides his free soul *expátiate* in the skies; Amidst her kindred stars familiar roam, Survey the region, and confound her home. *Pope*. Awake, my St. John, leave all meaner things To low ambition and the pride of kings; Let us, since life can little more supply Than just to look about us and to die, *Expátiate* free o'er all this scene of man; A mighty mass! but not without a plan. *Id.*

This battle is memorable as the first of a long series of battles in which the Irish troops retrieved the honour lost by misfortune and misconduct in domestic war. Some of the robes of Lincolns showed, on that day, under the standard of France, a valour which distinguished them among many thousands of brave men. It is a remarkable fact that, on the same day, a battalion of the persecuted and *expátiated* Huguenots stood firm amidst the general disorder round the standard of Savoy, and fell fighting desperately to the last. *Macaulay, History of England*, ch. 22.

6. With special application to the theory of  
probabilities.

What is the reason that in a box where there are  
nine black balls and one white, we expect to draw  
a black ball nine times as much (in other words,  
nine times as often, frequency being the gauge of  
intensity in *expectation*) as a white? Obviously be-  
cause the local conditions are nine times as favour-  
able, because the hand may alight in nine places  
and get a black ball, while it can only alight in  
one place and find a white ball. . . . It is, in fact, evident,  
that when once causation is admitted as an universal  
law, our *expectation* of events can only be rationally  
grounded on that law. — *J. S. Mill*.

promote the separation of the viscid phlegm with  
which the bronchiae are loaded than simply inviscid  
or dilute it; though these are also treated as *expec-*  
*torants* by many writers. The list of the proper *ex-*  
*pectorants* employed formerly was very voluminous;  
... we see evident proofs of an *expectorant* power  
in many medicines, as in gum ammoniac, where we  
have no proof whatever of increased exhalation from  
the surface of the body. — *Mason Good*.

**Expectorate. v. a.** Eject from the breast.

Are making hither with all due *expédience*.

**Expédience. s.** Same as Expédience;

(than which, in some senses at least, it is

a commoner word).

Solemn dedication of things set apart for divine  
worship, could never have been universally prac-  
tised, had not right reason dictated the high *ex-*  
*pedience* and great use of such practices. — *South,*  
*Sermons*.

An instance occurs in Thucydides, in which this  
is very judiciously and neatly pointed out; in the  
debate respecting the Mityleneans, who had been  
subdued after a revolt, Cleon is introduced contend-  
ing for the justice of inflicting on them capital  
punishment; to which Demosthenes is made to reply,  
that the Athenians are not sitting in judgment on  
the offenders, but in deliberation as to their own  
interest, and ought therefore to consider, not the  
right they may have to put the revolvers to death,  
but the *expédience* or expediency of such a pro-  
cedure. . . . Much declamation may be heard in the

present day against *expédience*, as if it were not the  
proper object of a deliberative assembly, and as if it  
were only pursued by the unprincipled. — *Whately,*  
*Elements of Rhetoric*, pt. ii. ch. i. § 1, and note.

**Expédient. adj.** [Lat. *expédio* = fit, suit, be  
advantageous: the opposite of *impedio* =  
hinder.]

## 1. Proper; fit; convenient; suitable.

All things are not *expédient*: in things indifferent  
there is a choice; they are not always equally *ex-*  
*pedient*. — *Hooker, Ecclesiastical Polity*.

When men live as if there were no God, it becomes  
*expédient* for them that there should be none; and  
then they endeavour to persuade themselves so. —  
*Archbishop Tillotson*.

The enemy made their defence so good, that, to-  
wards afternoon, Scipio found it *expédient* to recall  
his men from the assault. — *Arnold, History of Rome*,  
p. 47.

## Used substantively with the.

For a patriot too cool, for a drudge disobedient,  
And too fond of the rights to pursue the *expédient*.  
In short, 'twas his fate, unemployed or in place,

*Mr.*  
To eat mutton cold and cut blocks with a razor.  
*Goldsmith, Retaliations*.

## 2. Immediate; expeditious.

The adverse winds,  
Whose leisure I have staid, have given him time  
To land his legions all as soon as I:  
His marches are *expédient* to this town.

*Shakespeare, King John*, ii. 1.

**Expédient. s.**1. That which helps forward, as means to an  
end.

God does not project for our sorrow, but our in-  
nocence; and would never have invited us to the  
one, but as an *expédient* to the other. — *Dr. H. More,*  
*Essay of Christian Piety*.

## 2. Shift.

He flies to a new *expédient* to solve the matter,  
and supposes an earth of a make and frame like that  
of the Caries. — *Waller*.

Under the influence of this desire, if [political  
economy] shows mankind accumulating wealth, and  
employing that wealth in the production of other  
wealth; sanctioning by mutual agreement the in-  
stitution of property; establishing laws; . . . and  
employing certain *expédients* (as money, credit, &c.)  
to facilitate the distribution. — *J. S. Mill, System of*  
*Logic*, ii. 462.

This may be called the theory of developments;  
and, before proceeding to treat of it, two remarks  
may be in place. First, it is undoubtedly an hypo-  
thesis to account for a difficulty; and such too are  
the various explanations given by astronomers from  
Ptolemy to Newton of the apparent motions of the  
heavenly bodies. But it is as unphilosophical on  
that account to object to the one as to object to the  
other. . . . Doubtless, the theory of the secret and the  
theory of developments are *expédient*, and so is the  
dictum of Vincentius; so is the art of grammar, or  
the use of the quadrant; it is an *expédient* to enable  
us to solve what has not become a necessary and an  
anxious problem. — *Arbuthnot, Development of Chris-*  
*tian Doctrine*, introd.

The *expédient* adopted showed the urgency of the  
danger. — *Arnold, History of Rome*, ch. xlv.

**Expédiently. adv.** In an expedient man-  
ner; fitly; suitably; conveniently: (in the  
following extract it means *hastily, quickly*).

Let my officers of such a nature  
Make an extent upon his house and lands;  
Do this *expédiently*, and turn him going.

*Shakespeare, As you like it*, iii. 1.

**Expédiate. v. a.** In *Forest Law*. Mutilate  
dogs by cutting out the ball of each of the  
forefoot, to prevent their running down the  
royal game.

In the forest laws, every one that keeps a great  
dog not *expédiated*, forfeits three shillings and four  
pence to the king. — *Chambers*.

**Expéditation. s.** Mutilation of dogs' feet.  
The king granted to him free chase and free warren  
in all those his lands, both within and without  
the forest; also freedom from the *expéditation* of  
dogs. — *Ashmole, Antiquities of Berkshire*, ii. 423.
**Expédite. v. a.**

## 1. Facilitate; free from impediment.

By sin and death a broad way now is pav'd,

To *expédite* your glorious march.

*Milton, Paradise Lost*, x. 473.

## 2. Hasten; quicken.

An inquisition would still be a further improve-  
ment, and would *expédite* the conversion of the  
Papists. — *Swift*.

Poor creature! that is to say, wicked woman! —  
for we are not of those who set themselves against  
the verdict of society, or ever omit to *expédite*, by a  
gentle kick, a falling friend. — *Disraeli the younger,*  
*The young Duke*.

# EXPEDITE } EXPE

3. Despatch; issue from a public office.  
Though such charters be *expeditel* of course, and as of right, yet they are varied by discretion.—*Bacon*.

**Expedito. adj.**

1. Quick; hasty; soon performed.  
Wholesome advice, and *expedito* execution, in freeing the state of those monsters.—*Shakespeare*.

2. Easy; disencumbered; clear from impediments.  
Nature can teach the church but in part; neither so fully as is requisite for man's salvation, nor so easily as to make the way plain and *expedito* enough, that many may come to the knowledge of it, and so be saved, and therefore the Scripture has been given.—*Hooker, Ecclesiastical Polity*.

3. Nimble; active; agile.

The more any man's soul is cleansed from sensual lusts, the more nimble and *expedito* it will be in its operations.—*Archbishop Tillotson*.

4. Light-armed. *Latinism*.

He sent the lord chamberlain with *expedito* forces to speed to Exeter, to the rescue of the town.—*Bacon, History of the Reign of Henry VII.*

**Expedito. adv.** In an expedito manner; with quickness, readiness, or haste.

Nature left his ears naked, that he may turn them more *expedito* for the reception of sounds from every quarter.—*Green*.

**Expeditiveness. s.** Attribute suggested by *Expedito*.

Wrestlers and fencers were wont to use their hands unto heavy weights, that when in their games they were to use them empty and naked, to do it with the more *expeditiveness* and pleasure.—*Bishop Reynolds, On the Passions*, 215. (Ord MS.)

**Expeditio. s.**

1. Haste; speed; activity.  
Prayers, whereunto devout minds have added a piercing kind of brevity; thereby the better to express that quick and speedy *expeditio* wherewith ardent affections, the very winners of prayer, are delighted to present our souls in heaven.—*Hooker, Ecclesiastical Polity*.

Even with the speediest *expeditio*

I will dispatch him to the emperor's court.—*Shakespeare, Two Gentlemen of Verona*, i. 3.

2. March or voyage with martial intentions.  
Young Octavius, and Mark Antony, Come down upon us with a mighty power, Bending their *expeditio* toward Philipp.

It may easily be supposed, that by Alexander here his full share in the labours and hardships of the *expeditio*. He accompanied his men during their longest marches on foot; and it was perhaps on one of these occasions that he gave an example of self-command, which served to animate their courage, while it raised him in their esteem.—*Bishop Thirlwall, History of Greece*, ch. IV.

**Expeditious. adj.** Having the character of, relating to, or constituted by, an expedition.

The *expeditious* forces were now assembled.—*Goldsmith, History of Greece*.

**Expeditious. adj.**

1. Speedy; quick; soon done: (as, 'an *expeditious* march').

I'll deliver all;  
And promise you calm seas, auspicious gales,  
And sail so *expeditious*, that shall catch  
Your royal fleet far off.—*Shakespeare, Tempest*, v. 1.

2. Nimble; quick; swift; acting with celerity: (as, 'an *expeditious* runner').

**Expeditive. adj.** Performing with speed.  
I mean not to purchase the prize of *expeditiveness* in that kind; but as one, that have a feeling of my duty, and of the ease of others, my endeavour shall be to hear patiently.—*Bacon, Speech on taking his Place in Chancery*.

**Expel. v. a.** [Lat. *expello*; from *pello*—drive; pass. part. *expulsus*; *expulsi*, *expulsi*.]

1. Drive out; force away.  
The Lord your God shall *expel* them from before you, and drive them from out of your sight.—*Joshua*, xiii. 5.

Suppose a mighty rock to fall there, it would *expel* the waters out of their places, with such violence as to fling them among the clouds.—*T. Burnet, Theory of the Earth*.

2. Eject; throw out.  
Whatsoever cannot be digested by the stomach, is either put up by vomit, or put down to the evis, and other parts of the body are moved to *expel* by consent.—*Bacon, Natural and Experimental History*.

The virgin huntress was not slow  
To *expel* the shaft from her contracted bow.—*Dryden*.

# EXPE

3. Banish; drive from the place of residence.  
Arms, and the man I sing, who forc'd by fate,  
And haughty Juno's unrelenting hate,  
*Expell'd* and exil'd left the Trojan shore.—*Dryden, Virgil's Æneid*.

4. Reject; refuse.

And would you not poor fellowship *expel*,  
Myself would offer you 'tween us my part,  
In this adventurous chanceling jeopardy.—*Spenser, Mother Lubber's Tale*.

3. Keep off; exclude; keep out.

Since she did neglect her looking-glass,  
And threw her sun-expelling mask away,  
The air hath star'd the roses in her cheeks,  
And pitch'd the lily tincture of her face.  
*Shakespeare, Two Gentlemen of Verona*, iv. 3.  
O that the earth which kept the world in awe  
Should patch a wall to *expel* the winter's flaw.—*Sh. Hamlet*, v. 1.

**Expeller. s.** One who, or that which, expels or drives away.

Unspotted faith, *expeller* of all vice,  
And most undoubted argument to prove  
A mind descended nobly.—*Sir R. Fanshawe, Translation of Guarini's Pastor Fido*, p. 74.

**Expens. v. a.** [Lat. *expendo*, pass. part. *expensus*, originally = weigh out, thence disburse, disburse, spend.] Lay out; spend.  
The king of England wasted the French king's country, and thereby caused him to *expens* such sums of money as exceeded the debt.—*Sir J. Hayward*.

**Expensiture. s.** Cost; disbursement.

I cannot forget the joy with which I exclaimed a bank-note of twenty pounds for the twenty of the Memoirs of the Academy of Inscrip-  
tion would it have been easy, by any other way of the same sum, to have procured so large and lasting a fund of rational amusement.—*Gibbon, Memoirs*, p. 37.

A single dot would overpay  
Th' *expensiture* of every day.—*Cooper*.  
A state cannot have more wealth at its command than may be employed for the general good, a liberal expensiture in national works being one of the surest means of promoting national prosperity; and the benefit being still more obvious, of an expensiture directed to the purposes of national improvement. But a people may be too rich.—*Southey, Colloquia on Society*.

To raise its body through a given space, its muscles have to be contracted with twice the intensity, at a double cost of matter expended. This necessity will be seen still more clearly if we leave out the motor apparatus, and consider only the forces required and the means of supplying them. For since, in similar bodies, the areas vary as the squares of the dimensions, and the masses vary as the cubes; it follows that the absorbing surface has become four times as great, while the weight to be moved by the matter absorbed has become eight times as great. If then, a year ago, the absorbing surface could take up ten units of nutriment as was needed for *expensiture*, this leaving one-half for growth, it is now able only just to meet *expensiture*, and can provide nothing for growth. However great the excess of assimilation over waste may be during the early life of an active organism, we see that because a series of numbers increasing as the cubes, overtakes a series increasing as the squares, even though starting from a much smaller number, there must be reached, if the organism lives long enough, a point at which the surplus assimilation is brought down to nothing—a point at which *expensiture* balances nutrition—a state of moving equilibrium.—*Herbert Spencer, Inductions of Biology*.

**Expense. s.** Cost; charge; money expended.  
Hence comes that wild and vast *expense*,  
That hath enforc'd Rome's virtue thence,  
Which simple poverty first made.—*B. Jonson, Catiline*.

A feast prepar'd with riotous *expense*,  
Much cost, more care, and most magnificence.—*Dryden*.

Such provision made, that a country should not want so many springs as were convenient, and afford a supply every where suitable to the necessities and *expensiveness* of each climate.—*Woodward*.  
I can see no reason by which we were obliged to make those prodigious *expensiveness*.—*Swift*.

Often with the notion of *loss* on the part of those on whom the expense falls, either from the *equivalent* being insufficient, or from some *damage* or *discredit* arising out of the transaction.

As a party man, his character stood lower than it deserved, chiefly from certain personal dislikes towards him; for, with the perhaps doubtful exception of his constant popularity at his party's expense on the two occasions already mentioned, and of the much more serious charge against him of betraying his party in the Carlton House negotiation of 1812, there can nothing be laid to his charge as inconsistent with the rules of the strictest party duty and honour.—*Lord Brougham, History*.

cal Sketches of Statesmen of the Reign of George III., Mr. Sheridan.

**Expensful. adj.** Costly; chargeable: (*Expensive* commoner).

Who will be troubled with a pettish girl?—  
I may be proud; and, in that view, *expensful*.  
—*Beaumont and Fletcher, The Pilgrim*.  
No part of structure is either more *expensful* than windows, or more ruinous.—*Sir H. Wotton, Elements of Architecture*.

**Expensfully. adv.** In an expensful manner; in a costly way; at great charge.

*Rare*.  
Where now is seen, with Camden, the fair habitation of Sir William Sidney, a learned knight, painfully and *expensfully* studious of the common good of his country.—*Waver, Ancient Funeral Monuments of Great Britain, Ireland, and Islands adjacent*, p. 316.

**Expensfulness. s.** Attribute suggested by *Expensful*. *Rare*.

This advantage the meaner sort generally want, the *expensfulness* of such a breeding sets it beyond their reach.—*Dr. H. More, Gentleman's Calling*, sect. 2, § 2. (Ord MS.)

**Expensless. adj.** Without expense or cost.  
A physician may save any army by this frugal and *expensless* means only.—*Milton, Tractate on Education*.

What health promotes, and gives unenvy'd peace,  
Is all *expensless*, and procur'd with ease.—*Sir E. Blackmore*.

**Expensive. adj.**

1. Given to expense; extravagant; luxurious.

Frugal and industrious men are friendly to the established government, as the idle and *expensive* are dangerous.—*Sir W. Temple*.

2. Costly (as, 'expensive dress,' 'an *expensive* journey'); requiring expenditure of any kind: (with of). *Obsolete*.

In these places where the officers of the church are not *expensive* of the whole day, it is lawful to do (upon just cause) any work that is now forbidden by our superior, or scandalous to our brethren.—*Jeremy Taylor, Doctor Dediturum*. (Ord MS.)

3. Liberal; generous; distributive.

This requires an active, *expensive*, indefatigable goodness, such as our apostle calls a work and labour of love.—*Bishop Sprat*.

**Expensively. adv.** In an expensive manner; with great expense; at great charge.

You know our court took the resolution, that it was the best way to dispatch the French prince back again quickly, to revive him solemnly, expensively, and *expensively*, when he loosed a domestic and durable entertainment.—*Donne, Letter in his Poems*, p. 279.

I never knew him live so great and *expensively* as he hath done since his return from exile.—*Swift*.

**Expensiveness. s.**

1. Addition to expense; extravagance.

The courtiers studied to please the king's taste; and gave into an *expensiveness* of equipage and dress, that exceeded all bounds.—*Bishop Louth, Life of Wycham*, p. 203.

2. Costliness.

Their highways, for their extent, solidity, or *expensiveness*, are some of the greatest monuments of the grandeur of the Roman empire.—*Archeol., Tables of ancient Coins, Weights, and Measures*.

**Expensable. adj.** [Lat. *spiro* = hope.] Capable of being hoped for, or expected; lying within the range of expectation. *Rare*.

If ever it was in being, it would have ever been divine, and not *expensable*.—*Christina, Religion's Appeal to the Bar of Reason*, p. 26. (Ord MS.)

**Expérience. s.** [Lat. *experientia* (Fr. *expérience*), from *experior* = try, make proof of; pres. part. *experiens*, *entis*; pret. part. *expertus*; *experimentum* = trial, proof, test.]

1. Practice; frequent trial.

Herod *expérience* hath informed reason, and time hath made those things apparent which were hidden.—*Sir H. Raleigh*.  
But apt the mind or fancy is to rove  
Uncheck'd, and of her roving is no end,  
Till warn'd, or by *expérience* taught, she learn,  
That not to know at large of things remote  
From use, obscure and subtle, but to know  
That which before us lies in daily life,  
Is the prime wisdom.—*Milton, Paradise Lost*, viii. 168.

2. Knowledge gained by trial and practice.  
Boys immature in knowledge,  
Pawn their *expérience* to their present pleasure.—*Shakespeare, Anthony and Cleopatra*, l. 4.

*Experience* is the daughter of time.—*Dr. H. More, Devout Christian Piety*, p. 104.  
But if you'll prosper, mark what I advise,  
Whom age and long experience render wise. *Pope*.  
The laws of mind . . . compose the universal or abstract portion of the philosophy of human nature; and all the truths of common experience, constituting a practical knowledge of mankind, must, to the extent to which they are truths, be results or consequences of these. Such familiar maxims, when collected a posteriori from observation of life, occupy among the truths of the science the place of what, in our analysis of induction, have so often been spoken of under the title of empirical laws. . . . The observations concerning human affairs collected from common experience, are precisely of this nature. Even if they were universally and exactly true within the bounds of experience, which they never are, still they are not the ultimate laws of human action; they are not the principles of human nature, but results of those principles under the circumstances in which mankind have happened to be placed. When the Philistines said in their wrath that all men are liars, he enumerated what liars were, and countries in which they were to be found; but it is not a law of man's nature to lie; though it is one of the consequences of the laws of human nature, that lying is nearly universal when certain external circumstances exist universally, especially circumstances productive of habitual distrust and fear. When the character of the old is ascertained to be cautious, and of the young impetuous, this, again, is but an empirical law; for it is not because of their youth that the young are impetuous, nor because of their age that the old are cautious. It is chiefly, if not wholly, because the old, during their many years of life, have generally had much experience of its various evils, and having suffered or seen others suffer much from imprudent exposure to them, have acquired associations . . . due to circumstances. While the young, as well from the absence of . . . far experience as from the greater strength of the impressions which urge them to enterprise, escape themselves in it more readily. Here, then, is the explanation of the empirical law: here are the conditions which ultimately determine whether the law holds good or not. *J. S. Mill, System of Logic*, b. i. ch. v. § 1.

### 3. Individual or particular instance of trial or observation.

Ordinarily all proverbs are very true, being certain brief sentences collected out of long and direct experience. *Shelton, Translation of Don Quixote*, p. 101.  
The like holds good with respect to the relation between sounds and vibrating objects which we learn only by a generalization of experience. *Herschel Spencer, Principles of Psychology*.

### Experience. n. a. Try; practise; know by practice. See Experiment.

This, according to the view entertained by Curtius, and by several other writers, both ancient and modern, would be the first indication of an unhappy change which was beginning to show itself in Alexander's character: an effect, either of his interrupted prosperity, or, as others have conceived, of the partial failure and disappointment which he had experienced in India.—*Thirlwall, History of Greece*, ch. liv.

### Experienced. part. adj. Provided with the data of, taught or made sagacious or skillful by, experience.

We must perfect, as much as we can, our ideas of the distinct species; or learn them from such as are used to that sort of things, and are experienced in them. *Locke*.

To him experience'd Nestor thus rejoind,  
O friend, what sorrows dark thou bring to mind!

### Experiencer. s. One who experiences: (in the following extract, Experimenter).

A curious experience I did admit, that the likeness of any object, if strongly enlightened, will appear to another in the eye of him that looks strongly and steadily upon it, till he is dazzled by it, even after he shall have turned his eyes from it.—*Sir E. Dight, Treatise on the Nature of India*.

### Experienc'd. adj. Having experience: (Experienced commoner).

Why is the prince, now ripe, and full experienc'd,  
Not made a door in the state?

*Beaumont and Fletcher, Cupid's Revenge*.

### Experiential. adj. Derived from experience; empirical: (as opposed to Necessary or Intuitive).

It is evident that this distinction of necessary and experiential truths involves the same antithesis which we have already considered—the antithesis of thoughts and things. Necessary truths are derived from our own thoughts; experiential truths are derived from our observation of things about us. The opposition of necessary and experiential truth is another aspect of the fundamental antithesis of philosophy.—*Wheaton, History of Scientific Ideas*, l. 27.

### Expériment. s.

#### 1. Trial or test of anything: something done in order to discover an uncertain or unknown effect.

That which sheweth them to be wise, is the gathering of principles out of their own particular experiments; and the framing of our particular experiments, according to the rule of their principles, shall make us such as they are. *Hooker, Ecclesiastical Polity*.

It is usual also not to try experiments in states, except the necessity be urgent, or the utility evident. *Bacon*.

Till his fall, man's mind was ignorant of nothing but of sin; or at least, it rested in the notion without the smart of the experiment. *South, Sermons*.

When we are searching out the nature or properties of any being by various methods of trial, this sort of observation is called experiment. *Watts, Improvement of the Mind*.

#### 2. Special act of experience.

Adam! by sad experiment I ken  
How little weight with thee my words can find.

*Milton, Paradise Lost*, x. 607.

To have had many experiments is what we call experience.—*Hobbes, On Human Nature*, ch. iv. § 2.

In the earlier writers, *experiment*, both as a noun and a verb, more closely coincided with *experience* than it does now. And that on good grounds. An *experiment*, at present, means a special observation in which the conditions are determined by the observer or experimenter, instead of one, which is taken as the ordinary course of nature presents it. To make this synonymous with the abstract *Experience* is inconvenient; but, on the other hand, it is exceptional to make the abstract *experience* serve for concrete instances, and become plural. Still, *experience* is the term which gains ground.

### Expériment. n. a.

#### 1. Try; search out by trial.

This naptha is an oily or fat liquid substance, in colour not unlike soft white clay; of quality hot and dry, so as it is said to inflame with the sulphur, or heat that issues from fire; as was most fully expériménted upon one of Alexander's jacks, who being mounted, with much ado escaped burning. *Sir T. Herbert, Relation of a new Years Travels into Africa and the Great Asia*, p. 182.

In the following extract it governs the sentence beginning with *that*.

Redd' expériménted, that no putrefied flesh will of it, if all insects be carefully kept from it, prod' any. *Rap, Vision of God manifest in the Works of the Creation*.

#### 2. Find out or know by experience. Rare.

These and many other spiritual wickednesses in high places doth the person fear, or expérimént, both. *St. Herbert, Country Parson*, ch. ix.

When the succession of ideas causes, our perception of duration is with it, which every experiments whilst it is sensually.—*Locke*.

### Expériment. n. a. Make experiment.

The plan to which I allude is, that when any subject becomes unmanageable by the inductive method, whether from the impossibility of expériménting upon it, or from its extreme natural complexity, or from the presence of immense and bewildering details collected around it, we may, in all such cases, make an imaginary separation of inseparable facts; and reason upon trains of events which have no real and independent existence, and which are nowhere to be found except in the mind of the inquirer.—*Buckle, History of Civilization in England*, vol. ii. ch. vi.

### Expérimental. adj. Pertaining to, built upon, or known by, experiment; formed by observation.

Trust not my reading, nor my observations,  
Which with expériméntal soul do warrant  
The tenour of my book.

*Shakespeare, Much Ado about Nothing*, iv. 1.

The expériméntal testimony of Gillius is most considerable of any, who beheld the course thereof. *Sir T. Browne, Vulgar Errors*.

We have no other evidence of universal impenetrability, besides a large experience, without an expériméntal exception. *Sir I. Newton, Opticks*.

These are so far from being subservient to atheism in their audacious attempts, that they rather afford an expériméntal confirmation of the universal delusion.—*Bentley, Sermons*.

Even in purely expériméntal science, some inducement is necessary for trying one experiment rather than another; and though it is abstractedly

possible that all the experiments which have been tried, might have been produced by the mere desire to ascertain what would happen in certain circumstances, without any previous conjecture as to the result; yet in point of fact those unobtrusive, delicate, and often cumbersome and tedious processes of experiment, which have thrown most light upon the general constitution of nature, would hardly ever have been undertaken by the persons or at the time they were, unless it had seemed to depend on them whether some general doctrine or theory which had been suggested, but not yet proved, should be admitted or not. If this be true even of merely expériméntal inquiry, the conversion of expériméntal into deductive truths could still less have been effected without three temporary assistance from hypotheses. *J. S. Mill, System of Logic*, § 5.

### Expérimentalist. s. One who makes experiments.

It was usual, we are told, with the expériméntalists in physics in the last age, to labour their experiments with the most diligent exactness. *Bishop Barrow, On the Divinity of Christ*, p. 21; 1700.

If a bird is taken from a cage, and instantly plunged into carbonic acid gas, the expériméntalist may be fully assured (at all events after one or two repetitions) that no circumstance capable of causing suffocation had supervened in the interim, except the change from immersion in the atmosphere to immersion in carbonic acid gas. *J. S. Mill, System of Logic*.

And moreover, in respect of the medical profession, there is an obvious danger of a man's being regarded as a dangerous expériméntalist who adopts any novelty, and of his thus losing practice even among such as may regard him with admiration as a philosopher.—*Whately, Elements of Rhetoric*, pt. i. ch. in. § 2.

### Expérimentally. adv. In an experimental manner; by experience; by trial; by experiment; by observation.

Solid divines expériméntally know what belongs to the healing of a sinful soul.—*Bishop Hall, Remains*, p. 110.

While Pharoah was an idle, the true distance between it and the city, as it hath been usually and expériméntally ascertained, was about seven furlongs. *Cicero, Tushum*, p. 23.

The miscarriage being sometimes universal, has made us impart what we have expériméntally learned by our own observations.—*Kelley, Calculations*, ch. i.

While the man is under the scourge of affliction, he is willing to adjure those sins which he now expériméntally finds attended with such bitter consequences.—*Rogers, Sermons*.

Paradise discovered by experiment that voltaic electricity could be evolved from a natural magnet, provided a conducting body were set in motion at right angles to the direction of the magnet; and, that he found to hold not only of small magnets, but of that great magnet, the earth. The law being thus established expériméntally, that electricity is evolved, by a magnet, and a conductor moving at right angles to the direction of its poles, we may now look out for fresh instances in which these conditions meet. *J. S. Mill, System of Logic*.

### Expérimentarian. adj. and s. Adept in experiments.

Another thing that disposes an expériméntarian philosopher to embrace religion is that his genius and course of studies accustom him to value and delight in abstracted truths. *Boyle, Works*, v. 22. (Rich.)

Another thing that qualifies an expériméntarian for the reception of revealed religion is, &c.—*Ibid.*, p. 237. (Rich.)

### Expérimentation. s. Exercise or practice in experiment.

Further, even if we could have ascertained, by the method of agreement, that oxygen and hydrogen were both present when water is produced, no expériméntation on oxygen and hydrogen separately, and knowledge of their laws, could have enabled us deductively to infer that they would produce water. We require a specific experiment on the two combined. *J. S. Mill, System of Logic*, b. iii. ch. x. § 4.

Thus far the advantages of expériméntation over simple observation is universally remembered: all are aware that it enables us to obtain innumerable combinations of circumstances which are not to be found in nature, and so add to nature's experiments a multitude of experiments of our own.—*Ibid.*, b. iii. ch. vii. § 3.

### Expérimentator. s. Experimenter.

The examination of some of them was protracted for many days, the nature of the expériménta themselves and also the design of the expériménta requiring such class.—*Boyle, Works*, iv. 207. (Rich.)

### Expérimented. part. adj. Experienced; tried. Obsolete.

tile, is converted into vapour and augments the ex-  
plosion.—*Sir I. Newton, Opticks.*

Exponent of the ratio, or proportion between any  
two numbers or quantities, is the exponent arising  
when the antecedent is divided by the consequent;  
thus six is the exponent of the ratio which thirty  
bath to live. Also a rank of numbers in arithmetical  
progression, beginning from 0, and placed over a  
rank of numbers in geometrical progression, are

dition and subtraction of these exponents answers  
to multiplication and division in the geometrical  
numbers.—*Harris.*

della, do, &c.—*R. B. R., Translation of Simoni's*

kidneys and ureters, serve for *expurgation*.—*Wac-*  
*man, Surgery.*

**2. Purification from bad mixture (as of error or falsehood).**

Wise men know, that arts and learning want  
*expurgation*; and if the course of truth be permitted

**Expurgatorial. adj.** Having the character of,  
relating to, or consisting in, an expurgation.  
Pascal refused to produce the murderers; he as-  
serted that they were guilty of no crime in putting  
to death men themselves guilty of treason; he secured  
them by throwing around them a half-sacred charac-

ter as servants of the Church of St. Peter. Himself he excommunicated by a solemn *excommunicatio* oath, before thirty bishops, from all participation in the deed.—*Milman, History of Latin Christianity*, b. v. ch. ii.

### Exspurgatorious. *adj.* Expurging.

It were hard if the freethinkers of England, with whom the voice of truth for these many years, even against the proverb, hath not been heard but in corners, after all your monkish prohibitions, and *exspurgatorious* indexes, your *quays* and *summits*.—*Milton, Animadversions upon a Defence of the Humble Remonstrance*.

### Exspurgatory. *adj.* Having the character of the Index Expurgatorius, a list of works condemned by the pope as either heretical or dangerous to the Roman Catholic faith. Of the foregoing, Exspurgatorious seems to have taken its form from the Latin. The commonest of the three forms is Expurgatorial.

#### b. In a bad sense.

Returning rich with plunder from the field,  
If cups of silver or of gold he brought,

And with the glittering spoil his horse adorn'd.

Nor do we find, that in the great pomp or princely parade used by queen Berenice and her train of women (among whom, no doubt, all the Roman and Asiatic fashions of improved beauty did appear, as St. Luke intimates), we find not the blessed apostle either at all taken or scandalized with that *exquisite*ness and glory.—*Jeremy Taylor, Artificial Happiness*, p. 82.

We suppose the superficial of the two phrases should be so exactly flat and smooth, that no air at all can come between them; and experience has informed us, that it is extremely difficult to procure from our ordinary tradesmen either classes or marble so much as approaching such an

—*Boyle*.

**Ex-** Over and above the remarks made on Ex- as a prefix, the present complication needs notice. It presents itself when the second element of any compound begins with the sound of *s*. As *ex* (*eks*) ends in this, two *ss* come together. Furthermore; *e* before a small vowel is sounded as *s*; hence *centre* preceded by *ce-* or *ex-* is in the same condition as if it were spelt *centre*. So is *se*; *scripte* being sounded as if written either *ceptre* or *septe*. To write these sounds of *s* in full has often been considered superfluous; the result being that, in many words, no difference is made between *ex-* followed with a vowel, and *ex* followed by *s*. This is the case when *ex-sudation* is spelt *ex-sulation*. As a matter of etymology, the latter form is, of course, objectionable. In practice, too, it has a tendency to prove mischievous. *Ex*, as a matter of pronunciation, is generally, when followed by a vowel, sounded as *e* + *g* + *z*. Nine men say *Alexander* for one who says *Alexander* (*Alexander*). Now, the spelling which encourages this is bad. Hence, in many cases, even when the examples go the other way, the entries in the present edition preserve the *s* wherever the custom of omitting it has not become too inveterate to be set aside, or the word be rare.

A better lover and much better poet.

—*B. Jonson, Underwoods*.

### Exséc. *v. a.* [Lat. *seclis*, pass. part. of *seco* = cut.] Cut out; cut away.

### Exsudation. *s.* Sweating out; emission.

If it hath more dew at noon than in the morning, then it seemeth to be an *exsudation* of the herb itself.—*Ibid.*

It may be wondered what should induce the people to build in this base manner, when they have, in the adjacent mountains, such plenty of good stone for nobler fabrics. I can give no reason for it, unless this may pass for such: that those who first planted here, finding so delicious a situation, were in haste to come to the enjoyment of it; and therefore nimbly set up those *extemporally* habitations, being unwilling to defer their pleasure so long, as whilst they might erect more magnificent structures; which primitive example their successors have followed ever since.—*Mandrell, Journey from Aleppo to Jerusalem, p. 125.*

**Extempore. adv.** [Lat. *ex*—out, *tempore*, the ablative singular of *tempus*—time; hence its literal meaning is *out of time*.]

Perhaps the *spur of the moment* is the best approximate translation of it, regard being had to the sense it bears in English. The extract from Dryden is simply a translation of *ex tempore vici*: just as the occasion prompts. It is a Latin rather than an English word; or rather it is a pair of words, like *a priori*, *a posteriori*, and others which can scarcely be dispensed with, and which, in English, we must treat as single words.

As a part of speech, *extempore* is, in the first instance, an adverb. Its use as an adjective is condemned by Johnson, who cites the authority of Addison only. The addition of that of Dryden is Todd's. The recognition of it as a substantive is Todd's. That it is all three is beyond doubt. For further remarks see the observations on Contemporary.]

Without premeditation; suddenly; readily; without any previous cure or preparation.

You may do it *extempore*; for it is but rearing.—*Shakespeare, Midsummer-Night's Dream, i. 2.*

Hast thou no mark at which to bend thy bow?

Or, like a boy, pursue the carrion-crow

With pellets and with stones from tree to tree,

A fruitless toil, and live *extempore*!

*Dryden, Persius's Satires.*

My regret when, under the most melancholy circumstances, I ascertained what had occurred was serious indeed; and my resolution never again to make acquaintances *extempore*, was coupled with the conviction that a practical joke is, in fact, no joke at all,—and yet, such is the influence of agreeable manners and lively conversation, that I only subsequently became my greatest friend, at least in the worldly acceptance of that most equivocal word.—*Thoreau Hook, Gilbert's Cursey, vol. I. ch. iv.*

**Extempore. adj.** Extemporaneous.

A sort of *extempore* poetry, or rather of tunable hobbling verse.—*Dryden, Origin and Progress of Satire.*

**Extend. v. a.**

1. Stretch out in any direction.

If these pieces were *extended* and stretched out in man, as they are in the world, man would be the giant and the world the dwarf, the world but the

Belies his features, nay *extends* his hands. *Pope.*

2. Amplify (opposed to *contract*); continue.

Hence, unless some such propositions can be established, no superseding of sciences is possible. This must remain true, whatever be the special character of the psychology to be developed. Is it realistic? Its argument may be taken in flank by a denial of the *externality* of things. If it be any elaboration of idealism, it takes for granted mind and personality, and is liable to sceptical criticism on these assumptions. was in early life to put the *extinguisher* upon a fine metaphor or dazzling expression—to reject, thus, however worthless, if it did but glare; and epithets, however superfluous, if they but sounded grand?—how hard it was to forget one's self, and to become sincerely intent upon the best, simplest, strongest, briefest mode of communicating what we deemed important truth to the minds of others?—*Whately, Elements of Rhetoric*, appendix AA.

If it be urged that this is assumed of course, and that it therefore is superfluous to note them, I cannot assent to this explanation of their absence; and seeing that 'forfeiter,' 'lapper,' 'thirster,' and other little-used words of the same formation, are introduced, there is at least an inconclivity in omitting these, as they have been omitted by tens and by hundreds. . . . **Extra.** [Lat.] A word often used both in composition and as an adjective, meaning over and above, extraordinary, or the like (as, 'extra work, extra pay,' &c.); or beyond (as, 'extrajudicial, extramundane,' &c.).

As, however, the quantity of iron required for ship building forms but a small part of the total quantity required for all purposes, the extra demand on the iron-makers can be nothing like so great in proportion as is the extra demand on the ship-builders. When it follows, that there will be much less tendency to an immediate enlargement of the iron-producing industry, the extra quantity will for some time be obtained by working extra hours.—*Robert Spencer, Instructions of Biology.*

Used substantially in expressions such as 'a charge for extras.' It may also be considered as an abbreviation of Extraordinary.

**Extractive.** *adj.* Capable of being extracted.

Mr. Gilbert has communicated to the publick the analysis of a fertile soil in the vicinity of Turin, where it rains yearly above 40 inches on the square foot. **Extractive.** *s.* In Chemistry. See example.

The older apothecaries used this term [extract] to designate the product of the evaporation of any vegetable juice, infusion, or decoction; whether the latter two were made with water, alcohol, or other; whence arose the distinction of aqueous, alcoholic, and ethereal extracts. Fourery made many discoveries upon these preparations, and supposed that they had all a common basis, which he called the extractive principle. But Chevreul and other chemists have since proved that this pretended principle is a heterogeneous and very variable compound. By the term extract, therefore, is now meant merely the whole of the soluble matters obtained from vegetables, reduced by careful evaporation to either a paste or solid consistence. The watery extracts, which are those most commonly made, are as various as the vegetables which yield them; some containing chiefly sugar or gum in great abundance, and are therefore innocent or inert; while others contain very energetic ingredients. The conduct of the evaporating heat is the capital point in the preparation of extracts.—*Enc. Dictionary of Arts, Manufactures, and Mines, Extract.*

**Extramundane.** *adj.* [Lat. *mundus*=world.] Beyond the verge of the material world.

and ecclesiastical powers; on the other hand were the Puritans, or extreme Protestants, whose principle in matters of discipline was little more or less than sheer negation of what had formerly prevailed, and who urged their own opinion both against a counter-opinion, equally entitled to respect, and against the authorities of the church sustained by those of the state. *Gladstone, The State in its Relations with the Church*, ch. vii.

(Ord MS.)

Whither by happy-footed furies held,  
At certain revolutions, all the damned  
Are brought; and feel by turns the bitter change  
Of fierce extremes, extremes by change more fierce:
